- **fluoranthene** (EC Number: 205-912-4, CAS Number: 206-44-0)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **pyrene** (EC Number: 204-927-3, CAS Number: 129-00-0)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 2014
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Skin Irrit. 2 H315 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

indeno[123-cd]pyrene (EC Number: 205-893-2, CAS Number: 193-39-5)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Carc. 2 H351

benzo[ghi]perylene (EC Number: 205-883-8, CAS Number: 191-24-2)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 28/02/2015
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 23 Jul 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

coronene (EC Number: 205-881-7, CAS Number: 191-07-1)

Description/Comments: Data from C&L Inventory Database; no entries in Registered Substances or Pesticides Properties databases; SDS: Sigma Aldrich, 1907/2006 compliant, dated 2012 - no entries; IARC – Group 3, not carcinogenic.
Data source:
http://clp-inventory.echa.europa.eu/SummaryOfClassAndLabelling.aspx?SubstanceID=17010&HarmOnly=no?fc=true&lang=en
Data source date: 16 Jun 2014
Hazard Statements: STOT SE 2 H371

ethylbenzene (EC Number: 202-849-4, CAS Number: 100-41-4)

CLP index number: 601-023-00-4
Description/Comments:
Data source: Commission Regulation (EU) No 605/2014 – 6th Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP6)
Additional Hazard Statement(s): Carc. 2 H351
Reason for additional Hazards Statement(s):
03 Jun 2015 - Carc. 2 H351 hazard statement sourced from: IARC Group 2B (77) 2000

polychlorobiphenyls; PCB (EC Number: 215-648-1, CAS Number: 1336-36-3)

CLP index number: 602-039-00-4
Description/Comments: Worst Case: IARC considers PCB Group 1; Carcinogenic to humans; POP specific threshold from ATP1 (Regulation 756/2010/EU) to POPs Regulation (Regulation 850/2004/EC). Where applicable, the calculation method laid down in European standards EN 12766-1 and EN 12766-2 shall be applied.
Data source: Regulation 1272/2008/EC - Classification, labelling and packaging of substances and mixtures. (CLP)
Additional Hazard Statement(s): Carc. 1A H350
Reason for additional Hazards Statement(s):
29 Sep 2015 - Carc. 1A H350 hazard statement sourced from: IARC Group 1 (23, Sup 7, 100C) 2012

pH (CAS Number: PH)

Description/Comments: Appendix C4
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: None.

salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex

CLP index number: 006-007-00-5
Description/Comments: Conversion factor based on a worst case compound: sodium cyanide
Data source: Commission Regulation (EC) No 790/2009 - 1st Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP1)
Additional Hazard Statement(s): EUH032 >= 0.2 %
Reason for additional Hazards Statement(s):
14 Dec 2015 - EUH032 >= 0.2 % hazard statement sourced from: WM3, Table C12.2

TPH (C6 to C40) petroleum group (CAS Number: TPH)

Description/Comments: Hazard statements taken from WM3 1st Edition 2015; Risk phrases: WM2 3rd Edition 2013
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: Flam. Liq. 3 H226 , Asp. Tox. 1 H304 , STOT RE 2 H373 , Muta. 1B H340 , Carc. 1B H350 , Repr. 2 H361d , Aquatic Chronic 2 H411

Appendix B: Rationale for selection of metal species

antimony {antimony compounds, with the exception of the tetroxide (Sb2O4), pentoxide (Sb2O5), trisulphide (Sb2S3), pentasulphide (Sb2S5) and those specified elsewhere in this Annex}

Worst case species based on risk phrases

arsenic {arsenic trioxide}

Worst case species based on Hazard Statement.

barium {barium sulfate}

conservative

cadmium {cadmium sulfide}

Worst case species based on Hazard Statements.

copper {copper(II) oxide}

Reasonable

chromium in chromium(III) compounds {chromium(III) oxide (worst case)}

oxide conversion factor included

chromium in chromium(VI) compounds {chromium(VI) oxide}

most conservative

lead {lead chromate}

Worst case species based on Hazard Statements.

mercury {mercury dichloride}

Worst case species based on Hazard Statements.

molybdenum {molybdenum(VI) oxide}

Worst case species based on Hazard Statements.

nickel {nickel dihydroxide}

Worst case species based on Hazard Statements.

selenium {selenium compounds with the exception of cadmium sulphoselenide and those specified elsewhere in this Annex}

Worst case species based on Hazard Statements.

zinc {zinc oxide}

Concentrations of chromium VI insufficient for zinc chormate to be present.

boron {diboron trioxide; boric oxide}

Reasonable

cyanides {salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex}

Worst case species

Appendix C: Version

HazWasteOnline Classification Engine: WM3 1st Edition v1.1, May 2018
HazWasteOnline Classification Engine Version: 2020.289.4500.8764 (15 Oct 2020)
HazWasteOnline Database: 2020.290.4501.8765 (16 Oct 2020)

This classification utilises the following guidance and legislation:
WM3 v1.1 - Waste Classification - 1st Edition v1.1 - May 2018
CLP Regulation - Regulation 1272/2008/EC of 16 December 2008
1st ATP - Regulation 790/2009/EC of 10 August 2009
2nd ATP - Regulation 286/2011/EC of 10 March 2011
3rd ATP - Regulation 618/2012/EU of 10 July 2012
4th ATP - Regulation 487/2013/EU of 8 May 2013
Correction to 1st ATP - Regulation 758/2013/EU of 7 August 2013
5th ATP - Regulation 944/2013/EU of 2 October 2013
6th ATP - Regulation 605/2014/EU of 5 June 2014
WFD Annex III replacement - Regulation 1357/2014/EU of 18 December 2014
Revised List of Wastes 2014 - Decision 2014/955/EU of 18 December 2014
7th ATP - Regulation 2015/1221/EU of 24 July 2015
8th ATP - Regulation (EU) 2016/918 of 19 May 2016
9th ATP - Regulation (EU) 2016/1179 of 19 July 2016
10th ATP - Regulation (EU) 2017/776 of 4 May 2017
HP14 amendment - Regulation (EU) 2017/997 of 8 June 2017
13th ATP - Regulation (EU) 2018/1480 of 4 October 2018
14th ATP - Regulation (EU) 2020/217 of 4 October 2019
15th ATP - Regulation (EU) 2020/1182 of 19 May 2020
POPs Regulation 2004 - Regulation 850/2004/EC of 29 April 2004
1st ATP to POPs Regulation - Regulation 756/2010/EU of 24 August 2010
2nd ATP to POPs Regulation - Regulation 757/2010/EU of 24 August 2010

Key

	User supplied data
	Determinand values ignored for classification, see column 'Conc. Not Used' for reason
	Determinand defined or amended by HazWasteOnline (see Appendix A)
	Speciated Deteminand - Unless the Determinand is Note 1, the Conversion Factor is used to calculate the compound concentration
<LOD	Below limit of detection
ND	Not detected
CLP: Note 1	Only the metal concentration has been used for classification

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations are too low to be considered flammable. There is no evidence of free draining.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.0294%)

Classification of sample: WS23-22/09/2020-1.00-2.00m

Hazardous Waste
Classified as **17 05 03 ***
in the List of Waste

Sample details

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations are too low to be considered flammable. There is no evidence of free draining.

Hazard Statements hit:

Flam. Liq. 2; H225 "Highly flammable liquid and vapour."

Because of determinand:

ethylbenzene: (conc.: 9.58e-07%)

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinands:

xylene: (conc.: 3.48e-06%)
TPH (C6 to C40) petroleum group: (conc.: 0.106%)

Classification of sample: WS23-22/09/2020-2.00-3.00m

Hazardous Waste
Classified as **17 05 03 ***
in the List of Waste

Sample details

Sample Name:
WS23-22/09/2020-2.00-3.00m
Moisture content:
10.2%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 03 * (Soil and stones containing hazardous substances)

Hazard properties

HP 7: Carcinogenic "waste which induces cancer or increases its incidence"

Hazard Statements hit:

Carc. 1B; H350 "May cause cancer [state route of exposure if it is conclusively proven that no other routes of exposure cause the hazard]."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.199%)

HP 11: Mutagenic "waste which may cause a mutation, that is a permanent change in the amount or structure of the genetic material in a cell"

Hazard Statements hit:

Muta. 1B; H340 "May cause genetic defects [state route of exposure if it is conclusively proven that no other routes of exposure cause the hazard]."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.199%)

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinands:

xylene: (conc.: 2.64e-06%)
TPH (C6 to C40) petroleum group: (conc.: 0.133%)

Classification of sample: WS08-22/09/2020-1.00-2.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Sample details

Sample Name:
WS08-22/09/2020-1.00-2.00m
Moisture content:
12.1%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 04 (Soil and stones other than those mentioned in 17 05 03)

Hazard properties

None identified

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations are too low to be considered flammable. There is no evidence of free draining.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.0143%)

Classification of sample: WS06-22/09/2020-1.00-2.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Key

	User supplied data
	Determinand values ignored for classification, see column 'Conc. Not Used' for reason
	Determinand defined or amended by HazWasteOnline (see Appendix A)
	Speciated Deteminand - Unless the Determinand is Note 1, the Conversion Factor is used to calculate the compound concentration
<LOD	Below limit of detection
ND	Not detected
CLP: Note 1	Only the metal concentration has been used for classification

Appendix A: Classifier defined and non CLP determinands

barium sulfate (EC Number: 231-784-4, CAS Number: 7727-43-7)

Conversion factor: 1.7
Description/Comments: No hazard statements
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/89983 Sigma Aldrich SDS dated 15/4/19
Data source date: 02 Apr 2020
Hazard Statements: None.

chromium(III) oxide (worst case) (EC Number: 215-160-9, CAS Number: 1308-38-9)

Conversion factor: 1.462
Description/Comments: Data from C&L Inventory Database
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/33806
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H332 , Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Resp. Sens. 1 H334 , Skin Sens. 1 H317 , Repr. 1B H360FD , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

acenaphthylene (EC Number: 205-917-1, CAS Number: 208-96-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H302 , Acute Tox. 1 H330 , Acute Tox. 1 H310 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315

acenaphthene (EC Number: 201-469-6, CAS Number: 83-32-9)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Aquatic Chronic 2 H411

fluorene (EC Number: 201-695-5, CAS Number: 86-73-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

phenanthrene (EC Number: 201-581-5, CAS Number: 85-01-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Carc. 2 H351 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Skin Irrit. 2 H315

anthracene (EC Number: 204-371-1, CAS Number: 120-12-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

fluoranthene (EC Number: 205-912-4, CAS Number: 206-44-0)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

pyrene (EC Number: 204-927-3, CAS Number: 129-00-0)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 2014
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Skin Irrit. 2 H315 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **indeno[123-cd]pyrene** (EC Number: 205-893-2, CAS Number: 193-39-5)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Carc. 2 H351

- **benzo[ghi]perylene** (EC Number: 205-883-8, CAS Number: 191-24-2)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 28/02/2015
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 23 Jul 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **coronene** (EC Number: 205-881-7, CAS Number: 191-07-1)

Description/Comments: Data from C&L Inventory Database; no entries in Registered Substances or Pesticides Properties databases; SDS: Sigma Aldrich, 1907/2006 compliant, dated 2012 - no entries; IARC – Group 3, not carcinogenic.
Data source:
http://clp-inventory.echa.europa.eu/SummaryOfClassAndLabelling.aspx?SubstanceID=17010&HarmOnly=no?fc=true&lang=en
Data source date: 16 Jun 2014
Hazard Statements: STOT SE 2 H371

- **ethylbenzene** (EC Number: 202-849-4, CAS Number: 100-41-4)

CLP index number: 601-023-00-4
Description/Comments:
Data source: Commission Regulation (EU) No 605/2014 – 6th Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP6)
Additional Hazard Statement(s): Carc. 2 H351
Reason for additional Hazards Statement(s):
03 Jun 2015 - Carc. 2 H351 hazard statement sourced from: IARC Group 2B (77) 2000

- **polychlorobiphenyls; PCB** (EC Number: 215-648-1, CAS Number: 1336-36-3)

CLP index number: 602-039-00-4
Description/Comments: Worst Case: IARC considers PCB Group 1; Carcinogenic to humans; POP specific threshold from ATP1 (Regulation 756/2010/EU) to POPs Regulation (Regulation 850/2004/EC). Where applicable, the calculation method laid down in European standards EN 12766-1 and EN 12766-2 shall be applied.
Data source: Regulation 1272/2008/EC - Classification, labelling and packaging of substances and mixtures. (CLP)
Additional Hazard Statement(s): Carc. 1A H350
Reason for additional Hazards Statement(s):
29 Sep 2015 - Carc. 1A H350 hazard statement sourced from: IARC Group 1 (23, Sup 7, 100C) 2012

- **pH** (CAS Number: PH)

Description/Comments: Appendix C4
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: None.

- **salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex**

CLP index number: 006-007-00-5
Description/Comments: Conversion factor based on a worst case compound: sodium cyanide
Data source: Commission Regulation (EC) No 790/2009 - 1st Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP1)
Additional Hazard Statement(s): EUH032 >= 0.2 %
Reason for additional Hazards Statement(s):
14 Dec 2015 - EUH032 >= 0.2 % hazard statement sourced from: WM3, Table C12.2

- **TPH (C6 to C40) petroleum group** (CAS Number: TPH)

Description/Comments: Hazard statements taken from WM3 1st Edition 2015; Risk phrases: WM2 3rd Edition 2013
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: Flam. Liq. 3 H226 , Asp. Tox. 1 H304 , STOT RE 2 H373 , Muta. 1B H340 , Carc. 1B H350 , Repr. 2 H361d , Aquatic Chronic 2 H411

Appendix B: Rationale for selection of metal species

antimony {antimony compounds, with the exception of the tetroxide (Sb2O4), pentoxide (Sb2O5), trisulphide (Sb2S3), pentasulphide (Sb2S5) and those specified elsewhere in this Annex}

Worst case species based on risk phrases

arsenic {arsenic trioxide}

Worst case species based on Hazard Statement.

barium {barium sulfate}

conservative

cadmium {cadmium sulfide}

Worst case species based on Hazard Statements.

copper {copper(II) oxide}

Reasonable

chromium in chromium(III) compounds {chromium(III) oxide (worst case)}

oxide conversion factor included

chromium in chromium(VI) compounds {chromium(VI) oxide}

most conservative

lead {lead chromate}

Worst case species based on Hazard Statements.

mercury {mercury dichloride}

Worst case species based on Hazard Statements.

molybdenum {molybdenum(VI) oxide}

Worst case species based on Hazard Statements.

nickel {nickel dihydroxide}

Worst case species based on Hazard Statements.

selenium {selenium compounds with the exception of cadmium sulphoselenide and those specified elsewhere in this Annex}

Worst case species based on Hazard Statements.

zinc {zinc oxide}

Concentrations of chromium VI insufficient for zinc chormate to be present.

boron {diboron trioxide; boric oxide}

Reasonable

cyanides {salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex}

Worst case species

Appendix C: Version

HazWasteOnline Classification Engine: WM3 1st Edition v1.1, May 2018
HazWasteOnline Classification Engine Version: 2020.276.4488.8743 (02 Oct 2020)
HazWasteOnline Database: 2020.276.4488.8743 (02 Oct 2020)

This classification utilises the following guidance and legislation:
WM3 v1.1 - Waste Classification - 1st Edition v1.1 - May 2018
CLP Regulation - Regulation 1272/2008/EC of 16 December 2008
1st ATP - Regulation 790/2009/EC of 10 August 2009
2nd ATP - Regulation 286/2011/EC of 10 March 2011
3rd ATP - Regulation 618/2012/EU of 10 July 2012
4th ATP - Regulation 487/2013/EU of 8 May 2013
Correction to 1st ATP - Regulation 758/2013/EU of 7 August 2013
5th ATP - Regulation 944/2013/EU of 2 October 2013
6th ATP - Regulation 605/2014/EU of 5 June 2014
WFD Annex III replacement - Regulation 1357/2014/EU of 18 December 2014
Revised List of Wastes 2014 - Decision 2014/955/EU of 18 December 2014
7th ATP - Regulation 2015/1221/EU of 24 July 2015
8th ATP - Regulation (EU) 2016/918 of 19 May 2016
9th ATP - Regulation (EU) 2016/1179 of 19 July 2016
10th ATP - Regulation (EU) 2017/776 of 4 May 2017
HP14 amendment - Regulation (EU) 2017/997 of 8 June 2017
13th ATP - Regulation (EU) 2018/1480 of 4 October 2018
14th ATP - Regulation (EU) 2020/217 of 4 October 2019
15th ATP - Regulation (EU) 2020/1182 of 19 May 2020
POPs Regulation 2004 - Regulation 850/2004/EC of 29 April 2004
1st ATP to POPs Regulation - Regulation 756/2010/EU of 24 August 2010
2nd ATP to POPs Regulation - Regulation 757/2010/EU of 24 August 2010

Key

	User supplied data
	Determinand values ignored for classification, see column 'Conc. Not Used' for reason
	Determinand defined or amended by HazWasteOnline (see Appendix A)
	Speciated Deteminand - Unless the Determinand is Note 1, the Conversion Factor is used to calculate the compound concentration
<LOD	Below limit of detection
ND	Not detected
CLP: Note 1	Only the metal concentration has been used for classification

Appendix A: Classifier defined and non CLP determinands

barium sulfate (EC Number: 231-784-4, CAS Number: 7727-43-7)

Conversion factor: 1.7
Description/Comments: No hazard statements
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/89983 Sigma Aldrich SDS dated 15/4/19
Data source date: 02 Apr 2020
Hazard Statements: None.

chromium(III) oxide (worst case) (EC Number: 215-160-9, CAS Number: 1308-38-9)

Conversion factor: 1.462
Description/Comments: Data from C&L Inventory Database
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/33806
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H332 , Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Resp. Sens. 1 H334 , Skin Sens. 1 H317 , Repr. 1B H360FD , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

acenaphthylene (EC Number: 205-917-1, CAS Number: 208-96-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H302 , Acute Tox. 1 H330 , Acute Tox. 1 H310 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315

acenaphthene (EC Number: 201-469-6, CAS Number: 83-32-9)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Aquatic Chronic 2 H411

fluorene (EC Number: 201-695-5, CAS Number: 86-73-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

phenanthrene (EC Number: 201-581-5, CAS Number: 85-01-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Carc. 2 H351 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Skin Irrit. 2 H315

anthracene (EC Number: 204-371-1, CAS Number: 120-12-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

fluoranthene (EC Number: 205-912-4, CAS Number: 206-44-0)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

pyrene (EC Number: 204-927-3, CAS Number: 129-00-0)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 2014
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Skin Irrit. 2 H315 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

indeno[123-cd]pyrene (EC Number: 205-893-2, CAS Number: 193-39-5)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Carc. 2 H351

benzo[ghi]perylene (EC Number: 205-883-8, CAS Number: 191-24-2)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 28/02/2015
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 23 Jul 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

coronene (EC Number: 205-881-7, CAS Number: 191-07-1)

Description/Comments: Data from C&L Inventory Database; no entries in Registered Substances or Pesticides Properties databases; SDS: Sigma Aldrich, 1907/2006 compliant, dated 2012 - no entries; IARC – Group 3, not carcinogenic.
Data source:
http://clp-inventory.echa.europa.eu/SummaryOfClassAndLabelling.aspx?SubstanceID=17010&HarmOnly=no?fc=true&lang=en
Data source date: 16 Jun 2014
Hazard Statements: STOT SE 2 H371

ethylbenzene (EC Number: 202-849-4, CAS Number: 100-41-4)

CLP index number: 601-023-00-4
Description/Comments:
Data source: Commission Regulation (EU) No 605/2014 – 6th Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP6)
Additional Hazard Statement(s): Carc. 2 H351
Reason for additional Hazards Statement(s):
03 Jun 2015 - Carc. 2 H351 hazard statement sourced from: IARC Group 2B (77) 2000

polychlorobiphenyls; PCB (EC Number: 215-648-1, CAS Number: 1336-36-3)

CLP index number: 602-039-00-4
Description/Comments: Worst Case: IARC considers PCB Group 1; Carcinogenic to humans; POP specific threshold from ATP1 (Regulation 756/2010/EU) to POPs Regulation (Regulation 850/2004/EC). Where applicable, the calculation method laid down in European standards EN 12766-1 and EN 12766-2 shall be applied.
Data source: Regulation 1272/2008/EC - Classification, labelling and packaging of substances and mixtures. (CLP)
Additional Hazard Statement(s): Carc. 1A H350
Reason for additional Hazards Statement(s):
29 Sep 2015 - Carc. 1A H350 hazard statement sourced from: IARC Group 1 (23, Sup 7, 100C) 2012

pH (CAS Number: PH)

Description/Comments: Appendix C4
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: None.

salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex

CLP index number: 006-007-00-5
Description/Comments: Conversion factor based on a worst case compound: sodium cyanide
Data source: Commission Regulation (EC) No 790/2009 - 1st Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP1)
Additional Hazard Statement(s): EUH032 >= 0.2 %
Reason for additional Hazards Statement(s):
14 Dec 2015 - EUH032 >= 0.2 % hazard statement sourced from: WM3, Table C12.2

TPH (C6 to C40) petroleum group (CAS Number: TPH)

Description/Comments: Hazard statements taken from WM3 1st Edition 2015; Risk phrases: WM2 3rd Edition 2013
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: Flam. Liq. 3 H226 , Asp. Tox. 1 H304 , STOT RE 2 H373 , Muta. 1B H340 , Carc. 1B H350 , Repr. 2 H361d , Aquatic Chronic 2 H411

Appendix B: Rationale for selection of metal species

antimony {antimony compounds, with the exception of the tetroxide (Sb2O4), pentoxide (Sb2O5), trisulphide (Sb2S3), pentasulphide (Sb2S5) and those specified elsewhere in this Annex}

Worst case species based on risk phrases

arsenic {arsenic trioxide}

Worst case species based on Hazard Statement.

barium {barium sulfate}

conservative

cadmium {cadmium sulfide}

Worst case species based on Hazard Statements.

copper {copper(II) oxide}

Reasonable

chromium in chromium(III) compounds {chromium(III) oxide (worst case)}

oxide conversion factor included

chromium in chromium(VI) compounds {chromium(VI) oxide}

most conservative

lead {lead chromate}

Worst case species based on Hazard Statements.

mercury {mercury dichloride}

Worst case species based on Hazard Statements.

molybdenum {molybdenum(VI) oxide}

Worst case species based on Hazard Statements.

nickel {nickel dihydroxide}

Worst case species based on Hazard Statements.

selenium {selenium compounds with the exception of cadmium sulphoselenide and those specified elsewhere in this Annex}

Worst case species based on Hazard Statements.

zinc {zinc oxide}

Concentrations of chromium VI insufficient for zinc chormate to be present.

boron {diboron trioxide; boric oxide}

Reasonable

cyanides {salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex}

Worst case species

Appendix C: Version

HazWasteOnline Classification Engine: WM3 1st Edition v1.1, May 2018
HazWasteOnline Classification Engine Version: 2020.276.4488.8743 (02 Oct 2020)
HazWasteOnline Database: 2020.276.4488.8743 (02 Oct 2020)

This classification utilises the following guidance and legislation:
WM3 v1.1 - Waste Classification - 1st Edition v1.1 - May 2018
CLP Regulation - Regulation 1272/2008/EC of 16 December 2008
1st ATP - Regulation 790/2009/EC of 10 August 2009
2nd ATP - Regulation 286/2011/EC of 10 March 2011
3rd ATP - Regulation 618/2012/EU of 10 July 2012
4th ATP - Regulation 487/2013/EU of 8 May 2013
Correction to 1st ATP - Regulation 758/2013/EU of 7 August 2013
5th ATP - Regulation 944/2013/EU of 2 October 2013
6th ATP - Regulation 605/2014/EU of 5 June 2014
WFD Annex III replacement - Regulation 1357/2014/EU of 18 December 2014
Revised List of Wastes 2014 - Decision 2014/955/EU of 18 December 2014
7th ATP - Regulation 2015/1221/EU of 24 July 2015
8th ATP - Regulation (EU) 2016/918 of 19 May 2016
9th ATP - Regulation (EU) 2016/1179 of 19 July 2016
10th ATP - Regulation (EU) 2017/776 of 4 May 2017
HP14 amendment - Regulation (EU) 2017/997 of 8 June 2017
13th ATP - Regulation (EU) 2018/1480 of 4 October 2018
14th ATP - Regulation (EU) 2020/217 of 4 October 2019
15th ATP - Regulation (EU) 2020/1182 of 19 May 2020
POPs Regulation 2004 - Regulation 850/2004/EC of 29 April 2004
1st ATP to POPs Regulation - Regulation 756/2010/EU of 24 August 2010
2nd ATP to POPs Regulation - Regulation 757/2010/EU of 24 August 2010

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.0104%)

Classification of sample: WS24-24/09/2020-0.80-1.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.0141%)

Classification of sample: WS28-24/09/2020-0.80-1.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Classification of sample: WS30-24/09/2020-1.00-2.00m

Hazardous Waste
Classified as **17 05 03 ***
in the List of Waste

Sample details

Sample Name:
WS30-24/09/2020-1.00-2.00m
Moisture content:
9.5%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 03 * (Soil and stones containing hazardous substances)

Hazard properties

HP 7: Carcinogenic "waste which induces cancer or increases its incidence"

Hazard Statements hit:

Carc. 1B; H350 "May cause cancer [state route of exposure if it is conclusively proven that no other routes of exposure cause the hazard]."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.203%)

HP 11: Mutagenic "waste which may cause a mutation, that is a permanent change in the amount or structure of the genetic material in a cell"

Hazard Statements hit:

Muta. 1B; H340 "May cause genetic defects [state route of exposure if it is conclusively proven that no other routes of exposure cause the hazard]."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.203%)

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 2; H225 "Highly flammable liquid and vapour."

Because of determinand:

ethylbenzene: (conc.: 2.26e-06%)

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinands:

xylene: (conc.: 0.00001%)
TPH (C6 to C40) petroleum group: (conc.: 0.203%)

Classification of sample: WS30-24/09/2020-3.00-3.40m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 2; H225 "Highly flammable liquid and vapour."

Because of determinand:

ethylbenzene: (conc.: 7.8e-07%)

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinands:

xylene: (conc.: 3.9e-06%)
TPH (C6 to C40) petroleum group: (conc.: 0.118%)

Classification of sample: WS34-25/09/2020-0.00-1.00m

Hazardous Waste

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 2; H225 "Highly flammable liquid and vapour."

Because of determinands:

ethylbenzene: (conc.: 0.00001%)
tert-butyl methyl ether; MTBE; 2-methoxy-2-methylpropane: (conc.: 8.19e-06%)

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinands:

xylene: (conc.: 0.00008%)
TPH (C6 to C40) petroleum group: (conc.: 0.456%)

Classification of sample: WS34-25/09/2020-1.00-2.00m

Hazardous Waste
Classified as **17 05 03 ***
in the List of Waste

Sample details

Sample Name:
WS34-25/09/2020-1.00-2.00m
Moisture content:
17%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 03 * (Soil and stones containing hazardous substances)

Hazard properties

HP 7: Carcinogenic "waste which induces cancer or increases its incidence"

Hazard Statements hit:

Carc. 1B; H350 "May cause cancer [state route of exposure if it is conclusively proven that no other routes of exposure cause the hazard]."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.455%)

HP 11: Mutagenic "waste which may cause a mutation, that is a permanent change in the amount or structure of the genetic material in a cell"

Hazard Statements hit:

Muta. 1B; H340 "May cause genetic defects [state route of exposure if it is conclusively proven that no other routes of exposure cause the hazard]."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.455%)

Classification of sample: WS34-25/09/2020-2.00-3.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Sample details

Sample Name:
WS34-25/09/2020-2.00-3.00m
Moisture content:
13.3%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 04 (Soil and stones other than those mentioned in 17 05 03)

Hazard properties

None identified

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 2; H225 "Highly flammable liquid and vapour."

Because of determinand:

tert-butyl methyl ether; MTBE; 2-methoxy-2-methylpropane: (conc.: 6.94e-07%)

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinands:

xylene: (conc.: 2.69e-06%)
TPH (C6 to C40) petroleum group: (conc.: 0.0885%)

Classification of sample: WS34-25/09/2020-3.00-3.40m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Key

	User supplied data
	Determinand values ignored for classification, see column 'Conc. Not Used' for reason
	Determinand defined or amended by HazWasteOnline (see Appendix A)
	Speciated Deteminand - Unless the Determinand is Note 1, the Conversion Factor is used to calculate the compound concentration
<LOD	Below limit of detection
ND	Not detected
CLP: Note 1	Only the metal concentration has been used for classification

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 2; H225 "Highly flammable liquid and vapour."

Because of determinand:

ethylbenzene: (conc.: 7.01e-07%)

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinands:

xylene: (conc.: 4.47e-06%)
TPH (C6 to C40) petroleum group: (conc.: 0.0184%)

Appendix A: Classifier defined and non CLP determinands

barium sulfate (EC Number: 231-784-4, CAS Number: 7727-43-7)

Conversion factor: 1.7
Description/Comments: No hazard statements
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/89983 Sigma Aldrich SDS dated 15/4/19
Data source date: 02 Apr 2020
Hazard Statements: None.

chromium(III) oxide (worst case) (EC Number: 215-160-9, CAS Number: 1308-38-9)

Conversion factor: 1.462
Description/Comments: Data from C&L Inventory Database
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/33806
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H332 , Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Resp. Sens. 1 H334 , Skin Sens. 1 H317 , Repr. 1B H360FD , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

acenaphthylene (EC Number: 205-917-1, CAS Number: 208-96-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H302 , Acute Tox. 1 H330 , Acute Tox. 1 H310 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315

acenaphthene (EC Number: 201-469-6, CAS Number: 83-32-9)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Aquatic Chronic 2 H411

fluorene (EC Number: 201-695-5, CAS Number: 86-73-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

phenanthrene (EC Number: 201-581-5, CAS Number: 85-01-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Carc. 2 H351 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Skin Irrit. 2 H315

anthracene (EC Number: 204-371-1, CAS Number: 120-12-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

fluoranthene (EC Number: 205-912-4, CAS Number: 206-44-0)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

pyrene (EC Number: 204-927-3, CAS Number: 129-00-0)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 2014
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Skin Irrit. 2 H315 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **indeno[123-cd]pyrene** (EC Number: 205-893-2, CAS Number: 193-39-5)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Carc. 2 H351

- **benzo[ghi]perylene** (EC Number: 205-883-8, CAS Number: 191-24-2)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 28/02/2015
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 23 Jul 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **coronene** (EC Number: 205-881-7, CAS Number: 191-07-1)

Description/Comments: Data from C&L Inventory Database; no entries in Registered Substances or Pesticides Properties databases; SDS: Sigma Aldrich, 1907/2006 compliant, dated 2012 - no entries; IARC – Group 3, not carcinogenic.
Data source:
http://clp-inventory.echa.europa.eu/SummaryOfClassAndLabelling.aspx?SubstanceID=17010&HarmOnly=no?fc=true&lang=en
Data source date: 16 Jun 2014
Hazard Statements: STOT SE 2 H371

- **ethylbenzene** (EC Number: 202-849-4, CAS Number: 100-41-4)

CLP index number: 601-023-00-4
Description/Comments:
Data source: Commission Regulation (EU) No 605/2014 – 6th Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP6)
Additional Hazard Statement(s): Carc. 2 H351
Reason for additional Hazards Statement(s):
03 Jun 2015 - Carc. 2 H351 hazard statement sourced from: IARC Group 2B (77) 2000

- **polychlorobiphenyls; PCB** (EC Number: 215-648-1, CAS Number: 1336-36-3)

CLP index number: 602-039-00-4
Description/Comments: Worst Case: IARC considers PCB Group 1; Carcinogenic to humans; POP specific threshold from ATP1 (Regulation 756/2010/EU) to POPs Regulation (Regulation 850/2004/EC). Where applicable, the calculation method laid down in European standards EN 12766-1 and EN 12766-2 shall be applied.
Data source: Regulation 1272/2008/EC - Classification, labelling and packaging of substances and mixtures. (CLP)
Additional Hazard Statement(s): Carc. 1A H350
Reason for additional Hazards Statement(s):
29 Sep 2015 - Carc. 1A H350 hazard statement sourced from: IARC Group 1 (23, Sup 7, 100C) 2012

- **pH** (CAS Number: PH)

Description/Comments: Appendix C4
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: None.

- **salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex**

CLP index number: 006-007-00-5
Description/Comments: Conversion factor based on a worst case compound: sodium cyanide
Data source: Commission Regulation (EC) No 790/2009 - 1st Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP1)
Additional Hazard Statement(s): EUH032 >= 0.2 %
Reason for additional Hazards Statement(s):
14 Dec 2015 - EUH032 >= 0.2 % hazard statement sourced from: WM3, Table C12.2

- **TPH (C6 to C40) petroleum group** (CAS Number: TPH)

Description/Comments: Hazard statements taken from WM3 1st Edition 2015; Risk phrases: WM2 3rd Edition 2013
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: Flam. Liq. 3 H226 , Asp. Tox. 1 H304 , STOT RE 2 H373 , Muta. 1B H340 , Carc. 1B H350 , Repr. 2 H361d , Aquatic Chronic 2 H411

Appendix B: Rationale for selection of metal species

antimony {antimony compounds, with the exception of the tetroxide (Sb2O4), pentoxide (Sb2O5), trisulphide (Sb2S3), pentasulphide (Sb2S5) and those specified elsewhere in this Annex}

Worst case species based on risk phrases

arsenic {arsenic trioxide}

Worst case species based on Hazard Statement.

barium {barium sulfate}

conservative

cadmium {cadmium sulfide}

Worst case species based on Hazard Statements.

copper {copper(II) oxide}

Reasonable

chromium in chromium(III) compounds {chromium(III) oxide (worst case)}

oxide conversion factor included

chromium in chromium(VI) compounds {chromium(VI) oxide}

most conservative

lead {lead chromate}

Worst case species based on Hazard Statements.

mercury {mercury dichloride}

Worst case species based on Hazard Statements.

molybdenum {molybdenum(VI) oxide}

Worst case species based on Hazard Statements.

nickel {nickel dihydroxide}

Worst case species based on Hazard Statements.

selenium {selenium compounds with the exception of cadmium sulphoselenide and those specified elsewhere in this Annex}

Worst case species based on Hazard Statements.

zinc {zinc oxide}

Concentrations of chromium VI insufficient for zinc chormate to be present.

boron {diboron trioxide; boric oxide}

Reasonable

cyanides {salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex}

Worst case species

Appendix C: Version

HazWasteOnline Classification Engine: WM3 1st Edition v1.1, May 2018
HazWasteOnline Classification Engine Version: 2020.289.4500.8764 (15 Oct 2020)
HazWasteOnline Database: 2020.290.4501.8765 (16 Oct 2020)

This classification utilises the following guidance and legislation:
WM3 v1.1 - Waste Classification - 1st Edition v1.1 - May 2018
CLP Regulation - Regulation 1272/2008/EC of 16 December 2008
1st ATP - Regulation 790/2009/EC of 10 August 2009
2nd ATP - Regulation 286/2011/EC of 10 March 2011
3rd ATP - Regulation 618/2012/EU of 10 July 2012
4th ATP - Regulation 487/2013/EU of 8 May 2013
Correction to 1st ATP - Regulation 758/2013/EU of 7 August 2013
5th ATP - Regulation 944/2013/EU of 2 October 2013
6th ATP - Regulation 605/2014/EU of 5 June 2014
WFD Annex III replacement - Regulation 1357/2014/EU of 18 December 2014
Revised List of Wastes 2014 - Decision 2014/955/EU of 18 December 2014
7th ATP - Regulation 2015/1221/EU of 24 July 2015
8th ATP - Regulation (EU) 2016/918 of 19 May 2016
9th ATP - Regulation (EU) 2016/1179 of 19 July 2016
10th ATP - Regulation (EU) 2017/776 of 4 May 2017
HP14 amendment - Regulation (EU) 2017/997 of 8 June 2017
13th ATP - Regulation (EU) 2018/1480 of 4 October 2018
14th ATP - Regulation (EU) 2020/217 of 4 October 2019
15th ATP - Regulation (EU) 2020/1182 of 19 May 2020
POPs Regulation 2004 - Regulation 850/2004/EC of 29 April 2004
1st ATP to POPs Regulation - Regulation 756/2010/EU of 24 August 2010
2nd ATP to POPs Regulation - Regulation 757/2010/EU of 24 August 2010

CLP: Note 1	Only the metal concentration has been used for classification

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 2; H225 "Highly flammable liquid and vapour."

Because of determinand:

benzene: (conc.: 7.13e-07%)

Classification of sample: WS 36-28/09/2020-0.0-1.0m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.0438%)

Classification of sample: WS 37-28/09/2020-0.08-1.0m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.0211%)

Classification of sample: WS 37-28/09/2020-0-0-1.0m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.0196%)

Classification of sample: WS 38-28/09/2020-2.0-3.0m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Key

	User supplied data
	Determinand values ignored for classification, see column 'Conc. Not Used' for reason
	Determinand defined or amended by HazWasteOnline (see Appendix A)
	Speciated Deteminand - Unless the Determinand is Note 1, the Conversion Factor is used to calculate the compound concentration
<LOD	Below limit of detection
ND	Not detected
CLP: Note 1	Only the metal concentration has been used for classification

Appendix A: Classifier defined and non CLP determinands

- **barium sulfate** (EC Number: 231-784-4, CAS Number: 7727-43-7)

Conversion factor: 1.7
Description/Comments: No hazard statements
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/89983 Sigma Aldrich SDS dated 15/4/19
Data source date: 02 Apr 2020
Hazard Statements: None.

- **chromium(III) oxide (worst case)** (EC Number: 215-160-9, CAS Number: 1308-38-9)

Conversion factor: 1.462
Description/Comments: Data from C&L Inventory Database
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/33806
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H332 , Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Resp. Sens. 1 H334 , Skin Sens. 1 H317 , Repr. 1B H360FD , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **acenaphthylene** (EC Number: 205-917-1, CAS Number: 208-96-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H302 , Acute Tox. 1 H330 , Acute Tox. 1 H310 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315

- **acenaphthene** (EC Number: 201-469-6, CAS Number: 83-32-9)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Aquatic Chronic 2 H411

- **fluorene** (EC Number: 201-695-5, CAS Number: 86-73-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **phenanthrene** (EC Number: 201-581-5, CAS Number: 85-01-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Carc. 2 H351 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Skin Irrit. 2 H315

- **anthracene** (EC Number: 204-371-1, CAS Number: 120-12-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **fluoranthene** (EC Number: 205-912-4, CAS Number: 206-44-0)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **pyrene** (EC Number: 204-927-3, CAS Number: 129-00-0)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 2014
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Skin Irrit. 2 H315 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

indeno[123-cd]pyrene (EC Number: 205-893-2, CAS Number: 193-39-5)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Carc. 2 H351

benzo[ghi]perylene (EC Number: 205-883-8, CAS Number: 191-24-2)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 28/02/2015
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 23 Jul 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

coronene (EC Number: 205-881-7, CAS Number: 191-07-1)

Description/Comments: Data from C&L Inventory Database; no entries in Registered Substances or Pesticides Properties databases; SDS: Sigma Aldrich, 1907/2006 compliant, dated 2012 - no entries; IARC – Group 3, not carcinogenic.
Data source:
http://clp-inventory.echa.europa.eu/SummaryOfClassAndLabelling.aspx?SubstanceID=17010&HarmOnly=no?fc=true&lang=en
Data source date: 16 Jun 2014
Hazard Statements: STOT SE 2 H371

ethylbenzene (EC Number: 202-849-4, CAS Number: 100-41-4)

CLP index number: 601-023-00-4
Description/Comments:
Data source: Commission Regulation (EU) No 605/2014 – 6th Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP6)
Additional Hazard Statement(s): Carc. 2 H351
Reason for additional Hazards Statement(s):
03 Jun 2015 - Carc. 2 H351 hazard statement sourced from: IARC Group 2B (77) 2000

polychlorobiphenyls; PCB (EC Number: 215-648-1, CAS Number: 1336-36-3)

CLP index number: 602-039-00-4
Description/Comments: Worst Case: IARC considers PCB Group 1; Carcinogenic to humans; POP specific threshold from ATP1 (Regulation 756/2010/EU) to POPs Regulation (Regulation 850/2004/EC). Where applicable, the calculation method laid down in European standards EN 12766-1 and EN 12766-2 shall be applied.
Data source: Regulation 1272/2008/EC - Classification, labelling and packaging of substances and mixtures. (CLP)
Additional Hazard Statement(s): Carc. 1A H350
Reason for additional Hazards Statement(s):
29 Sep 2015 - Carc. 1A H350 hazard statement sourced from: IARC Group 1 (23, Sup 7, 100C) 2012

pH (CAS Number: PH)

Description/Comments: Appendix C4
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: None.

salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex

CLP index number: 006-007-00-5
Description/Comments: Conversion factor based on a worst case compound: sodium cyanide
Data source: Commission Regulation (EC) No 790/2009 - 1st Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP1)
Additional Hazard Statement(s): EUH032 >= 0.2 %
Reason for additional Hazards Statement(s):
14 Dec 2015 - EUH032 >= 0.2 % hazard statement sourced from: WM3, Table C12.2

TPH (C6 to C40) petroleum group (CAS Number: TPH)

Description/Comments: Hazard statements taken from WM3 1st Edition 2015; Risk phrases: WM2 3rd Edition 2013
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: Flam. Liq. 3 H226 , Asp. Tox. 1 H304 , STOT RE 2 H373 , Muta. 1B H340 , Carc. 1B H350 , Repr. 2 H361d , Aquatic Chronic 2 H411

Appendix B: Rationale for selection of metal species

antimony {antimony compounds, with the exception of the tetroxide (Sb2O4), pentoxide (Sb2O5), trisulphide (Sb2S3), pentasulphide (Sb2S5) and those specified elsewhere in this Annex}

Worst case species based on risk phrases

arsenic {arsenic trioxide}

Worst case species based on Hazard Statement.

barium {barium sulfate}

conservative

cadmium {cadmium sulfide}

Worst case species based on Hazard Statements.

copper {copper(II) oxide}

Reasonable

chromium in chromium(III) compounds {chromium(III) oxide (worst case)}

oxide conversion factor included

chromium in chromium(VI) compounds {chromium(VI) oxide}

most conservative

lead {lead chromate}

Worst case species based on Hazard Statements.

mercury {mercury dichloride}

Worst case species based on Hazard Statements.

molybdenum {molybdenum(VI) oxide}

Worst case species based on Hazard Statements.

nickel {nickel dihydroxide}

Worst case species based on Hazard Statements.

selenium {selenium compounds with the exception of cadmium sulphoselenide and those specified elsewhere in this Annex}

Worst case species based on Hazard Statements.

zinc {zinc oxide}

Concentrations of chromium VI insufficient for zinc chormate to be present.

boron {diboron trioxide; boric oxide}

Reasonable

cyanides {salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex}

Worst case species

Appendix C: Version

HazWasteOnline Classification Engine: WM3 1st Edition v1.1, May 2018
HazWasteOnline Classification Engine Version: 2020.289.4500.8764 (15 Oct 2020)
HazWasteOnline Database: 2020.290.4501.8765 (16 Oct 2020)

This classification utilises the following guidance and legislation:
WM3 v1.1 - Waste Classification - 1st Edition v1.1 - May 2018
CLP Regulation - Regulation 1272/2008/EC of 16 December 2008
1st ATP - Regulation 790/2009/EC of 10 August 2009
2nd ATP - Regulation 286/2011/EC of 10 March 2011
3rd ATP - Regulation 618/2012/EU of 10 July 2012
4th ATP - Regulation 487/2013/EU of 8 May 2013
Correction to 1st ATP - Regulation 758/2013/EU of 7 August 2013
5th ATP - Regulation 944/2013/EU of 2 October 2013
6th ATP - Regulation 605/2014/EU of 5 June 2014
WFD Annex III replacement - Regulation 1357/2014/EU of 18 December 2014
Revised List of Wastes 2014 - Decision 2014/955/EU of 18 December 2014
7th ATP - Regulation 2015/1221/EU of 24 July 2015
8th ATP - Regulation (EU) 2016/918 of 19 May 2016
9th ATP - Regulation (EU) 2016/1179 of 19 July 2016
10th ATP - Regulation (EU) 2017/776 of 4 May 2017
HP14 amendment - Regulation (EU) 2017/997 of 8 June 2017
13th ATP - Regulation (EU) 2018/1480 of 4 October 2018
14th ATP - Regulation (EU) 2020/217 of 4 October 2019
15th ATP - Regulation (EU) 2020/1182 of 19 May 2020
POPs Regulation 2004 - Regulation 850/2004/EC of 29 April 2004
1st ATP to POPs Regulation - Regulation 756/2010/EU of 24 August 2010
2nd ATP to POPs Regulation - Regulation 757/2010/EU of 24 August 2010

Classification of sample: WS43-29/09/2020-0.00-1.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Sample details

Sample Name:
WS43-29/09/2020-0.00-1.00m
Moisture content:
13.2%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 04 (Soil and stones other than those mentioned in 17 05 03)

Hazard properties

None identified

Sample details

Sample Name:
WS43-29/09/2020-1.00-2.00m
Moisture content:
12.7%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 04 (Soil and stones other than those mentioned in 17 05 03)

Hazard properties

None identified

Determinands

Moisture content: 12.7% Wet Weight Moisture Correction applied (MC)

CLP: Note 1	Only the metal concentration has been used for classification

Appendix A: Classifier defined and non CLP determinands

- **barium sulfate** (EC Number: 231-784-4, CAS Number: 7727-43-7)

Conversion factor: 1.7
Description/Comments: No hazard statements
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/89983 Sigma Aldrich SDS dated 15/4/19
Data source date: 02 Apr 2020
Hazard Statements: None.

- **chromium(III) oxide (worst case)** (EC Number: 215-160-9, CAS Number: 1308-38-9)

Conversion factor: 1.462
Description/Comments: Data from C&L Inventory Database
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/33806
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H332 , Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Resp. Sens. 1 H334 , Skin Sens. 1 H317 , Repr. 1B H360FD , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **acenaphthylene** (EC Number: 205-917-1, CAS Number: 208-96-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H302 , Acute Tox. 1 H330 , Acute Tox. 1 H310 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315

- **acenaphthene** (EC Number: 201-469-6, CAS Number: 83-32-9)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Aquatic Chronic 2 H411

- **fluorene** (EC Number: 201-695-5, CAS Number: 86-73-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **phenanthrene** (EC Number: 201-581-5, CAS Number: 85-01-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Carc. 2 H351 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Skin Irrit. 2 H315

- **anthracene** (EC Number: 204-371-1, CAS Number: 120-12-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **fluoranthene** (EC Number: 205-912-4, CAS Number: 206-44-0)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **pyrene** (EC Number: 204-927-3, CAS Number: 129-00-0)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 2014
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Skin Irrit. 2 H315 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

indeno[123-cd]pyrene (EC Number: 205-893-2, CAS Number: 193-39-5)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Carc. 2 H351

benzo[ghi]perylene (EC Number: 205-883-8, CAS Number: 191-24-2)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 28/02/2015
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 23 Jul 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

coronene (EC Number: 205-881-7, CAS Number: 191-07-1)

Description/Comments: Data from C&L Inventory Database; no entries in Registered Substances or Pesticides Properties databases; SDS: Sigma Aldrich, 1907/2006 compliant, dated 2012 - no entries; IARC – Group 3, not carcinogenic.
Data source:
http://clp-inventory.echa.europa.eu/SummaryOfClassAndLabelling.aspx?SubstanceID=17010&HarmOnly=no?fc=true&lang=en
Data source date: 16 Jun 2014
Hazard Statements: STOT SE 2 H371

ethylbenzene (EC Number: 202-849-4, CAS Number: 100-41-4)

CLP index number: 601-023-00-4
Description/Comments:
Data source: Commission Regulation (EU) No 605/2014 – 6th Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP6)
Additional Hazard Statement(s): Carc. 2 H351
Reason for additional Hazards Statement(s):
03 Jun 2015 - Carc. 2 H351 hazard statement sourced from: IARC Group 2B (77) 2000

polychlorobiphenyls; PCB (EC Number: 215-648-1, CAS Number: 1336-36-3)

CLP index number: 602-039-00-4
Description/Comments: Worst Case: IARC considers PCB Group 1; Carcinogenic to humans; POP specific threshold from ATP1 (Regulation 756/2010/EU) to POPs Regulation (Regulation 850/2004/EC). Where applicable, the calculation method laid down in European standards EN 12766-1 and EN 12766-2 shall be applied.
Data source: Regulation 1272/2008/EC - Classification, labelling and packaging of substances and mixtures. (CLP)
Additional Hazard Statement(s): Carc. 1A H350
Reason for additional Hazards Statement(s):
29 Sep 2015 - Carc. 1A H350 hazard statement sourced from: IARC Group 1 (23, Sup 7, 100C) 2012

pH (CAS Number: PH)

Description/Comments: Appendix C4
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: None.

salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex

CLP index number: 006-007-00-5
Description/Comments: Conversion factor based on a worst case compound: sodium cyanide
Data source: Commission Regulation (EC) No 790/2009 - 1st Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP1)
Additional Hazard Statement(s): EUH032 >= 0.2 %
Reason for additional Hazards Statement(s):
14 Dec 2015 - EUH032 >= 0.2 % hazard statement sourced from: WM3, Table C12.2

TPH (C6 to C40) petroleum group (CAS Number: TPH)

Description/Comments: Hazard statements taken from WM3 1st Edition 2015; Risk phrases: WM2 3rd Edition 2013
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: Flam. Liq. 3 H226 , Asp. Tox. 1 H304 , STOT RE 2 H373 , Muta. 1B H340 , Carc. 1B H350 , Repr. 2 H361d , Aquatic Chronic 2 H411

Appendix B: Rationale for selection of metal species

antimony {antimony compounds, with the exception of the tetroxide (Sb2O4), pentoxide (Sb2O5), trisulphide (Sb2S3), pentasulphide (Sb2S5) and those specified elsewhere in this Annex}

Worst case species based on risk phrases

arsenic {arsenic trioxide}

Worst case species based on Hazard Statement.

barium {barium sulfate}

conservative

cadmium {cadmium sulfide}

Worst case species based on Hazard Statements.

copper {copper(II) oxide}

Reasonable

chromium in chromium(III) compounds {chromium(III) oxide (worst case)}

oxide conversion factor included

chromium in chromium(VI) compounds {chromium(VI) oxide}

most conservative

lead {lead chromate}

Worst case species based on Hazard Statements.

mercury {mercury dichloride}

Worst case species based on Hazard Statements.

molybdenum {molybdenum(VI) oxide}

Worst case species based on Hazard Statements.

nickel {nickel dihydroxide}

Worst case species based on Hazard Statements.

selenium {selenium compounds with the exception of cadmium sulphoselenide and those specified elsewhere in this Annex}

Worst case species based on Hazard Statements.

zinc {zinc oxide}

Concentrations of chromium VI insufficient for zinc chormate to be present.

boron {diboron trioxide; boric oxide}

Reasonable

cyanides {salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex}

Worst case species

Appendix C: Version

HazWasteOnline Classification Engine: WM3 1st Edition v1.1, May 2018
HazWasteOnline Classification Engine Version: 2020.289.4500.8764 (15 Oct 2020)
HazWasteOnline Database: 2020.290.4501.8765 (16 Oct 2020)

This classification utilises the following guidance and legislation:
WM3 v1.1 - Waste Classification - 1st Edition v1.1 - May 2018
CLP Regulation - Regulation 1272/2008/EC of 16 December 2008
1st ATP - Regulation 790/2009/EC of 10 August 2009
2nd ATP - Regulation 286/2011/EC of 10 March 2011
3rd ATP - Regulation 618/2012/EU of 10 July 2012
4th ATP - Regulation 487/2013/EU of 8 May 2013
Correction to 1st ATP - Regulation 758/2013/EU of 7 August 2013
5th ATP - Regulation 944/2013/EU of 2 October 2013
6th ATP - Regulation 605/2014/EU of 5 June 2014
WFD Annex III replacement - Regulation 1357/2014/EU of 18 December 2014
Revised List of Wastes 2014 - Decision 2014/955/EU of 18 December 2014
7th ATP - Regulation 2015/1221/EU of 24 July 2015
8th ATP - Regulation (EU) 2016/918 of 19 May 2016
9th ATP - Regulation (EU) 2016/1179 of 19 July 2016
10th ATP - Regulation (EU) 2017/776 of 4 May 2017
HP14 amendment - Regulation (EU) 2017/997 of 8 June 2017
13th ATP - Regulation (EU) 2018/1480 of 4 October 2018
14th ATP - Regulation (EU) 2020/217 of 4 October 2019
15th ATP - Regulation (EU) 2020/1182 of 19 May 2020
POPs Regulation 2004 - Regulation 850/2004/EC of 29 April 2004
1st ATP to POPs Regulation - Regulation 756/2010/EU of 24 August 2010
2nd ATP to POPs Regulation - Regulation 757/2010/EU of 24 August 2010

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.0106%)

Classification of sample: WS 45-30/09/2020-1.0-2.0m

Non Hazardous Waste
Classified as **17 05 04**

Classification of sample: WS 47-30/09/2020-0.8-1.0m

Hazardous Waste
Classified as **17 05 03 ***
in the List of Waste

Sample details

Sample Name:
WS 47-30/09/2020-0.8-1.0m
Moisture content:
17.2%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 03 * (Soil and stones containing hazardous substances)

Hazard properties

HP 7: Carcinogenic "waste which induces cancer or increases its incidence"

Hazard Statements hit:

Carc. 1B; H350 "May cause cancer [state route of exposure if it is conclusively proven that no other routes of exposure cause the hazard]."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.272%)

HP 11: Mutagenic "waste which may cause a mutation, that is a permanent change in the amount or structure of the genetic material in a cell"

Hazard Statements hit:

Muta. 1B; H340 "May cause genetic defects [state route of exposure if it is conclusively proven that no other routes of exposure cause the hazard]."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.272%)

Key

	User supplied data
	Determinand values ignored for classification, see column 'Conc. Not Used' for reason
	Determinand defined or amended by HazWasteOnline (see Appendix A)
	Speciated Deteminand - Unless the Determinand is Note 1, the Conversion Factor is used to calculate the compound concentration
<LOD	Below limit of detection
ND	Not detected
CLP: Note 1	Only the metal concentration has been used for classification

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.00897%)

Appendix A: Classifier defined and non CLP determinands

barium sulfate (EC Number: 231-784-4, CAS Number: 7727-43-7)

Conversion factor: 1.7
Description/Comments: No hazard statements
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/89983 Sigma Aldrich SDS dated 15/4/19
Data source date: 02 Apr 2020
Hazard Statements: None.

chromium(III) oxide (worst case) (EC Number: 215-160-9, CAS Number: 1308-38-9)

Conversion factor: 1.462
Description/Comments: Data from C&L Inventory Database
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/33806
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H332 , Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Resp. Sens. 1 H334 , Skin Sens. 1 H317 , Repr. 1B H360FD , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

acenaphthylene (EC Number: 205-917-1, CAS Number: 208-96-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H302 , Acute Tox. 1 H330 , Acute Tox. 1 H310 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315

acenaphthene (EC Number: 201-469-6, CAS Number: 83-32-9)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Aquatic Chronic 2 H411

fluorene (EC Number: 201-695-5, CAS Number: 86-73-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

phenanthrene (EC Number: 201-581-5, CAS Number: 85-01-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Carc. 2 H351 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Skin Irrit. 2 H315

anthracene (EC Number: 204-371-1, CAS Number: 120-12-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

fluoranthene (EC Number: 205-912-4, CAS Number: 206-44-0)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

pyrene (EC Number: 204-927-3, CAS Number: 129-00-0)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 2014
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015

- **indeno[123-cd]pyrene** (EC Number: 205-893-2, CAS Number: 193-39-5)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Carc. 2 H351

- **benzo[ghi]perylene** (EC Number: 205-883-8, CAS Number: 191-24-2)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 28/02/2015
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 23 Jul 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **coronene** (EC Number: 205-881-7, CAS Number: 191-07-1)

Description/Comments: Data from C&L Inventory Database; no entries in Registered Substances or Pesticides Properties databases; SDS: Sigma Aldrich, 1907/2006 compliant, dated 2012 - no entries; IARC – Group 3, not carcinogenic.
Data source:
http://clp-inventory.echa.europa.eu/SummaryOfClassAndLabelling.aspx?SubstanceID=17010&HarmOnly=no?fc=true&lang=en
Data source date: 16 Jun 2014
Hazard Statements: STOT SE 2 H371

- **ethylbenzene** (EC Number: 202-849-4, CAS Number: 100-41-4)

CLP index number: 601-023-00-4
Description/Comments:
Data source: Commission Regulation (EU) No 605/2014 – 6th Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP6)
Additional Hazard Statement(s): Carc. 2 H351
Reason for additional Hazards Statement(s):
03 Jun 2015 - Carc. 2 H351 hazard statement sourced from: IARC Group 2B (77) 2000

- **polychlorobiphenyls; PCB** (EC Number: 215-648-1, CAS Number: 1336-36-3)

CLP index number: 602-039-00-4
Description/Comments: Worst Case: IARC considers PCB Group 1; Carcinogenic to humans; POP specific threshold from ATP1 (Regulation 756/2010/EU) to POPs Regulation (Regulation 850/2004/EC). Where applicable, the calculation method laid down in European standards EN 12766-1 and EN 12766-2 shall be applied.
Data source: Regulation 1272/2008/EC - Classification, labelling and packaging of substances and mixtures. (CLP)
Additional Hazard Statement(s): Carc. 1A H350
Reason for additional Hazards Statement(s):
29 Sep 2015 - Carc. 1A H350 hazard statement sourced from: IARC Group 1 (23, Sup 7, 100C) 2012

- **pH** (CAS Number: PH)

Description/Comments: Appendix C4
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: None.

- **salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex**

CLP index number: 006-007-00-5
Description/Comments: Conversion factor based on a worst case compound: sodium cyanide
Data source: Commission Regulation (EC) No 790/2009 - 1st Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP1)
Additional Hazard Statement(s): EUH032 >= 0.2 %
Reason for additional Hazards Statement(s):
14 Dec 2015 - EUH032 >= 0.2 % hazard statement sourced from: WM3, Table C12.2

- **TPH (C6 to C40) petroleum group** (CAS Number: TPH)

Description/Comments: Hazard statements taken from WM3 1st Edition 2015; Risk phrases: WM2 3rd Edition 2013
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: Flam. Liq. 3 H226 , Asp. Tox. 1 H304 , STOT RE 2 H373 , Muta. 1B H340 , Carc. 1B H350 , Repr. 2 H361d , Aquatic Chronic 2 H411

Appendix B: Rationale for selection of metal species

antimony {antimony compounds, with the exception of the tetroxide (Sb2O4), pentoxide (Sb2O5), trisulphide (Sb2S3), pentasulphide (Sb2S5) and those specified elsewhere in this Annex}

Worst case species based on risk phrases

arsenic {arsenic trioxide}

Worst case species based on Hazard Statement.

barium {barium sulfate}

conservative

cadmium {cadmium sulfide}

Worst case species based on Hazard Statements.

copper {copper(II) oxide}

Reasonable

chromium in chromium(III) compounds {chromium(III) oxide (worst case)}

oxide conversion factor included

chromium in chromium(VI) compounds {chromium(VI) oxide}

most conservative

lead {lead chromate}

Worst case species based on Hazard Statements.

mercury {mercury dichloride}

Worst case species based on Hazard Statements.

molybdenum {molybdenum(VI) oxide}

Worst case species based on Hazard Statements.

nickel {nickel dihydroxide}

Worst case species based on Hazard Statements.

selenium {selenium compounds with the exception of cadmium sulphoselenide and those specified elsewhere in this Annex}

Worst case species based on Hazard Statements.

zinc {zinc oxide}

Concentrations of chromium VI insufficient for zinc chormate to be present.

boron {diboron trioxide; boric oxide}

Reasonable

cyanides {salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex}

Worst case species

Appendix C: Version

HazWasteOnline Classification Engine: WM3 1st Edition v1.1, May 2018
HazWasteOnline Classification Engine Version: 2020.289.4500.8764 (15 Oct 2020)
HazWasteOnline Database: 2020.290.4501.8765 (16 Oct 2020)

This classification utilises the following guidance and legislation:
WM3 v1.1 - Waste Classification - 1st Edition v1.1 - May 2018
CLP Regulation - Regulation 1272/2008/EC of 16 December 2008
1st ATP - Regulation 790/2009/EC of 10 August 2009
2nd ATP - Regulation 286/2011/EC of 10 March 2011
3rd ATP - Regulation 618/2012/EU of 10 July 2012
4th ATP - Regulation 487/2013/EU of 8 May 2013
Correction to 1st ATP - Regulation 758/2013/EU of 7 August 2013
5th ATP - Regulation 944/2013/EU of 2 October 2013
6th ATP - Regulation 605/2014/EU of 5 June 2014
WFD Annex III replacement - Regulation 1357/2014/EU of 18 December 2014
Revised List of Wastes 2014 - Decision 2014/955/EU of 18 December 2014
7th ATP - Regulation 2015/1221/EU of 24 July 2015
8th ATP - Regulation (EU) 2016/918 of 19 May 2016
9th ATP - Regulation (EU) 2016/1179 of 19 July 2016
10th ATP - Regulation (EU) 2017/776 of 4 May 2017
HP14 amendment - Regulation (EU) 2017/997 of 8 June 2017
13th ATP - Regulation (EU) 2018/1480 of 4 October 2018
14th ATP - Regulation (EU) 2020/217 of 4 October 2019
15th ATP - Regulation (EU) 2020/1182 of 19 May 2020
POPs Regulation 2004 - Regulation 850/2004/EC of 29 April 2004
1st ATP to POPs Regulation - Regulation 756/2010/EU of 24 August 2010
2nd ATP to POPs Regulation - Regulation 757/2010/EU of 24 August 2010

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.0146%)

Classification of sample: WS50-01/10/2020-0.00-1.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 2; H225 "Highly flammable liquid and vapour."

Because of determinand:

benzene: (conc.: 1.16e-06%)

Classification of sample: WS48-01/10/2020-0.80-1.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Classification of sample: WS49-01/10/2020-0.00-0.90m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Sample details

Sample Name:
WS49-01/10/2020-0.00-0.90m
Moisture content:
11.7%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 04 (Soil and stones other than those mentioned in 17 05 03)

Hazard properties

None identified

Appendix A: Classifier defined and non CLP determinands

barium sulfate (EC Number: 231-784-4, CAS Number: 7727-43-7)

Conversion factor: 1.7
Description/Comments: No hazard statements
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/89983 Sigma Aldrich SDS dated 15/4/19
Data source date: 02 Apr 2020
Hazard Statements: None.

chromium(III) oxide (worst case) (EC Number: 215-160-9, CAS Number: 1308-38-9)

Conversion factor: 1.462
Description/Comments: Data from C&L Inventory Database
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/33806
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H332 , Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Resp. Sens. 1 H334 , Skin Sens. 1 H317 , Repr. 1B H360FD , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

acenaphthylene (EC Number: 205-917-1, CAS Number: 208-96-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H302 , Acute Tox. 1 H330 , Acute Tox. 1 H310 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315

acenaphthene (EC Number: 201-469-6, CAS Number: 83-32-9)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Aquatic Chronic 2 H411

fluorene (EC Number: 201-695-5, CAS Number: 86-73-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

phenanthrene (EC Number: 201-581-5, CAS Number: 85-01-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Carc. 2 H351 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Skin Irrit. 2 H315

anthracene (EC Number: 204-371-1, CAS Number: 120-12-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

fluoranthene (EC Number: 205-912-4, CAS Number: 206-44-0)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

pyrene (EC Number: 204-927-3, CAS Number: 129-00-0)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 2014
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Skin Irrit. 2 H315 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **indeno[123-cd]pyrene** (EC Number: 205-893-2, CAS Number: 193-39-5)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Carc. 2 H351

- **benzo[ghi]perylene** (EC Number: 205-883-8, CAS Number: 191-24-2)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 28/02/2015
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 23 Jul 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **coronene** (EC Number: 205-881-7, CAS Number: 191-07-1)

Description/Comments: Data from C&L Inventory Database; no entries in Registered Substances or Pesticides Properties databases; SDS: Sigma Aldrich, 1907/2006 compliant, dated 2012 - no entries; IARC – Group 3, not carcinogenic.
Data source:
http://clp-inventory.echa.europa.eu/SummaryOfClassAndLabelling.aspx?SubstanceID=17010&HarmOnly=no?fc=true&lang=en
Data source date: 16 Jun 2014
Hazard Statements: STOT SE 2 H371

- **ethylbenzene** (EC Number: 202-849-4, CAS Number: 100-41-4)

CLP index number: 601-023-00-4
Description/Comments:
Data source: Commission Regulation (EU) No 605/2014 – 6th Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP6)
Additional Hazard Statement(s): Carc. 2 H351
Reason for additional Hazards Statement(s):
03 Jun 2015 - Carc. 2 H351 hazard statement sourced from: IARC Group 2B (77) 2000

- **polychlorobiphenyls; PCB** (EC Number: 215-648-1, CAS Number: 1336-36-3)

CLP index number: 602-039-00-4
Description/Comments: Worst Case: IARC considers PCB Group 1; Carcinogenic to humans; POP specific threshold from ATP1 (Regulation 756/2010/EU) to POPs Regulation (Regulation 850/2004/EC). Where applicable, the calculation method laid down in European standards EN 12766-1 and EN 12766-2 shall be applied.
Data source: Regulation 1272/2008/EC - Classification, labelling and packaging of substances and mixtures. (CLP)
Additional Hazard Statement(s): Carc. 1A H350
Reason for additional Hazards Statement(s):
29 Sep 2015 - Carc. 1A H350 hazard statement sourced from: IARC Group 1 (23, Sup 7, 100C) 2012

- **pH** (CAS Number: PH)

Description/Comments: Appendix C4
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: None.

- **salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex**

CLP index number: 006-007-00-5
Description/Comments: Conversion factor based on a worst case compound: sodium cyanide
Data source: Commission Regulation (EC) No 790/2009 - 1st Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP1)
Additional Hazard Statement(s): EUH032 >= 0.2 %
Reason for additional Hazards Statement(s):
14 Dec 2015 - EUH032 >= 0.2 % hazard statement sourced from: WM3, Table C12.2

- **TPH (C6 to C40) petroleum group** (CAS Number: TPH)

Description/Comments: Hazard statements taken from WM3 1st Edition 2015; Risk phrases: WM2 3rd Edition 2013
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: Flam. Liq. 3 H226 , Asp. Tox. 1 H304 , STOT RE 2 H373 , Muta. 1B H340 , Carc. 1B H350 , Repr. 2 H361d , Aquatic Chronic 2 H411

Appendix B: Rationale for selection of metal species

antimony {antimony compounds, with the exception of the tetroxide (Sb2O4), pentoxide (Sb2O5), trisulphide (Sb2S3), pentasulphide (Sb2S5) and those specified elsewhere in this Annex}

Worst case species based on risk phrases

arsenic {arsenic trioxide}

Worst case species based on Hazard Statement.

barium {barium sulfate}

conservative

cadmium {cadmium sulfide}

Worst case species based on Hazard Statements.

copper {copper(II) oxide}

Reasonable

chromium in chromium(III) compounds {chromium(III) oxide (worst case)}

oxide conversion factor included

chromium in chromium(VI) compounds {chromium(VI) oxide}

most conservative

lead {lead chromate}

Worst case species based on Hazard Statements.

mercury {mercury dichloride}

Worst case species based on Hazard Statements.

molybdenum {molybdenum(VI) oxide}

Worst case species based on Hazard Statements.

nickel {nickel dihydroxide}

Worst case species based on Hazard Statements.

selenium {selenium compounds with the exception of cadmium sulphoselenide and those specified elsewhere in this Annex}

Worst case species based on Hazard Statements.

zinc {zinc oxide}

Concentrations of chromium VI insufficient for zinc chormate to be present.

boron {diboron trioxide; boric oxide}

Reasonable

cyanides {salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex}

Worst case species

Appendix C: Version

HazWasteOnline Classification Engine: WM3 1st Edition v1.1, May 2018
HazWasteOnline Classification Engine Version: 2020.310.4521.8789 (05 Nov 2020)
HazWasteOnline Database: 2020.310.4521.8789 (05 Nov 2020)

This classification utilises the following guidance and legislation:
WM3 v1.1 - Waste Classification - 1st Edition v1.1 - May 2018
CLP Regulation - Regulation 1272/2008/EC of 16 December 2008
1st ATP - Regulation 790/2009/EC of 10 August 2009
2nd ATP - Regulation 286/2011/EC of 10 March 2011
3rd ATP - Regulation 618/2012/EU of 10 July 2012
4th ATP - Regulation 487/2013/EU of 8 May 2013
Correction to 1st ATP - Regulation 758/2013/EU of 7 August 2013
5th ATP - Regulation 944/2013/EU of 2 October 2013
6th ATP - Regulation 605/2014/EU of 5 June 2014
WFD Annex III replacement - Regulation 1357/2014/EU of 18 December 2014
Revised List of Wastes 2014 - Decision 2014/955/EU of 18 December 2014
7th ATP - Regulation 2015/1221/EU of 24 July 2015
8th ATP - Regulation (EU) 2016/918 of 19 May 2016
9th ATP - Regulation (EU) 2016/1179 of 19 July 2016
10th ATP - Regulation (EU) 2017/776 of 4 May 2017
HP14 amendment - Regulation (EU) 2017/997 of 8 June 2017
13th ATP - Regulation (EU) 2018/1480 of 4 October 2018
14th ATP - Regulation (EU) 2020/217 of 4 October 2019
15th ATP - Regulation (EU) 2020/1182 of 19 May 2020
POPs Regulation 2004 - Regulation 850/2004/EC of 29 April 2004
1st ATP to POPs Regulation - Regulation 756/2010/EU of 24 August 2010
2nd ATP to POPs Regulation - Regulation 757/2010/EU of 24 August 2010

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

xylene: (conc.: 1.35e-06%)

Classification of sample: TP35-09/10/2020-0.00-0.85m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Sample details

Sample Name:
TP35-09/10/2020-0.00-0.85m
Moisture content:
9.4%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 04 (Soil and stones other than those mentioned in 17 05 03)

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.00959%)

Classification of sample: TP33-09/10/2020-0.20-1.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.0268%)

Classification of sample: TP33-09/10/2020-1.00-2.00m

Hazardous Waste
Classified as **17 05 03 ***
in the List of Waste

Sample details

Sample Name:
TP33-09/10/2020-1.00-2.00m
Moisture content:
12.7%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 03 * (Soil and stones containing hazardous substances)

Hazard properties

HP 7: Carcinogenic "waste which induces cancer or increases its incidence"

Hazard Statements hit:

Carc. 1B; H350 "May cause cancer [state route of exposure if it is conclusively proven that no other routes of exposure cause the hazard]."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.231%)

HP 11: Mutagenic "waste which may cause a mutation, that is a permanent change in the amount or structure of the genetic material in a cell"

Hazard Statements hit:

Muta. 1B; H340 "May cause genetic defects [state route of exposure if it is conclusively proven that no other routes of exposure cause the hazard]."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.231%)

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 2; H225 "Highly flammable liquid and vapour."

Because of determinand:

ethylbenzene: (conc.: 6.19e-07%)

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinands:

xylene: (conc.: 3.62e-06%)
TPH (C6 to C40) petroleum group: (conc.: 0.129%)

Classification of sample: TP28-09/10/2020-1.00-2.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Sample details

Sample Name:
TP28-09/10/2020-1.00-2.00m
Moisture content:
11.1%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 04 (Soil and stones other than those mentioned in 17 05 03)

Classification of sample: TP51-12/10/2020-2.90-3.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Sample details

Sample Name:
TP51-12/10/2020-2.90-3.00m
Moisture content:
7.7%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 04 (Soil and stones other than those mentioned in 17 05 03)

Hazard properties

None identified

Determinands

Moisture content: 7.7% Wet Weight Moisture Correction applied (MC)

Hazard Statements: Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Carc. 2 H351 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Skin Irrit. 2 H315

anthracene (EC Number: 204-371-1, CAS Number: 120-12-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

fluoranthene (EC Number: 205-912-4, CAS Number: 206-44-0)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

pyrene (EC Number: 204-927-3, CAS Number: 129-00-0)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 2014
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Skin Irrit. 2 H315 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **indeno[123-cd]pyrene** (EC Number: 205-893-2, CAS Number: 193-39-5)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Carc. 2 H351

- **benzo[ghi]perylene** (EC Number: 205-883-8, CAS Number: 191-24-2)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 28/02/2015
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 23 Jul 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **coronene** (EC Number: 205-881-7, CAS Number: 191-07-1)

Description/Comments: Data from C&L Inventory Database; no entries in Registered Substances or Pesticides Properties databases; SDS: Sigma Aldrich, 1907/2006 compliant, dated 2012 - no entries; IARC – Group 3, not carcinogenic.
Data source:
http://clp-inventory.echa.europa.eu/SummaryOfClassAndLabelling.aspx?SubstanceID=17010&HarmOnly=no?fc=true&lang=en
Data source date: 16 Jun 2014
Hazard Statements: STOT SE 2 H371

- **ethylbenzene** (EC Number: 202-849-4, CAS Number: 100-41-4)

CLP index number: 601-023-00-4
Description/Comments:
Data source: Commission Regulation (EU) No 605/2014 – 6th Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP6)
Additional Hazard Statement(s): Carc. 2 H351
Reason for additional Hazards Statement(s):
03 Jun 2015 - Carc. 2 H351 hazard statement sourced from: IARC Group 2B (77) 2000

- **polychlorobiphenyls; PCB** (EC Number: 215-648-1, CAS Number: 1336-36-3)

CLP index number: 602-039-00-4
Description/Comments: Worst Case: IARC considers PCB Group 1; Carcinogenic to humans; POP specific threshold from ATP1 (Regulation 756/2010/EU) to POPs Regulation (Regulation 850/2004/EC). Where applicable, the calculation method laid down in European standards EN 12766-1 and EN 12766-2 shall be applied.
Data source: Regulation 1272/2008/EC - Classification, labelling and packaging of substances and mixtures. (CLP)
Additional Hazard Statement(s): Carc. 1A H350
Reason for additional Hazards Statement(s):
29 Sep 2015 - Carc. 1A H350 hazard statement sourced from: IARC Group 1 (23, Sup 7, 100C) 2012

- **pH** (CAS Number: PH)

Description/Comments: Appendix C4
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: None.

- **salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex**

CLP index number: 006-007-00-5
Description/Comments: Conversion factor based on a worst case compound: sodium cyanide
Data source: Commission Regulation (EC) No 790/2009 - 1st Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP1)
Additional Hazard Statement(s): EUH032 >= 0.2 %
Reason for additional Hazards Statement(s):
14 Dec 2015 - EUH032 >= 0.2 % hazard statement sourced from: WM3, Table C12.2

- **TPH (C6 to C40) petroleum group** (CAS Number: TPH)

Description/Comments: Hazard statements taken from WM3 1st Edition 2015; Risk phrases: WM2 3rd Edition 2013
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: Flam. Liq. 3 H226 , Asp. Tox. 1 H304 , STOT RE 2 H373 , Muta. 1B H340 , Carc. 1B H350 , Repr. 2 H361d , Aquatic Chronic 2 H411

Appendix B: Rationale for selection of metal species

antimony {antimony compounds, with the exception of the tetroxide (Sb2O4), pentoxide (Sb2O5), trisulphide (Sb2S3), pentasulphide (Sb2S5) and those specified elsewhere in this Annex}

Worst case species based on risk phrases

arsenic {arsenic trioxide}

Worst case species based on Hazard Statement.

barium {barium sulfate}

conservative

cadmium {cadmium sulfide}

Worst case species based on Hazard Statements.

copper {copper(II) oxide}

Reasonable

chromium in chromium(III) compounds {chromium(III) oxide (worst case)}

oxide conversion factor included

chromium in chromium(VI) compounds {chromium(VI) oxide}

most conservative

lead {lead chromate}

Worst case species based on Hazard Statements.

mercury {mercury dichloride}

Worst case species based on Hazard Statements.

molybdenum {molybdenum(VI) oxide}

Worst case species based on Hazard Statements.

nickel {nickel dihydroxide}

Worst case species based on Hazard Statements.

selenium {selenium compounds with the exception of cadmium sulphoselenide and those specified elsewhere in this Annex}

Worst case species based on Hazard Statements.

zinc {zinc oxide}

Concentrations of chromium VI insufficient for zinc chormate to be present.

boron {diboron trioxide; boric oxide}

Reasonable

cyanides {salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex}

Worst case species

Appendix C: Version

HazWasteOnline Classification Engine: WM3 1st Edition v1.1, May 2018
HazWasteOnline Classification Engine Version: 2020.310.4521.8789 (05 Nov 2020)
HazWasteOnline Database: 2020.310.4521.8789 (05 Nov 2020)

This classification utilises the following guidance and legislation:
WM3 v1.1 - Waste Classification - 1st Edition v1.1 - May 2018
CLP Regulation - Regulation 1272/2008/EC of 16 December 2008
1st ATP - Regulation 790/2009/EC of 10 August 2009
2nd ATP - Regulation 286/2011/EC of 10 March 2011
3rd ATP - Regulation 618/2012/EU of 10 July 2012
4th ATP - Regulation 487/2013/EU of 8 May 2013
Correction to 1st ATP - Regulation 758/2013/EU of 7 August 2013
5th ATP - Regulation 944/2013/EU of 2 October 2013
6th ATP - Regulation 605/2014/EU of 5 June 2014
WFD Annex III replacement - Regulation 1357/2014/EU of 18 December 2014
Revised List of Wastes 2014 - Decision 2014/955/EU of 18 December 2014
7th ATP - Regulation 2015/1221/EU of 24 July 2015
8th ATP - Regulation (EU) 2016/918 of 19 May 2016
9th ATP - Regulation (EU) 2016/1179 of 19 July 2016
10th ATP - Regulation (EU) 2017/776 of 4 May 2017
HP14 amendment - Regulation (EU) 2017/997 of 8 June 2017
13th ATP - Regulation (EU) 2018/1480 of 4 October 2018
14th ATP - Regulation (EU) 2020/217 of 4 October 2019
15th ATP - Regulation (EU) 2020/1182 of 19 May 2020
POPs Regulation 2004 - Regulation 850/2004/EC of 29 April 2004
1st ATP to POPs Regulation - Regulation 756/2010/EU of 24 August 2010
2nd ATP to POPs Regulation - Regulation 757/2010/EU of 24 August 2010

Key

	User supplied data
	Determinand values ignored for classification, see column 'Conc. Not Used' for reason
	Determinand defined or amended by HazWasteOnline (see Appendix A)
	Speciated Deteminand - Unless the Determinand is Note 1, the Conversion Factor is used to calculate the compound concentration
<LOD	Below limit of detection
ND	Not detected
CLP: Note 1	Only the metal concentration has been used for classification

Classification of sample: BH03-09/10/2020-3.00-3.40m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Key

	User supplied data
	Determinand values ignored for classification, see column 'Conc. Not Used' for reason
	Determinand defined or amended by HazWasteOnline (see Appendix A)
	Speciated Deteminand - Unless the Determinand is Note 1, the Conversion Factor is used to calculate the compound concentration
<LOD	Below limit of detection
ND	Not detected
CLP: Note 1	Only the metal concentration has been used for classification

Appendix A: Classifier defined and non CLP determinands

- **barium sulfate** (EC Number: 231-784-4, CAS Number: 7727-43-7)

Conversion factor: 1.7
Description/Comments: No hazard statements
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/89983 Sigma Aldrich SDS dated 15/4/19
Data source date: 02 Apr 2020
Hazard Statements: None.

- **chromium(III) oxide (worst case)** (EC Number: 215-160-9, CAS Number: 1308-38-9)

Conversion factor: 1.462
Description/Comments: Data from C&L Inventory Database
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/33806
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H332 , Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Resp. Sens. 1 H334 , Skin Sens. 1 H317 , Repr. 1B H360FD , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **acenaphthylene** (EC Number: 205-917-1, CAS Number: 208-96-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H302 , Acute Tox. 1 H330 , Acute Tox. 1 H310 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315

- **acenaphthene** (EC Number: 201-469-6, CAS Number: 83-32-9)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Aquatic Chronic 2 H411

- **fluorene** (EC Number: 201-695-5, CAS Number: 86-73-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **phenanthrene** (EC Number: 201-581-5, CAS Number: 85-01-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Carc. 2 H351 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Skin Irrit. 2 H315

- **anthracene** (EC Number: 204-371-1, CAS Number: 120-12-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **fluoranthene** (EC Number: 205-912-4, CAS Number: 206-44-0)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **pyrene** (EC Number: 204-927-3, CAS Number: 129-00-0)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 2014
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Skin Irrit. 2 H315 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

indeno[123-cd]pyrene (EC Number: 205-893-2, CAS Number: 193-39-5)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Carc. 2 H351

benzo[ghi]perylene (EC Number: 205-883-8, CAS Number: 191-24-2)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 28/02/2015
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 23 Jul 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

coronene (EC Number: 205-881-7, CAS Number: 191-07-1)

Description/Comments: Data from C&L Inventory Database; no entries in Registered Substances or Pesticides Properties databases; SDS: Sigma Aldrich, 1907/2006 compliant, dated 2012 - no entries; IARC – Group 3, not carcinogenic.
Data source:
http://clp-inventory.echa.europa.eu/SummaryOfClassAndLabelling.aspx?SubstanceID=17010&HarmOnly=no?fc=true&lang=en
Data source date: 16 Jun 2014
Hazard Statements: STOT SE 2 H371

ethylbenzene (EC Number: 202-849-4, CAS Number: 100-41-4)

CLP index number: 601-023-00-4
Description/Comments:
Data source: Commission Regulation (EU) No 605/2014 – 6th Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP6)
Additional Hazard Statement(s): Carc. 2 H351
Reason for additional Hazards Statement(s):
03 Jun 2015 - Carc. 2 H351 hazard statement sourced from: IARC Group 2B (77) 2000

polychlorobiphenyls; PCB (EC Number: 215-648-1, CAS Number: 1336-36-3)

CLP index number: 602-039-00-4
Description/Comments: Worst Case: IARC considers PCB Group 1; Carcinogenic to humans; POP specific threshold from ATP1 (Regulation 756/2010/EU) to POPs Regulation (Regulation 850/2004/EC). Where applicable, the calculation method laid down in European standards EN 12766-1 and EN 12766-2 shall be applied.
Data source: Regulation 1272/2008/EC - Classification, labelling and packaging of substances and mixtures. (CLP)
Additional Hazard Statement(s): Carc. 1A H350
Reason for additional Hazards Statement(s):
29 Sep 2015 - Carc. 1A H350 hazard statement sourced from: IARC Group 1 (23, Sup 7, 100C) 2012

pH (CAS Number: PH)

Description/Comments: Appendix C4
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: None.

salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex

CLP index number: 006-007-00-5
Description/Comments: Conversion factor based on a worst case compound: sodium cyanide
Data source: Commission Regulation (EC) No 790/2009 - 1st Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP1)
Additional Hazard Statement(s): EUH032 >= 0.2 %
Reason for additional Hazards Statement(s):
14 Dec 2015 - EUH032 >= 0.2 % hazard statement sourced from: WM3, Table C12.2

TPH (C6 to C40) petroleum group (CAS Number: TPH)

Description/Comments: Hazard statements taken from WM3 1st Edition 2015; Risk phrases: WM2 3rd Edition 2013
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: Flam. Liq. 3 H226 , Asp. Tox. 1 H304 , STOT RE 2 H373 , Muta. 1B H340 , Carc. 1B H350 , Repr. 2 H361d , Aquatic Chronic 2 H411

Appendix B: Rationale for selection of metal species

antimony {antimony compounds, with the exception of the tetroxide (Sb2O4), pentoxide (Sb2O5), trisulphide (Sb2S3), pentasulphide (Sb2S5) and those specified elsewhere in this Annex}

Worst case species based on risk phrases

arsenic {arsenic trioxide}

Worst case species based on Hazard Statement.

barium {barium sulfate}

conservative

cadmium {cadmium sulfide}

Worst case species based on Hazard Statements.

copper {copper(II) oxide}

Reasonable

chromium in chromium(III) compounds {chromium(III) oxide (worst case)}

oxide conversion factor included

chromium in chromium(VI) compounds {chromium(VI) oxide}

most conservative

lead {lead chromate}

Worst case species based on Hazard Statements.

mercury {mercury dichloride}

Worst case species based on Hazard Statements.

molybdenum {molybdenum(VI) oxide}

Worst case species based on Hazard Statements.

nickel {nickel dihydroxide}

Worst case species based on Hazard Statements.

selenium {selenium compounds with the exception of cadmium sulphoselenide and those specified elsewhere in this Annex}

Worst case species based on Hazard Statements.

zinc {zinc oxide}

Concentrations of chromium VI insufficient for zinc chormate to be present.

boron {diboron trioxide; boric oxide}

Reasonable

cyanides {salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex}

Worst case species

Appendix C: Version

HazWasteOnline Classification Engine: WM3 1st Edition v1.1, May 2018
HazWasteOnline Classification Engine Version: 2020.315.4525.8798 (10 Nov 2020)
HazWasteOnline Database: 2020.315.4525.8798 (10 Nov 2020)

This classification utilises the following guidance and legislation:
WM3 v1.1 - Waste Classification - 1st Edition v1.1 - May 2018
CLP Regulation - Regulation 1272/2008/EC of 16 December 2008
1st ATP - Regulation 790/2009/EC of 10 August 2009
2nd ATP - Regulation 286/2011/EC of 10 March 2011
3rd ATP - Regulation 618/2012/EU of 10 July 2012
4th ATP - Regulation 487/2013/EU of 8 May 2013
Correction to 1st ATP - Regulation 758/2013/EU of 7 August 2013
5th ATP - Regulation 944/2013/EU of 2 October 2013
6th ATP - Regulation 605/2014/EU of 5 June 2014
WFD Annex III replacement - Regulation 1357/2014/EU of 18 December 2014
Revised List of Waste 2014 - Decision 2014/955/EU of 18 December 2014
7th ATP - Regulation 2015/1221/EU of 24 July 2015
8th ATP - Regulation (EU) 2016/918 of 19 May 2016
9th ATP - Regulation (EU) 2016/1179 of 19 July 2016
10th ATP - Regulation (EU) 2017/776 of 4 May 2017
HP14 amendment - Regulation (EU) 2017/997 of 8 June 2017
13th ATP - Regulation (EU) 2018/1480 of 4 October 2018
14th ATP - Regulation (EU) 2020/217 of 4 October 2019
15th ATP - Regulation (EU) 2020/1182 of 19 May 2020
POPs Regulation 2019 - Regulation (EU) 2019/1021 of 20 June 2019

Hazardous Waste
Classified as **17 05 03 ***
in the List of Waste

Sample details

Sample Name:
TP 37-13/10/2020-2.00-3.00m
Moisture content:
9.2%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 03 * (Soil and stones containing hazardous substances)

Hazard properties

HP 7: Carcinogenic "waste which induces cancer or increases its incidence"

Hazard Statements hit:

Carc. 1B; H350 "May cause cancer [state route of exposure if it is conclusively proven that no other routes of exposure cause the hazard]."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.112%)

HP 11: Mutagenic "waste which may cause a mutation, that is a permanent change in the amount or structure of the genetic material in a cell"

Hazard Statements hit:

Muta. 1B; H340 "May cause genetic defects [state route of exposure if it is conclusively proven that no other routes of exposure cause the hazard]."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.112%)

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 2; H225 "Highly flammable liquid and vapour."

Because of determinand:

ethylbenzene: (conc.: 1.54e-06%)

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinands:

xylene: (conc.: 8.54e-06%)
TPH (C6 to C40) petroleum group: (conc.: 0.112%)

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 2; H225 "Highly flammable liquid and vapour."

Because of determinand:

ethylbenzene: (conc.: 9.8e-07%)

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinands:

xylene: (conc.: 6.05e-06%)
TPH (C6 to C40) petroleum group: (conc.: 0.195%)

Classification of sample: TP 09-13/10/2020-0.80-1.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinands:

xylene: (conc.: 1.13e-06%)
TPH (C6 to C40) petroleum group: (conc.: 0.00668%)

Classification of sample: TP 25-13/10/2020-0.80-1.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Key

	User supplied data
	Determinand values ignored for classification, see column 'Conc. Not Used' for reason
	Determinand defined or amended by HazWasteOnline (see Appendix A)
	Speciated Deteminand - Unless the Determinand is Note 1, the Conversion Factor is used to calculate the compound concentration
<LOD	Below limit of detection
ND	Not detected
CLP: Note 1	Only the metal concentration has been used for classification

Appendix A: Classifier defined and non CLP determinands

- **barium sulfate** (EC Number: 231-784-4, CAS Number: 7727-43-7)

Conversion factor: 1.7
Description/Comments: No hazard statements
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/89983 Sigma Aldrich SDS dated 15/4/19
Data source date: 02 Apr 2020
Hazard Statements: None.

- **chromium(III) oxide (worst case)** (EC Number: 215-160-9, CAS Number: 1308-38-9)

Conversion factor: 1.462
Description/Comments: Data from C&L Inventory Database
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/33806
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H332 , Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Resp. Sens. 1 H334 , Skin Sens. 1 H317 , Repr. 1B H360FD , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **acenaphthylene** (EC Number: 205-917-1, CAS Number: 208-96-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H302 , Acute Tox. 1 H330 , Acute Tox. 1 H310 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315

- **acenaphthene** (EC Number: 201-469-6, CAS Number: 83-32-9)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Aquatic Chronic 2 H411

- **fluorene** (EC Number: 201-695-5, CAS Number: 86-73-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **phenanthrene** (EC Number: 201-581-5, CAS Number: 85-01-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Carc. 2 H351 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Skin Irrit. 2 H315

- **anthracene** (EC Number: 204-371-1, CAS Number: 120-12-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **fluoranthene** (EC Number: 205-912-4, CAS Number: 206-44-0)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **pyrene** (EC Number: 204-927-3, CAS Number: 129-00-0)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 2014
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Skin Irrit. 2 H315 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

indeno[123-cd]pyrene (EC Number: 205-893-2, CAS Number: 193-39-5)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Carc. 2 H351

benzo[ghi]perylene (EC Number: 205-883-8, CAS Number: 191-24-2)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 28/02/2015
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 23 Jul 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

coronene (EC Number: 205-881-7, CAS Number: 191-07-1)

Description/Comments: Data from C&L Inventory Database; no entries in Registered Substances or Pesticides Properties databases; SDS: Sigma Aldrich, 1907/2006 compliant, dated 2012 - no entries; IARC – Group 3, not carcinogenic.
Data source:
http://clp-inventory.echa.europa.eu/SummaryOfClassAndLabelling.aspx?SubstanceID=17010&HarmOnly=no?fc=true&lang=en
Data source date: 16 Jun 2014
Hazard Statements: STOT SE 2 H371

ethylbenzene (EC Number: 202-849-4, CAS Number: 100-41-4)

CLP index number: 601-023-00-4
Description/Comments:
Data source: Commission Regulation (EU) No 605/2014 – 6th Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP6)
Additional Hazard Statement(s): Carc. 2 H351
Reason for additional Hazards Statement(s):
03 Jun 2015 - Carc. 2 H351 hazard statement sourced from: IARC Group 2B (77) 2000

polychlorobiphenyls; PCB (EC Number: 215-648-1, CAS Number: 1336-36-3)

CLP index number: 602-039-00-4
Description/Comments: Worst Case: IARC considers PCB Group 1; Carcinogenic to humans; POP specific threshold from ATP1 (Regulation 756/2010/EU) to POPs Regulation (Regulation 850/2004/EC). Where applicable, the calculation method laid down in European standards EN 12766-1 and EN 12766-2 shall be applied.
Data source: Regulation 1272/2008/EC - Classification, labelling and packaging of substances and mixtures. (CLP)
Additional Hazard Statement(s): Carc. 1A H350
Reason for additional Hazards Statement(s):
29 Sep 2015 - Carc. 1A H350 hazard statement sourced from: IARC Group 1 (23, Sup 7, 100C) 2012

pH (CAS Number: PH)

Description/Comments: Appendix C4
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: None.

salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex

CLP index number: 006-007-00-5
Description/Comments: Conversion factor based on a worst case compound: sodium cyanide
Data source: Commission Regulation (EC) No 790/2009 - 1st Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP1)
Additional Hazard Statement(s): EUH032 >= 0.2 %
Reason for additional Hazards Statement(s):
14 Dec 2015 - EUH032 >= 0.2 % hazard statement sourced from: WM3, Table C12.2

TPH (C6 to C40) petroleum group (CAS Number: TPH)

Description/Comments: Hazard statements taken from WM3 1st Edition 2015; Risk phrases: WM2 3rd Edition 2013
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: Flam. Liq. 3 H226 , Asp. Tox. 1 H304 , STOT RE 2 H373 , Muta. 1B H340 , Carc. 1B H350 , Repr. 2 H361d , Aquatic Chronic 2 H411

Appendix B: Rationale for selection of metal species

antimony {antimony compounds, with the exception of the tetroxide (Sb2O4), pentoxide (Sb2O5), trisulphide (Sb2S3), pentasulphide (Sb2S5) and those specified elsewhere in this Annex}

Worst case species based on risk phrases

arsenic {arsenic trioxide}
Worst case species based on Hazard Statement.
barium {barium sulfate}
conservative
cadmium {cadmium sulfide}
Worst case species based on Hazard Statements.
copper {copper(II) oxide}
Reasonable
chromium in chromium(III) compounds {chromium(III) oxide (worst case)}
oxide conversion factor included
chromium in chromium(VI) compounds {chromium(VI) oxide}
most conservative
lead {lead chromate}
Worst case species based on Hazard Statements.
mercury {mercury dichloride}
Worst case species based on Hazard Statements.
molybdenum {molybdenum(VI) oxide}
Worst case species based on Hazard Statements.
nickel {nickel dihydroxide}
Worst case species based on Hazard Statements.
selenium {selenium compounds with the exception of cadmium sulphoselenide and those specified elsewhere in this Annex}
Worst case species based on Hazard Statements.
zinc {zinc oxide}
Concentrations of chromium VI insufficient for zinc chormate to be present.
boron {diboron trioxide; boric oxide}
Reasonable
cyanides {salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex}
Worst case species

Appendix C: Version

HazWasteOnline Classification Engine: WM3 1st Edition v1.1, May 2018
HazWasteOnline Classification Engine Version: 2020.310.4521.8789 (05 Nov 2020)
HazWasteOnline Database: 2020.310.4521.8789 (05 Nov 2020)

This classification utilises the following guidance and legislation:
WM3 v1.1 - Waste Classification - 1st Edition v1.1 - May 2018
CLP Regulation - Regulation 1272/2008/EC of 16 December 2008
1st ATP - Regulation 790/2009/EC of 10 August 2009
2nd ATP - Regulation 286/2011/EC of 10 March 2011
3rd ATP - Regulation 618/2012/EU of 10 July 2012
4th ATP - Regulation 487/2013/EU of 8 May 2013
Correction to 1st ATP - Regulation 758/2013/EU of 7 August 2013
5th ATP - Regulation 944/2013/EU of 2 October 2013
6th ATP - Regulation 605/2014/EU of 5 June 2014
WFD Annex III replacement - Regulation 1357/2014/EU of 18 December 2014
Revised List of Wastes 2014 - Decision 2014/955/EU of 18 December 2014
7th ATP - Regulation 2015/1221/EU of 24 July 2015
8th ATP - Regulation (EU) 2016/918 of 19 May 2016
9th ATP - Regulation (EU) 2016/1179 of 19 July 2016
10th ATP - Regulation (EU) 2017/776 of 4 May 2017
HP14 amendment - Regulation (EU) 2017/997 of 8 June 2017
13th ATP - Regulation (EU) 2018/1480 of 4 October 2018
14th ATP - Regulation (EU) 2020/217 of 4 October 2019
15th ATP - Regulation (EU) 2020/1182 of 19 May 2020
POPs Regulation 2004 - Regulation 850/2004/EC of 29 April 2004
1st ATP to POPs Regulation - Regulation 756/2010/EU of 24 August 2010
2nd ATP to POPs Regulation - Regulation 757/2010/EU of 24 August 2010

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.0174%)

Classification of sample: BH08-12/10/2020-3.00-3.40m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Key

	User supplied data
	Determinand values ignored for classification, see column 'Conc. Not Used' for reason
	Determinand defined or amended by HazWasteOnline (see Appendix A)
	Speciated Deteminand - Unless the Determinand is Note 1, the Conversion Factor is used to calculate the compound concentration
<LOD	Below limit of detection
ND	Not detected
CLP: Note 1	Only the metal concentration has been used for classification

Appendix A: Classifier defined and non CLP determinands

pH (CAS Number: PH)

Description/Comments: Appendix C4
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: None.

barium sulfate (EC Number: 231-784-4, CAS Number: 7727-43-7)

Conversion factor: 1.7
Description/Comments: No hazard statements
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/89983 Sigma Aldrich SDS dated 15/4/19
Data source date: 02 Apr 2020
Hazard Statements: None.

chromium(III) oxide (worst case) (EC Number: 215-160-9, CAS Number: 1308-38-9)

Conversion factor: 1.462
Description/Comments: Data from C&L Inventory Database
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/33806
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H332 , Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Resp. Sens. 1 H334 , Skin Sens. 1 H317 , Repr. 1B H360FD , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

acenaphthylene (EC Number: 205-917-1, CAS Number: 208-96-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H302 , Acute Tox. 1 H330 , Acute Tox. 1 H310 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315

acenaphthene (EC Number: 201-469-6, CAS Number: 83-32-9)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Aquatic Chronic 2 H411

fluorene (EC Number: 201-695-5, CAS Number: 86-73-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

phenanthrene (EC Number: 201-581-5, CAS Number: 85-01-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Carc. 2 H351 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Skin Irrit. 2 H315

anthracene (EC Number: 204-371-1, CAS Number: 120-12-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

fluoranthene (EC Number: 205-912-4, CAS Number: 206-44-0)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **pyrene** (EC Number: 204-927-3, CAS Number: 129-00-0)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 2014
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Skin Irrit. 2 H315 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **indeno[123-cd]pyrene** (EC Number: 205-893-2, CAS Number: 193-39-5)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Carc. 2 H351

- **benzo[ghi]perylene** (EC Number: 205-883-8, CAS Number: 191-24-2)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 28/02/2015
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 23 Jul 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **coronene** (EC Number: 205-881-7, CAS Number: 191-07-1)

Description/Comments: Data from C&L Inventory Database; no entries in Registered Substances or Pesticides Properties databases; SDS: Sigma Aldrich, 1907/2006 compliant, dated 2012 - no entries; IARC – Group 3, not carcinogenic.
Data source:
http://clp-inventory.echa.europa.eu/SummaryOfClassAndLabelling.aspx?SubstanceID=17010&HarmOnly=no?fc=true&lang=en
Data source date: 16 Jun 2014
Hazard Statements: STOT SE 2 H371

- **ethylbenzene** (EC Number: 202-849-4, CAS Number: 100-41-4)

CLP index number: 601-023-00-4
Description/Comments:
Data source: Commission Regulation (EU) No 605/2014 – 6th Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP6)
Additional Hazard Statement(s): Carc. 2 H351
Reason for additional Hazards Statement(s):
03 Jun 2015 - Carc. 2 H351 hazard statement sourced from: IARC Group 2B (77) 2000

- **polychlorobiphenyls; PCB** (EC Number: 215-648-1, CAS Number: 1336-36-3)

CLP index number: 602-039-00-4
Description/Comments: Worst Case: IARC considers PCB Group 1; Carcinogenic to humans; POP specific threshold from ATP1 (Regulation 756/2010/EU) to POPs Regulation (Regulation 850/2004/EC). Where applicable, the calculation method laid down in European standards EN 12766-1 and EN 12766-2 shall be applied.
Data source: Regulation 1272/2008/EC - Classification, labelling and packaging of substances and mixtures. (CLP)
Additional Hazard Statement(s): Carc. 1A H350
Reason for additional Hazards Statement(s):
29 Sep 2015 - Carc. 1A H350 hazard statement sourced from: IARC Group 1 (23, Sup 7, 100C) 2012

- **salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex**

CLP index number: 006-007-00-5
Description/Comments: Conversion factor based on a worst case compound: sodium cyanide
Data source: Commission Regulation (EC) No 790/2009 - 1st Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP1)
Additional Hazard Statement(s): EUH032 >= 0.2 %
Reason for additional Hazards Statement(s):
14 Dec 2015 - EUH032 >= 0.2 % hazard statement sourced from: WM3, Table C12.2

- **TPH (C6 to C40) petroleum group** (CAS Number: TPH)

Description/Comments: Hazard statements taken from WM3 1st Edition 2015; Risk phrases: WM2 3rd Edition 2013
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: Flam. Liq. 3 H226 , Asp. Tox. 1 H304 , STOT RE 2 H373 , Muta. 1B H340 , Carc. 1B H350 , Repr. 2 H361d , Aquatic Chronic 2 H411

Appendix B: Rationale for selection of metal species

antimony {antimony compounds, with the exception of the tetroxide (Sb2O4), pentoxide (Sb2O5), trisulphide (Sb2S3), pentasulphide (Sb2S5) and those specified elsewhere in this Annex}

Worst case species based on risk phrases

arsenic {arsenic trioxide}

Worst case species based on Hazard Statement.

barium {barium sulfate}

conservative

cadmium {cadmium sulfide}

Worst case species based on Hazard Statements.

copper {copper(II) oxide}

Reasonable

chromium in chromium(III) compounds {chromium(III) oxide (worst case)}

oxide conversion factor included

chromium in chromium(VI) compounds {chromium(VI) oxide}

most conservative

lead {lead chromate}

Worst case species based on Hazard Statements.

mercury {mercury dichloride}

Worst case species based on Hazard Statements.

molybdenum {molybdenum(VI) oxide}

Worst case species based on Hazard Statements.

nickel {nickel dihydroxide}

Worst case species based on Hazard Statements.

selenium {selenium compounds with the exception of cadmium sulphoselenide and those specified elsewhere in this Annex}

Worst case species based on Hazard Statements.

zinc {zinc oxide}

Concentrations of chromium VI insufficient for zinc chormate to be present.

boron {diboron trioxide; boric oxide}

Reasonable

cyanides {salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex}

Worst case species

Appendix C: Version

HazWasteOnline Classification Engine: WM3 1st Edition v1.1, May 2018
HazWasteOnline Classification Engine Version: 2020.315.4525.8798 (10 Nov 2020)
HazWasteOnline Database: 2020.315.4525.8798 (10 Nov 2020)

This classification utilises the following guidance and legislation:
WM3 v1.1 - Waste Classification - 1st Edition v1.1 - May 2018
CLP Regulation - Regulation 1272/2008/EC of 16 December 2008
1st ATP - Regulation 790/2009/EC of 10 August 2009
2nd ATP - Regulation 286/2011/EC of 10 March 2011
3rd ATP - Regulation 618/2012/EU of 10 July 2012
4th ATP - Regulation 487/2013/EU of 8 May 2013
Correction to 1st ATP - Regulation 758/2013/EU of 7 August 2013
5th ATP - Regulation 944/2013/EU of 2 October 2013
6th ATP - Regulation 605/2014/EU of 5 June 2014
WFD Annex III replacement - Regulation 1357/2014/EU of 18 December 2014
Revised List of Waste 2014 - Decision 2014/955/EU of 18 December 2014
7th ATP - Regulation 2015/1221/EU of 24 July 2015
8th ATP - Regulation (EU) 2016/918 of 19 May 2016
9th ATP - Regulation (EU) 2016/1179 of 19 July 2016
10th ATP - Regulation (EU) 2017/776 of 4 May 2017
HP14 amendment - Regulation (EU) 2017/997 of 8 June 2017
13th ATP - Regulation (EU) 2018/1480 of 4 October 2018
14th ATP - Regulation (EU) 2020/217 of 4 October 2019
15th ATP - Regulation (EU) 2020/1182 of 19 May 2020
POPs Regulation 2019 - Regulation (EU) 2019/1021 of 20 June 2019

1.0 Preamble

On the instructions of OCSC Consulting Engineers, a site investigation was carried out by Ground Investigations Ireland Ltd., between October and December 2020 at the site of the proposed Site on Emmet Road Inchicore Dublin 8.

2.0 Overview

2.1. Background

It is proposed to construct a mixed use Residential and Commercial development with Community facilities and associated services, access roads and car parking at the proposed site. The site is currently occupied by St Michaels Estate green space with Golden Bridge Cemetery running along the southern boundary of the site. Richmond Barracks runs along the eastern boundary of the site. The Inchicore Pigeon Club and a HSE Facility on Emmet Road and St Johns Bosco Community Centre in the northern portion of the site. The proposed construction is envisaged to consist of conventional foundations and pavement make up with some local excavations for services and plant.

2.2. Purpose and Scope

The purpose of the site investigation was to investigate subsurface conditions utilising a variety of investigative methods in accordance with the project specification. The scope of the work undertaken for this project included the following:

- Visit project site to observe existing conditions
- Carry out 18 No. Trial Pits to a maximum depth of 3.60m BGL
- Carry out 9 No. Foundation Inspection Pits to determine existing foundation details
- Carry out 2 No. Soakaways to determine a soil infiltration value to BRE digest 365
- Carry out 6 No Plate Bearing Test to determine the subgrade modulus
- Carry out 12 No Slit Trenches to expose services and existing services and foundations
- Carry out 52 No. Window Sample Boreholes to recover soil samples
- Carry out 12 No. Rotary Core Boreholes to a maximum depth of 15.40m BGL
- Installation of 4 No. Groundwater monitoring wells
- Installation of 6 No. Gas Monitoring wells
- Geotechnical & Environmental Laboratory testing
- Report with Recommendations

3.0 Subsurface Exploration

3.1. General

During the ground investigation a programme of intrusive investigation specified by the Consulting Engineer was undertaken to determine the sub surface conditions at the proposed site. Regular

sampling and in-situ testing was undertaken in the exploratory holes to facilitate the geotechnical descriptions and to enable laboratory testing to be carried out on the soil samples recovered during excavation and drilling.
The procedures used in this site investigation are in accordance with Eurocode 7 Part 2: Ground Investigation and testing (ISEN 1997 – 2:2007) and B.S. 5930:2015.

3.2. Trial Pits

The trial pits were excavated using a 3T tracked excavator at the locations shown in the exploratory hole location plan in Appendix 1. The locations were checked using a CAT scan to minimise the potential for encountering services during the excavation. The trial pits were sampled, logged and photographed by a Geotechnical Engineer/Engineering Geologist prior to backfilling with arisings. Notes were made of any services, inclusions, pit stability, groundwater encountered and the characteristics of the strata encountered and are presented on the trial pit logs which are provided in Appendix 2 of this Report.

3.3. Foundation Pits

The foundation inspection pits were excavated at the locations shown in the exploratory hole location plan in Appendix 1. The exposed foundations were logged and sketched prior to backfilling and reinstatement. The logs and sketches are provided in Appendix 3 of this Report.

3.4. Soakaway Testing

The soakaway testing was carried out in selected trial pits at the locations shown in the exploratory hole location plan in Appendix 1. These pits were carefully excavated and filled with water to assess the infiltration characteristics of the proposed site. The pits were allowed to drain and the drop in water level was recorded over time as required by BRE Digest 365. The pits were logged prior to completing the soakaway test and were backfilled with arising's upon completion. The soakaway test results are provided in Appendix 4 of this Report.

3.5. Insitu Plate Bearing Test

The plate bearing tests were carried out using a 305mm or 450mm diameter plate at the locations shown on the site plan in Appendix 1. The plate was loaded in increments using a hydraulic jack and an excavator to provide a reaction and the displacement was monitored in accordance with BS1377 Part 9 using independently mounted digital strain gauges. The constrained modulus and equivalent CBR are calculated in accordance with HD29/75 and are provided on the test reports in Appendix 5 of this Report.

3.6. Slit Trenching

The slit trenches were excavated using 3T tracked excavator at the locations shown in the exploratory hole location plan in Appendix 1. The locations were checked using a CAT scan to minimise the potential for encountering services during the excavation. The soil was slowly stripped using a spotter on the trench to alert the driver if any services were seen, to avoid damage to any underlying services. The slit trenches were sampled, logged and photographed by a Geotechnical Engineer/Engineering Geologist prior to backfilling with arisings. Notes were made of any services, inclusions, pit stability, groundwater encountered and the characteristics of the strata encountered and are presented on the slit trench records which are provided in Appendix 6 of this Report.

3.7. Window Sampling

The window sampling was carried out at the locations shown in the location plan in Appendix 1 using a Tecopsa SPT Tec 10 percussion drilling rig. The window sampling consists of a 1m long steel tube with a cutting edge and an internal plastic liner which is mechanically driven into the ground utilising a 50kg weight falling a height of 500mm. Upon completion of the 1m sample, the tube is withdrawn and the plastic liner removed and sealed for logging and sub sampling by a Geotechnical Engineer/Engineering Geologist. The tube is replaced in the borehole and a subsequent 1m sample can be recovered. Occasionally outer casing or a reduced diameter tube is utilised to enable the window sample to progress in difficult drilling conditions. Geotechnical or environmental soil samples can be recovered from each of the liners following logging. The window sample records are provided in Appendix 7 of this Report.

3.8. Rotary Boreholes

The rotary coring was carried out by a track mounted T44 Beretta rig at the locations shown on the location plan in Appendix 1. The rotary boreholes were completed from the ground surface or alternatively, where noted on the individual borehole log, from the base of the cable percussion borehole where a temporary liner was installed to facilitate follow-on rotary coring.

The T44 Beretta is equipped with rubber tracks which allow for short travel on pavement surfaces avoiding any damage to the surface. The T44 Beretta utilises a triple tube core barrel system operated using a wireline drilling process. The outer barrel is rotated by the drill rods and at its lower end, carries the coring bit. The inner barrel is mounted on a swivel so that it does not rotate during the process. The third barrel or liner is placed within the second one to retain the core intact and to preserve as much as possible the fabric of the drilling stratum. The core is cut by the coring bit and passes to the inner liner. The core is brought up to the surface within the inner barrel on a small diameter wire rope or line attached to the “overshoot” recovery tool which is then placed into a core box in order of recovery. A drilling fluid, typically air mist or water flush is passed from the surface through hollow drill rods to the drill bit, and is used to cool the drill bit. Temporary casing is used in some situations to support unstable ground or to seal off fissures or voids.

It should be noted that the rotary coring can only achieve limited recovery in overburden, particularly granular or weakly cemented strata due to the flushing medium washing away the cohesive fraction

during coring. The recovery achieved, where required is noted on the borehole logs and core photographs are provided to allow assessment of the core recovered. The rotary borehole logs are provided in Appendix 8 of this Report.

3.9. Surveying

The exploratory hole locations have been recorded using a Geomax Zenith System which records the coordinates and elevation of the locations to ITM or Irish National Grid as required by the project specification. The coordinates and elevations are provided on the exploratory hole logs in the appendices of this Report.

3.10. Groundwater & Gas Monitoring Installations

Groundwater and Gas Monitoring Installation were installed upon the completion of the boreholes to enable sampling and the determination of the equilibrium groundwater level. The typical groundwater monitoring installation consists of a 50mm HDPE slotted pipe with a pea gravel response zone and bentonite seal installed to the Engineers specification. Where required the standpipe is sealed with a gas tap and finished with a durable steel cover fixed in place with a concrete surround. The installation details are provided on the exploratory hole logs in the appendices of this Report.

3.11. Laboratory Testing

Samples were selected from the exploratory holes for a range of geotechnical and environmental testing to assist in the classification of soils and to provide information for the proposed design.
Environmental & Chemical testing as required by the specification, including the Rilta Suite, pH and sulphate testing was carried out by Element Materials Technology Laboratory in the UK. The Rilta suite testing includes both Solid Waste and Leachate Waste Acceptance Criteria.
Geotechnical testing consisting of moisture content, Atterberg limits, Particle Size Distribution (PSD), tests were carried out in NMTL's Geotechnical Laboratory in Carlow. Specialist shear strength testing consisting of quick undrained, consolidated undrained triaxial, testing was carried out on undisturbed Geobor S samples where recovered.
Rock strength testing including Point Load (Is_{50}) testing was carried out in James Fisher Testing Services Laboratory in Portlaoise.
The results of the laboratory testing are included in Appendix 9 of this Report.

4.0 Ground Conditions

4.1. General

The ground conditions encountered during the investigation are summarised below with reference to insitu and laboratory test results. The full details of the strata encountered during the ground investigation are provided in the exploratory hole logs included in the appendices of this report.

The sequence of strata encountered were consistent across the site and are generally comprised;

- Topsoil/Surfacing
- Made Ground
- Granular Deposits
- Cohesive Deposits
- Weathered Bedrock
- Bedrock

TOPSOIL: Topsoil was encountered in the majority of exploratory holes and was present to a maximum depth of 0.30m BGL. Tarmac surfacing was present typically to a depth of 0.10m BGL and was present I exploratory holes to the north of the site.

MADE GROUND: Made Ground deposits were encountered beneath the Topsoil/Surfacing and were present to a varying depths of between 1.0m and 3.50m BGL. These deposits were described generally as *brown* or *grey slightly sandy slightly gravelly CLAY* or *Brown slightly sandy clayey subangular to subrounded fine to medium GRAVEL with occasional cobbles and boulders and contained occasional fragments of concrete, red brick, glass and plastic*.

It should be noted that recovery in the upper runs of the Geobor S boreholes varied with some of the unconsolidated made ground not fully recovered due to the nature of the material and the rotary drilling techniques. Recovery was consistently 100% in the firm to stiff or stiff cohesive deposits. In the majority of window samples carried out adjacent to the boreholes Made Ground deposits were recovered where Geobor S boreholes had produced poor recovery.

COHESIVE DEPOSITS: Cohesive deposits were encountered beneath the Made Ground and were described typically as *brown slightly sandy gravelly CLAY with occasional cobbles and boulders* overlying a *stiff dark grey slightly sandy gravelly CLAY with occasional cobbles and boulders*. The secondary sand and gravel constituents varied across the site and with depth, with granular lenses occasionally present in the glacial till matrix. The strength of the cohesive deposits typically increased with depth and was firm to stiff or stiff below 2.5m BGL in the majority of the exploratory holes. These deposits had some, occasional or frequent cobble and boulder content where noted on the exploratory hole logs.

GRANULAR DEPOSITS: The granular deposits were encountered within the cohesive deposits and were typically described as G*rey brown slightly sandy subangular to subrounded GRAVEL* or *dark grey clayey fine to coarse SAND with occasional cobbles and rare boulders.* The secondary sand/gravel and silt/clay constituents varied across the site and with depth while occasional or frequent cobble and boulder content also present where noted on the exploratory hole logs.
Based on the SPT N values the deposits are typically medium dense and become dense with depth. It should be noted that many of the trial pits where granular deposits or groundwater were encountered, experienced instability. This was described either as side wall spalling or as side wall collapse in the remarks section at the base of the trial pit logs. A significant groundwater strike was noted in the boreholes on encountering the granular deposits and the driller noted blowing sands or gravels during drilling.

WEATHERED BEDROCK: In some of the exploratory boreholes weathered rock was encountered. This material was recovered typically as angular gravel and cobbles of Limestone/Mudstone however there was some variability in the fracture spacing and the ease at which the excavator could progress. Some clay and sand were also present with the rock mass either from weathering or as infilling to fractures which were opened upon excavation.

BEDROCK: The rotary core boreholes recovered Medium strong to very strong grey/dark grey fine to medium grained laminated LIMESTONE interbedded with weak black fine grained laminated MUDSTONE. This is typical of the Calp Formation, which is noted on the geological mapping to the east of the proposed site. Rare visible pyrite veins were noted during logging which are typically present within the Calp Limestone.
The depth to rock varies from 3.05m BGL in BH11 to the south of the site to a maximum of 12.60m BGL in BH04 to the north of the site. The total core recovery is good, typically 100% with some of the uppermost runs dropping to 80 or 90%. The SCR and RQD both are relatively poor in the upper weathered zone, often recovered as non-intact, however both indices show an increase with depth in each of the boreholes.

4.2. Groundwater

Groundwater strikes are noted on the exploratory hole logs where they occurred and where possible drilling was suspended for twenty minutes to allow the subsequent rise in groundwater to be recorded. We would point out that these exploratory holes did not remain open for sufficiently long periods of time to establish the hydrogeological regime and groundwater levels would be expected to vary with the tide, time of year, rainfall, nearby construction and other factors. For this reason, standpipes were installed in BH02, BH07, BH08 and BH12 to allow the equilibrium groundwater level to be determined. OCSC are monitoring the groundwater levels post fieldworks.

4.3. Laboratory Testing

4.3.1. Geotechnical Laboratory Testing

The geotechnical testing carried out on soil samples recovered generally confirm the descriptions on the logs with the primary constituent of the cohesive deposits found to be a CLAY of low to intermediate plasticity. The Particle Size Distribution tests confirm that generally the cohesive deposits are well-graded with percentages of sands and gravels ranging between 13.8% and 62.7% generally with fines contents of 20.6 to 43.2%.
The Particle Size Distribution tests confirm that generally the granular deposits are well-graded with percentages of sands/gravels and silt/clay typically 17.0% with a gravel/sand content of typically 15.1% to 62.7%.

The cohesive strength parameters derived from the quick undrained triaxial testing on cohesive samples at 2.50m BGL and 6.25m BGL ranged from 99.8 kPa to 488.3 kPa consecutively on remoulded samples. The consolidated undrained testing to determine the effective shear strength parameters, gave an effective angle of friction of 37.5 degrees at 4.10m BGL with an effective cohesion for both samples of 0 kPa.

4.3.2. Chemical Laboratory Testing

The pH and sulphate testing carried out indicate that pH results are near neutral and that the water soluble sulphate results is low when compared to the guideline values from BRE Special Digest 1:2005. The samples tested classify the soil as a Design Sulphate Level DS-1.

4.3.3. Environmental Laboratory Testing

The waste classification report is included under the cover of a sperate report by OCSC.

4.3.4. Rock Laboratory Testing

The rock testing carried out on samples recovered from the boreholes reported Unconfined Compressive Strength (UCS) values ranging between 30.5 and 38.1 MPa while the point load testing gave Is50 values ranging between 0.55 to 6.40MPa. The Is_{50} results correlate to the UCS values using a factor of approximately 20, giving values of 10.0 MPa and 124.60 MPa. These results correlate to the strength descriptions ranging between of Weak to Very Strong and confirming the variability of this stratum and the descriptions on the logs.

The results from the completed laboratory testing are included in Appendix 9 of this report.

4.4. Geotechnical Design Parameters

Preliminary geotechnical design parameters for the materials encountered during the ground investigation have been summarised in Table 1 Geotechnical Design Parameters. Both laboratory test and SPT N results, using standard empirical relationships, have been used to determine the geotechnical parameters of the overburden strata.

Shear strength parameters have been determined using laboratory testing and established empirical relationships for the relevant materials. Based on the relationship published by Stroud, the correlation of $Cu = f_1 \times N$ is used to estimate the undrained shear strength of the cohesive deposits, where f1 is determined using a correlation with the plasticity index.

The shear strength parameters from the granular stratum are provided using the effective shear strength parameters determined from the uncorrected SPT N values after Peck et al reported by Tomlinson Foundation Design and Construction 7th Ed. (2001).

A range is provided for the compressibility parameter mv based on correlations with the SPT N value based on the relationship published by Stroud, the correlation of $M_v = 1/(f_2 \times N)$ where f_2 is determined using a correlation with the plasticity index.

.

Table 1 Recommended Geotechnical Parameters based on GII GI Data

Stratum	Bulk Density (kN/m^3)	SPT 'N' Correlated	Undrained Shear Strength C_u (kN/m^2)	Effective Strength Parameters		Poisson's Ratio v (v_u)	Co-efficient of Compressibility
				Cohesion c' (kN/m^2)	ϕ' degrees		m_v (m^2/MN)
Granular Made Ground Deposits	16 – 20*1	1 - 20	n/a	-	28 – 30*4	0.1 – 0.3	n/a
Cohesive Made Ground Deposits	16 – 20*1	1 - 20	5 – 100*2	0	25 - 30*4	0.2 (0.5)	0.1-1.5*3
Soft Cohesive Deposits	16 – 20*1	1 - 8	5 - 40*2	0 - 1	25 - 28*4	0.2 (0.5)	0.1 – 1.5*3
Firm Cohesive Deposits	18 – 20[1]	8 – 15	40 - 75*2	0 - 3	28 – 30*4	0.2 (0.5)	0.1 – 0.3*3
Stiff Cohesive Deposits	19 – 20*1	15 – 25	75 - 150*2	0 - 5	30 - 33*4	0.2 (0.5)	0.05 – 0.1*3

*1 Values for bulk density assumed

*2 Based on correlated SPT N values

*3 Based on correlated SPT N values and published data. Caution should be exercised when selecting design values for the variable Made Ground Stratum.

*4 Testing on undisturbed samples is recommended to determine the design value of this parameter for detailed design.

NOTE: The values in Table 1 represent a range of recommended values based on the typical soil types, insitu testing and laboratory testing scheduled by the Consulting Engineer. The values presented are recommended for outline guidance only and specific designs should derive design values based on the exploratory hole logs and lab testing for each specific site. To determine specific design values relevant to the design being undertaken in a particular area, reference should be made to the relevant specific exploratory hole logs. Further testing is recommended to determine the specific geotechnical parameters required for foundation design and temporary works design

5.0 Recommendations & Conclusions

5.1. General

The recommendations given and opinions expressed in this report are based on the findings as detailed in the exploratory hole records. Where an opinion is expressed on the material between exploratory hole locations, this is for guidance only and no liability can be accepted for its accuracy. No responsibility can be accepted for conditions which have not been revealed by the exploratory holes. Limited information has been provided at the ground investigation stage and any designs based on the recommendations or conclusions should be completed in accordance with the current design codes, taking into account the variation and the specific details contained within the exploratory hole logs.

5.2. Foundations

The proposed scheme is thought to consist of a series of different units comprising multistorey accommodation, community, and commercial units. No basement excavations are envisaged as part of the development. The variation of the strength and depth of the Made Ground deposits (up to 3.5m BGL) across the site, mean the proposed bearing capacities have been recommended on the shallowest practical depth for the proposed foundations over the northern portion of the site. The shallow depth to rock in the southern portion of the site warrants separate consideration from a foundation point of view, the depth of made ground or soft cohesive deposits over this portion of the site mean it may be more economically to excavate and pour deeper but smaller pads on the intact bedrock below the site. BH08 to BH013 represent a shallow rise in rock level from 5.3m to 5.5m BGL (BH8 – BH10) in the middle to 3.3m to 3.5m BGL (BH12 & BH13) at the southernmost end of the site.

An allowable bearing capacity of 250 kN/m^2 is recommended for conventional strip or pad foundations on the stiff dark grey (black) cohesive deposits which are generally present at a depth of 2.5m BGL across the northern portion of the site with the exceptions noted below. Where granular lenses are encountered within the boulder clay they are advised to be removed and replaced with lean mix trench fill where the structure is founded both on these and the cohesive deposits to avoid problems with differential settlement.

At the locations of BH02, BH08, WS4, WS8, WS20, WS22 & 23 on the northern portion of the site where locally softer or looser deposits are present or where the Made Ground deposits are deeper than 2.5m BGL, lean mix trench fill is recommended to achieve the recommended allowable bearing capacity. The stiff dark grey cohesive deposits are generally between 3.0 to 4.0m BGL at these locations.

In the southern portion of the site, the variable depth of made ground and the presence of soft deposits in the window sample locations an allowable bearing capacity of 1000 kN/m^2 is recommended on the intact competent Limestone/Mudstone rock deposits. Where a significant depth of weathered rock is encountered a reduced allowable bearing capacity of 500 kN/m^2 is recommended. The deeper depths of Made Ground or soft cohesive deposits were present at the locations of BH08, BH09, BH10, BH11, WS27 to WS30, WS34, WS36 to WS38, WS39 & WS44 on the southern portion of the site.

In any part of the site, should part of the foundation on one structural unit be on the bedrock stratum we would recommend that all the foundations of the unit in question be lowered to this competent rock stratum to avoid problems with differential settlement.

Depending on the loading anticipated and the depth of excavation/removal of made ground from the site, piled foundations may be more economically advantageous for the proposed building. The type, size and depth of the pile foundations should be confirmed by a specialist piling contractor based on the loading from the proposed building.

The possibility for variation in the depth of the made ground in the vicinity of these foundations should be considered and foundation inspections should be carried out. Any soft spots encountered at the proposed foundation depths should be excavated and replaced with lean mix concrete.

Due to the depth of Made Ground across the site, the floor slabs are recommended to be suspended, unless there is such an area or structure within the proposed scheme that the firm or firm to stiff cohesive deposits are consistent and less than 0.9m below the proposed slab.

The pH and sulphate testing completed on samples recovered from the exploratory holes indicates the pH results are near neutral and the sulphate results are low, when compared to the guideline values from BRE Special Digest 1:2005. No special precautions are required for concrete foundations to prevent sulphate attack. The samples tested were below the limits of DS1 in the BRE Special Digest 1:2005.

5.3. External Pavements

The proposed pavements are recommended to be designed in accordance with the CBR test results included in the Appendixes of this Report. The low CBR test results indicate that a capping layer or a sufficient depth of crushed stone fill may be required. Plate bearing tests are recommended at the time of construction to verify the design assumptions for the proposed pavement make up and to verify adequate compaction has been achieved.
The use of a geogrid and separation membrane may improve the performance of the proposed pavement and enable a more economical pavement design to be achieved, a specialist supplier is recommended to advise of the required strength, depth and type of geotextile for the proposed design.

5.4. Excavations

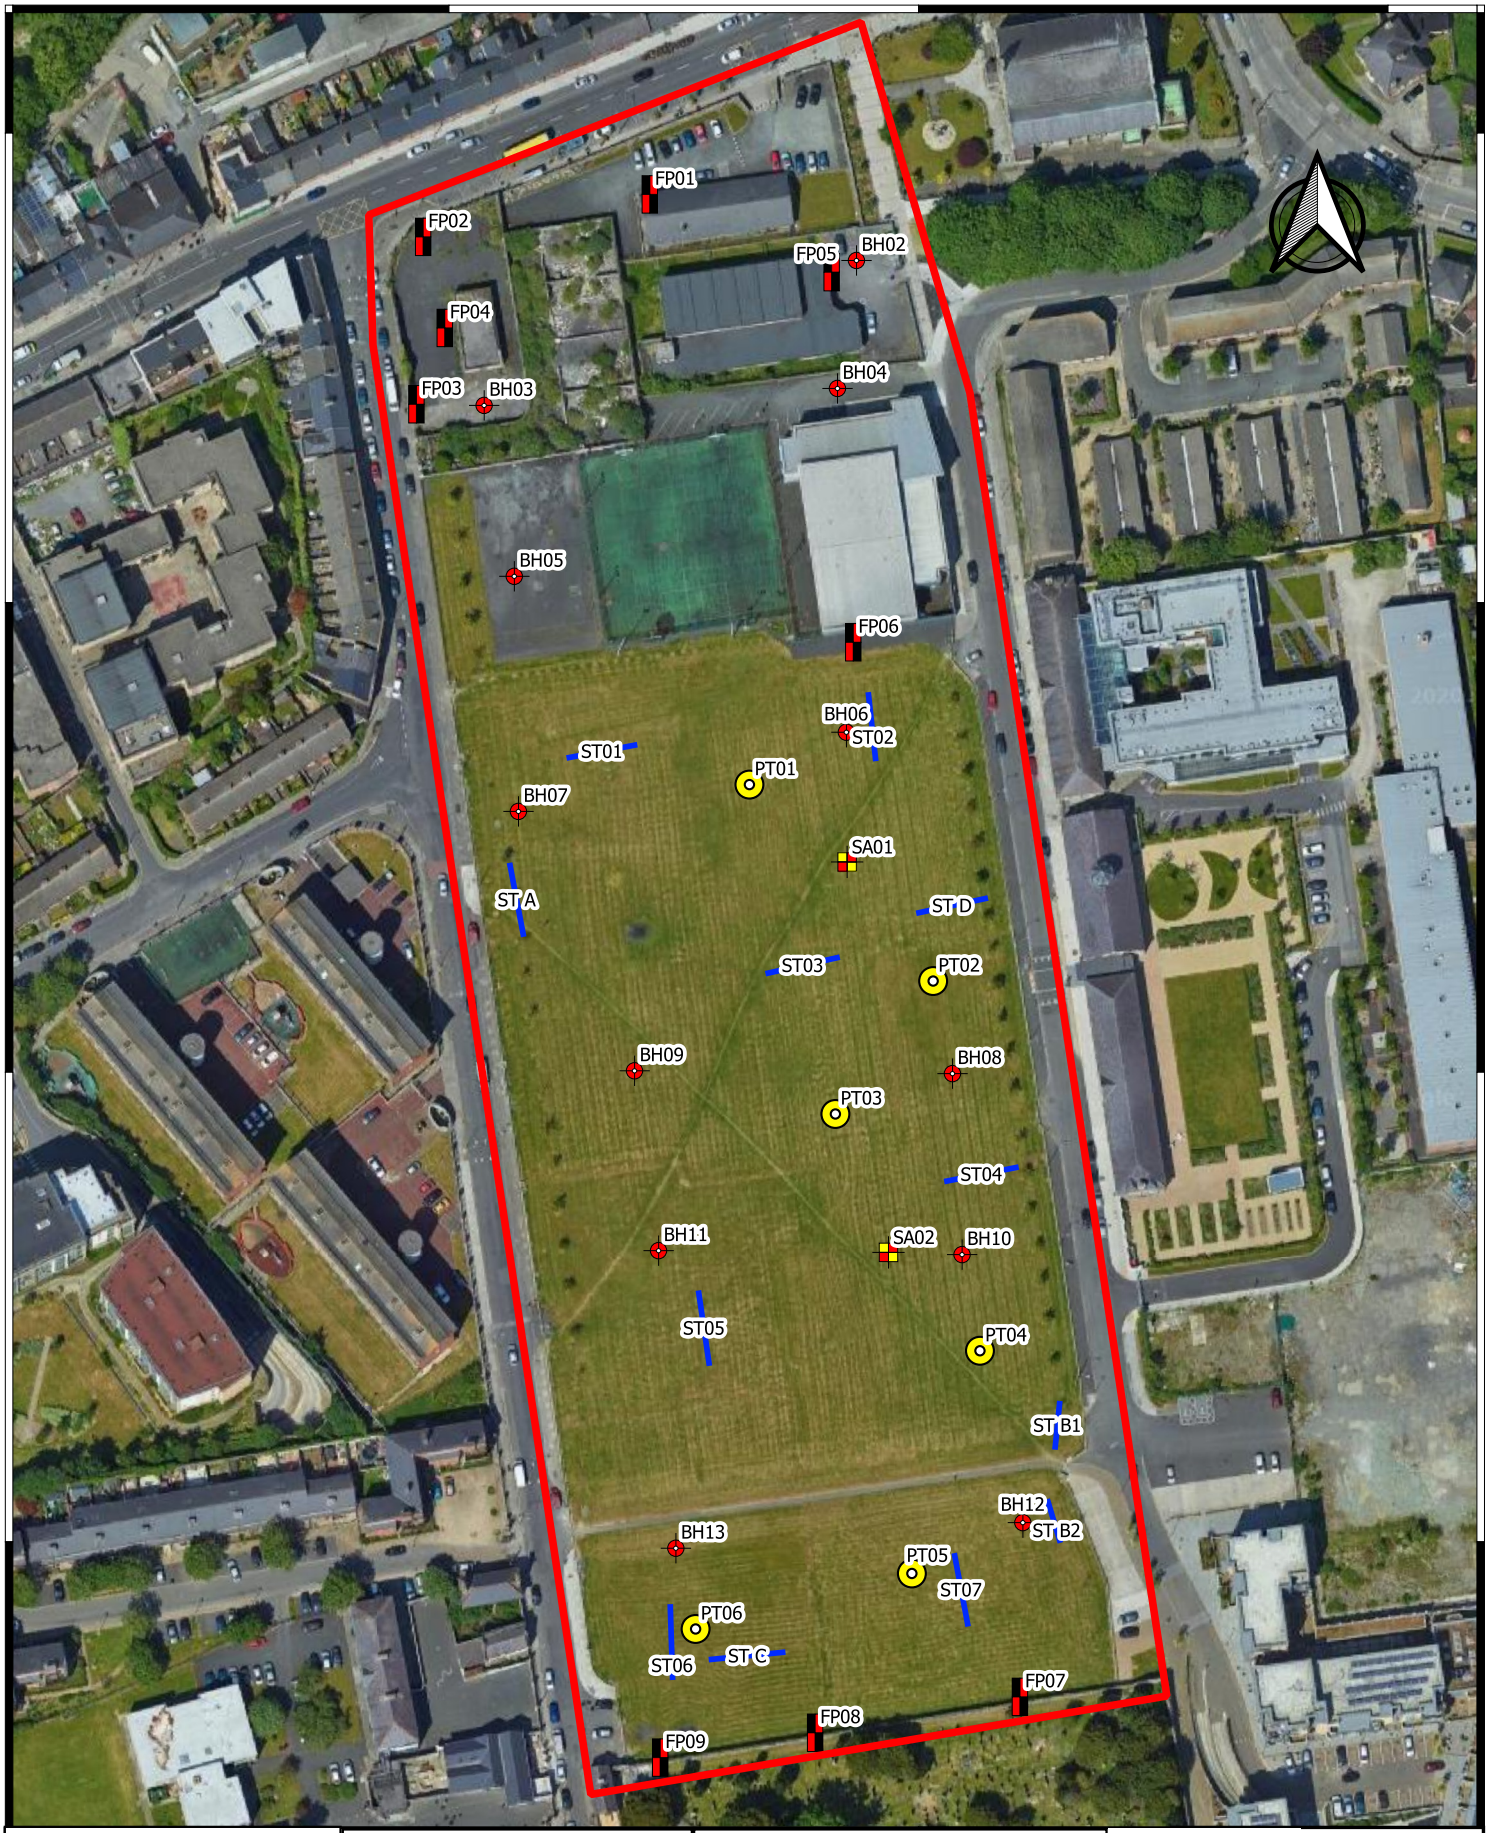
Short term temporary excavations in the cohesive deposits will remain stable for a limited time only and will require to be appropriately battered or the sides supported if the excavation is below 1.25m BGL or is required to permit man entry.
Excavations in the Made Ground or soft Cohesive Deposits will require to be appropriately battered or the sides supported due to the low strength of these deposits.

Any excavations which penetrate the granular deposits will require to be appropriately battered or the sides supported and are likely to require dewatering due to the groundwater seepages noted in the exploratory hole logs in the Appendices of this Report.

The groundwater and stability noted on the trial pit logs should be consulted when determining the most appropriate construction methods for excavations. Generally, where significant excavations are required in water bearing granular deposits a cut-off wall may be more cost effective than extensive dewatering. An assessment by a specialist dewatering contractor is recommended to determine the most cost effective approach to the proposed excavation.

Excavations in the upper cohesive and weathered rock deposits are expected to be excavatable with conventional excavation equipment, with zones of more intact bedrock below this depth requiring rock breaking techniques. Based on the fracture spacing, the rock strength testing and Pettifer & Fookes (1994) Revised Excavatability Graph, the Calp Limestone ranges from hard digging to hard ripping with hydraulic breaking, however the zones recovered as non-intact should be easy to hard digging.

Any waste material to be removed off site should be disposed of to a suitably licenced landfill.



The environmental testing completed during the ground investigation is reported under the cover of a separate OCSC Environmental Report.

5.5. Soakaway Design

At the locations of SA01 and SA02 the water level dropped too slowly to allow calculation of ‘f’ the soil infiltration rate. These locations are therefore not recommended as suitable for soakaway design and construction.

The recommendations provided in this report should be verified in the design of the proposed buildings, using the full details of the loading conditions and taking into consideration the allowable tolerable settlements/movements that the building can accommodate. The founding strata should be inspected and verified by a suitably qualified engineer prior to construction of the building foundations.

Issue :	2

Sixteen samples were received for analysis on 23rd October, 2020 of which sixteen were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

Note:

Asbestos Screen analysis is carried out in accordance with our documented in-house methods PM042 and TM065 and HSG 248 by Stereo and Polarised Light Microscopy using Dispersion Staining Techniques and is covered by our UKAS accreditation. Detailed Gravimetric Quantification and PCOM Fibre Analysis is carried out in accordance with our documented in-house methods PM042 and TM131 and HSG 248 using Stereo and Polarised Light Microscopy and Phase Contrast Optical Microscopy (PCOM). Samples are retained for not less than 6 months from the date of analysis unless specifically requested.

Opinions, including ACM type and Asbestos level less than 0.1%, lie outside the scope of our UKAS accreditation.

Where the sample is not taken by a Element Materials Technology consultant, Element Materials Technology cannot be responsible for inaccurate or unrepresentative sampling.

Matrix : Solid

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
20/14172	1	BH03	0.80-1.00	1-3	Cyanide, LOI, Phenols, Tot SO4	Sample holding time exceeded
20/14172	1	BH03	3.00-3.40	4-6	Cyanide, LOI, Phenols, Tot SO4	Sample holding time exceeded

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.

Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/14172

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

EMT Job No: 20/14172

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.	PM0	No preparation is required.			AR	
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM16	Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR	
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM8/PM16	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required/Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM8/PM16	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required/Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.	Yes		AR	Yes
TM5/TM36	please refer to TM5 and TM36 for method details	PM8/PM12/PM16	please refer to PM8/PM16 and PM12 for method details			AR	Yes
TM17	Modified US EPA method 8270D v5:2014. Determination of specific Polychlorinated Biphenyl congeners by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM20	Modified BS 1377-3:1990/USEPA 160.1/3 (TDS/TS: 1971) Gravimetric determination of Total Dissolved Solids/Total Solids	PM0	No preparation is required.	Yes		AR	Yes
TM21	Modified BS 7755-3:1995, ISO10694:1995 Determination of Total Organic Carbon or Total Carbon by combustion in an Eltra TOC furnace/analyser in the presence of oxygen. The CO2 generated is quantified using infra-red detection. Organic Matter (SOM) calculated as per EA MCERTS Chemical Testing of Soil, March 2012 v4.	PM24	Dried and ground solid samples are washed with hydrochloric acid, then rinsed with deionised water to remove the mineral carbon before TOC analysis.	Yes		AD	Yes

EMT Job No: 20/14172

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
TM22	Modified BS1377-3:1990 Gravimetric determination of Loss on Ignition by temperature controlled Muffle Furnace (35C-440C). On request modified ASTM D2974-00 LOI (105C-440C)	PM0	No preparation is required.	Yes		AD	Yes
TM26	Determination of phenols by Reversed Phased High Performance Liquid Chromatography and Electro-Chemical Detection.	PM0	No preparation is required.			AR	Yes
TM26	Determination of phenols by Reversed Phased High Performance Liquid Chromatography and Electro-Chemical Detection.	PM21B	As Received samples are extracted in Methanol: Water (60:40) by reciprocal shaker.	Yes		AR	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM15	Acid digestion of dried and ground solid samples using Aqua Regia refluxed at 112.5 °C. Samples containing asbestos are not dried and ground.			AD	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM15	Acid digestion of dried and ground solid samples using Aqua Regia refluxed at 112.5 °C. Samples containing asbestos are not dried and ground.	Yes		AD	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM17	Modified method BS EN12457-2:2002 As received solid samples are leached with water in a 10:1 water to soil ratio for 24 hours, the moisture content of the sample is included in the ratio.	Yes		AR	Yes
TM36	Modified US EPA method 8015B v2:1996. Determination of Gasoline Range Organics (GRO) in the carbon chain range of C4-12 by headspace GC-FID. MTBE by GCFID co-elutes with 3-methylpentane if present and therefore can give a false positive. Positive MTBE results will be re-run using GC-MS to double check, when requested.	PM12	Modified US EPA method 5021A v2:2014. Preparation of solid and liquid samples for GC headspace analysis.			AR	Yes
TM36	Modified US EPA method 8015B v2:1996. Determination of Gasoline Range Organics (GRO) in the carbon chain range of C4-12 by headspace GC-FID. MTBE by GCFID co-elutes with 3-methylpentane if present and therefore can give a false positive. Positive MTBE results will be re-run using GC-MS to double check, when requested.	PM12	Modified US EPA method 5021A v2:2014. Preparation of solid and liquid samples for GC headspace analysis.	Yes		AR	Yes
TM38	Soluble Ion analysis using Discrete Analyser. Modified US EPA methods: Chloride 325.2 (1978), Sulphate 375.4 (Rev.2 1993), o-Phosphate 365.2 (Rev.2 1993), TON 353.1 (Rev.2 1993), Nitrite 354.1 (1971), Hex Cr 7196A (1992), NH4+ 350.1 (Rev.2 1993 (comparabl	PM0	No preparation is required.	Yes		AR	Yes
TM38	Soluble Ion analysis using Discrete Analyser. Modified US EPA methods: Chloride 325.2 (1978), Sulphate 375.4 (Rev.2 1993), o-Phosphate 365.2 (Rev.2 1993), TON 353.1 (Rev.2 1993), Nitrite 354.1 (1971), Hex Cr 7196A (1992), NH4+ 350.1 (Rev.2 1993 (comparabl	PM20	Extraction of dried and ground or as received samples with deionised water in a 2:1 water to solid ratio using a reciprocal shaker for all analytes except hexavalent chromium. Extraction of as received sample using 10:1 ratio of 0.2M sodium hydroxide to soil for hexavalent chromium using a reciprocal shaker.	Yes		AR	Yes

EMT Job No: 20/14172

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
TM50	Acid soluble sulphate (Total Sulphate) analysed by ICP-OES	PM29	A hot hydrochloric acid digest is performed on a dried and ground sample, and the resulting liquor is analysed.	Yes		AD	Yes
TM60	TC/TOC analysis of Waters by High Temperature Combustion followed by NDIR detection. Based on the following modified standard methods: USEPA 9060A (2002), APHA SMEWW 5310B:1999 22nd Edition, ASTM D 7573, and USEPA 415.1.	PM0	No preparation is required.			AR	Yes
TM61	Determination of Mercury by Cold Vapour Atomic Fluorescence - WATERS: Modified USEPA Method 245.7, Rev 2, Feb 2005. SOILS: Modified USEPA Method 7471B, Rev.2, Feb 2007	PM0	No preparation is required.	Yes		AR	Yes
TM65	Asbestos Bulk Identification method based on HSG 248 First edition (2006)	PM42	Modified SCA Blue Book V.12 draft 2017 and WM3 1st Edition v1.1:2018. Solid samples undergo a thorough visual inspection for asbestos fibres prior to asbestos identification using TM065.	Yes		AR	
TM73	Modified US EPA methods 150.1 (1982) and 9045D Rev. 4 - 2004) and BS1377-3:1990. Determination of pH by Metrohm automated probe analyser.	PM0	No preparation is required.			AR	Yes
TM73	Modified US EPA methods 150.1 (1982) and 9045D Rev. 4 - 2004) and BS1377-3:1990. Determination of pH by Metrohm automated probe analyser.	PM11	Extraction of as received solid samples using one part solid to 2.5 parts deionised water.	Yes		AR	No
TM74	Analysis of water soluble boron (20:1 extract) by ICP-OES.	PM32	Hot water soluble boron is extracted from dried and ground samples using a 20:1 ratio.	Yes		AD	Yes
TM89	Modified USEPA method OIA-1667 (1999). Determination of cyanide by Flow Injection Analyser. Where WAD cyanides are required a Ligand displacement step is carried out before analysis.	PM45	As received solid samples are extracted with 1M NaOH by orbital shaker for Cyanide, Sulphide and Thiocyanate analysis.	Yes		AR	Yes
TM107	Determination of Sulphide/Thiocyanate by Skalar Continuous Flow Analyser	PM45	As received solid samples are extracted with 1M NaOH by orbital shaker for Cyanide, Sulphide and Thiocyanate analysis.			AR	Yes
TM108	Determination of Elemental Sulphur by Reversed Phase High Performance Liquid Chromatography with Ultra Violet spectroscopy.	PM114	End over end extraction of dried and crushed soil samples for organic analysis. The solvent mix varies depending on analysis required			AD	Yes

EMT Job No: 20/14172

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
TM173	Analysis of fluoride by ISE (Ion Selective Electrode) using modified ISE method 9214 - 340.2 (EPA 1998)	PM0	No preparation is required.			AR	Yes
NONE	No Method Code	NONE	No Method Code			AD	Yes
NONE	No Method Code	PM17	Modified method BS EN12457-2:2002 As received solid samples are leached with water in a 10:1 water to soil ratio for 24 hours, the moisture content of the sample is included in the ratio.				
NONE	No Method Code	PM17	Modified method BS EN12457-2:2002 As received solid samples are leached with water in a 10:1 water to soil ratio for 24 hours, the moisture content of the sample is included in the ratio.			AR	
NONE	No Method Code	PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.			AR

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.

Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/14656

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

EMT Job No: 20/14656

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.	PM0	No preparation is required.			AR	
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM16	Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR	
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM8/PM16	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required/Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM8/PM16	End over end extraction of solid samples for organic analysis. 1. INTRODUCTION

1.1. Project Contractual Basis & Parties Involved

This report has been prepared by O'Connor Sutton Cronin & Associates Ltd. (OCSC) at the request of their Client, Dublin City Council (DCC) as part of the Civil & Structural Engineering scope of services for the proposed development. The site for assessment is at Emmet Road in Inchicore, Dublin 8 and currently comprises a grass field (demolished former residential estate), a recreational club building, an employment building centre, and a health community centre. For the purposes of the planning application the site includes an area of watermain upgrades along Emmet Road as shown in Figure 1.1. However for the purpose of this Generic Quantitative Risk Assessment (GQRA) only the main site within red line area of the site has been investigated and assessed.

The field assessment and reporting were undertaken by Kate Santos, Environmental Engineer with OCSC and Glenda Barry, Principal Consultant with OCSC and approved by Eleanor Burke, Chartered Scientist (CSci), Member of the Institution of Environmental Sciences (MIEnvSc), and the Environmental Division Manager of OCSC.

1.2. Background Information

The red line site is located in Inchicore adjacent to various recreational, retail, residential and commercial facilities (refer to Figure 1.1). The site area extends across c. 3.8 hectares of land and is bounded by Emmet Road (R810) to the north, Patriot's Path and St. Michael's Estate Road to the east, a protected stone boundary wall and Goldenbridge Cemetery to the south, and St. Vincent's Street West to the west.

Figure 1.1: Site Location (approximate boundary in red; Source: OSI, 2022)

The central and southern area of the site consists of the former St. Michael's Estate (Dublin City Council Social Housing) which has been demolished and exists now as open space. The northern section of the site consists of a number of structures that will be demolished, including St. Michael's Community Centre and the EVE Tuiscint Health Centre, under a separate Part 8 planning application. Another building, the Celtic Pigeon Club, was located on the northern section of the site but was demolished in November 2020. The Inchicore Community Sports Centre does not form part of the planning application.

The area of proposed watermain upgrade works extends along Emmet Road from the northweastern portion of the site west to the junction with Tyrconnell Road and does not form part of this assessment.

The site is relatively flat with a fall from south to north of approximately 6m. The topographic map is included in Appendix B. The centre of the site is at Ordnance Survey of Ireland (OSI) ITM reference 712063E, 733325N.

Figure 1.2: Aerial image of the site with indicative boundary. Source: Google Earth, 2021)

1.3. Proposed Development

The proposed development includes a mixed used development of 578 no. apartments in addition to commercial, retail and community facilities and associated infrastructure, including roads, footpaths, services and landscaping. A basement is not proposed as part of the development works although an approximately 530m2, full-storey height area of below ground plant space is proposed for the development.

The central and southern area of the site consists of the former St. Michael's Estate (Dublin City Council Social Housing) which has been demolished and exists now as open space. The northern section of the site consists of a number of structures that will be demolished, including St. Michael's Community Centre and the EVE Tuiscint

Health Centre, under a separate Part 8 planning application. Another building, the Celtic Pigeon Club, was located on the northern section of the site but was demolished in November 2020. The Inchicore Community Sports Centre does not form part of the planning application. The current proposed site layout is shown in Figure 1.3.

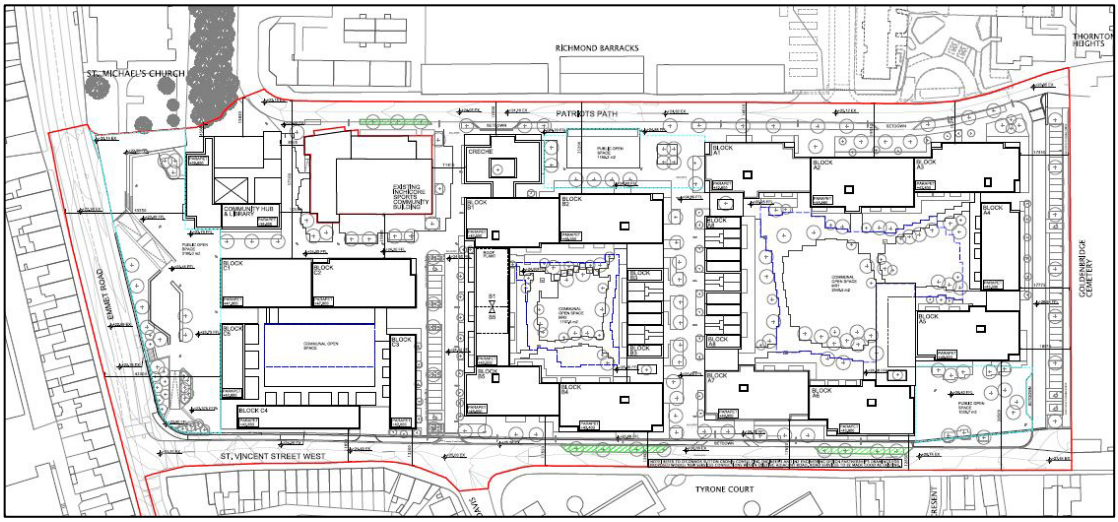

Figure 1.3 Proposed Site Layout (Source: Bucholz McEvoy Architects)

1.4. Project Objectives

The overall project objectives include:

- Provide environmental information on the site including its environmental setting, past activities, and current soil quality in terms of contamination;
- Undertake a Generic Quantitative Risk Assessment to establish whether there is any material onsite that could present a risk to human health of future residential occupiers; and
- Assess any obvious environmental liabilities and potential risk to future site users.

1.5. Methodology and Approach

The methodology and approach for the proposed work will follow:

- BS 10175:2011+A2:2017, Investigation of potentially contaminated sites, Code of Practice;
- EPA, 2020, Guidance on waste acceptance criteria at authorised soil recovery facilities;
- EPA 2013, Guidance on the Management of Contaminated Land and Groundwater at EPA Licensed Sites;
- EPA 2007, Code of Practice, Environmental Risk Assessment for Unregulated Waste Disposal Sites;
- EA, 2020, Land contamination risk management (LCRM);

- The LQM/CIEH S4ULs for Human Health Risk Assessment (2015);
- SP1010 – Development of Category 4 Screening Levels for Assessment of Land Affected by Contamination CL:AIRE (2014);
- EIC/AGS/CL:AIRE Soil Generic Assessment Criteria for Human Health Risk Assessment (2010);
- 2010 European Communities Environmental Objectives (Groundwater) Regulations (Statutory Instrument No. 9 of 2010);
- 2016 European Communities Environmental Objectives (Groundwater) (Amendment) Regulations (Statutory Instrument No. 366 of 2016);
- EPA (2003) Towards Setting Guideline Values for the Protection of Groundwater in Ireland (2003);
- Environmental Liability Regulations (S.I. 547 of 2008);
- Environment Agency (2000) Guidance on the Assessment and Monitoring of Natural Attenuation of Contaminants in Groundwater;
- DoELG, EPA and GSI, 1999. Groundwater Protection Schemes. Department of Environment and Local Government, Environmental Protection Agency and Geological Survey of Ireland, Dublin, Ireland.

1.6. Scope of Works

To meet the project objectives the following scope of works were completed:

- Undertake and record a site visit and walkover including reference to readily available local information; specifically obtaining information regarding storage of deleterious materials or potential contamination related to historical operations on site;
- Obtain, where possible, records of past spillages which could potentially have impacted upon the soil and/or groundwater, and any environmental reports on the site's historic operations and condition;
- Present a discussion of the current site status and key environmental influences around the site;
- Undertake and present a historical site and area review, primarily referring to old Ordnance Survey Maps but utilising other sources as appropriate and readily available;
- Identify requirements for an environmental site investigation;
- Present a discussion of the general soil and groundwater conditions within the topographical and area context;
- Review of analytical data of soil sampled on-site at selected locations;
- Complete a Generic Quantitative Risk Assessment for 'Residential' and 'Public Open Space (Resi)' and 'Commercial' land use; and

Based on the results of the above assessment the requirement for further detailed site investigation, mitigation measures or more site specific Detailed Quantitative Risk Assessment (DQRA) will be discussed.

1.7. Limitations

This Generic Quantitative Risk Assessment (GQRA) Report has been prepared for the sole use Dublin City Council ("the Client") as part of the Civil & Structural Engineering scope of services for the proposed development. No other warranty, expressed or implied, is made as to the professional advice included in this report or any other services provided by OCSC. This Report is confidential and may not be disclosed by the Client nor relied upon by any other party without the prior and express written agreement of OCSC.

This assessment is based on a review of available historical information, environmental records, consultations, relevant information and reports from third parties. All information received has been taken in good faith as being true and representative. There was lack of accessibility to a former halting site area, located directly east adjacent to the former Pigeon Club building. In addition, the area of proposed watermain upgrade works along Emmet Road has not been assessed as part of the site investigation or this GQRA.

This report has been prepared in line with best industry standards. The methodology adopted and the sources of information used by OCSC in providing its services are outlined in this Report. The scope of this Report and the services are accordingly factually limited by these circumstances.

OCSC disclaim any undertaking or obligation to advise any person of any change in any matter affecting the Report, which may come or be brought to OCSC's attention after the date of the Report.

The conclusions presented in this report represent OCSC's best professional judgement based on a review of site conditions observed and the relevant information available at the time of writing. The opinions and conclusions presented are valid only to the extent that the information provided was accurate and complete.

2. ENVIRONMENTAL SITE SETTING

2.1. Site Location

The site location is in Inchicore, Dublin 8 and comprises of a vacant grass field (former St. Michaels Estate), a former halting site, and a number of structures that will be demolished under a separate Part 8 planning application including St. Michael's Community Centre and the EVE Tuiscint Health Centre. The regional site location is illustrated on Figure 2.1 by the red star.

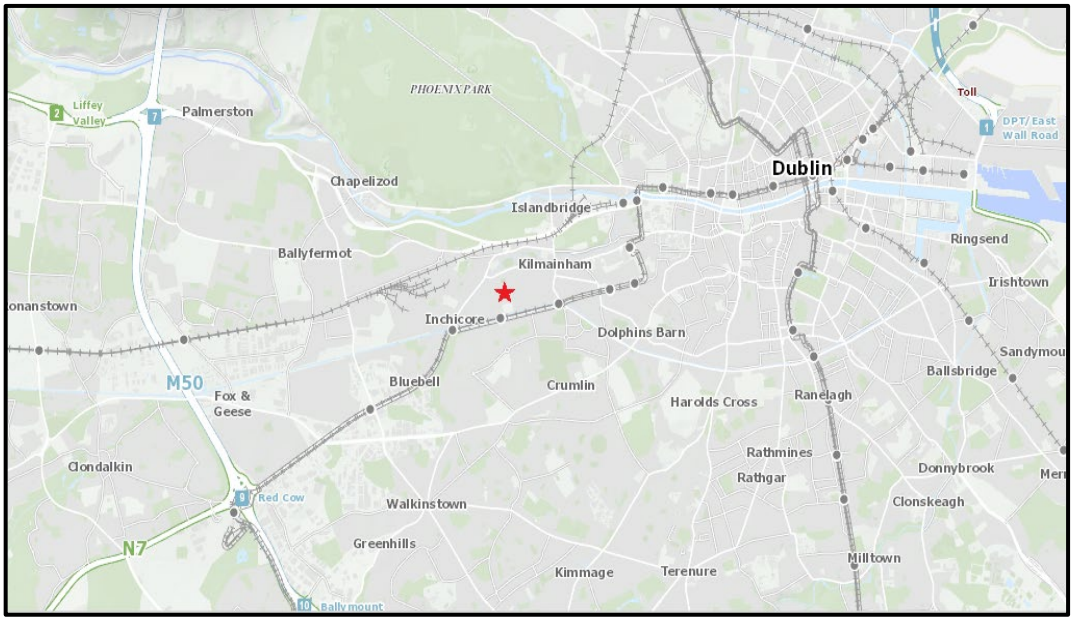

Figure 2.1 Regional Site Location (approximate site location indicated by red star. Source: OSI, 2021)

2.2. Surrounding Land Use

The surrounding area is residential with a mixture of residential, recreational and commercial/retail buildings.

The site's surrounding area is urban in nature. North of the site are Emmet Road (R810), residential and commercial structures, Grattan Crescent Park and Richmond Park. East of the site is Patriots Path, St Michael's Estate Road, Saint Michael`s Church, Bulfin Court Day Centre, residential buildings, Inchicore Primary Care Centre, and Richmond Barracks Cultural Centre with associated gardens and a vacant site. Further east are residential structures. South of the site are Goldenbridge Cemetery and the Common Ground Art building. Further south are the Grand Canal, the Luas Line transport link (red line), Davitt Road (R812) and residential buildings. West of the site are St. Vincent Street West, residential buildings, commercial businesses, and retail outlets.Refer to Figure 1.2 in Section 1 for an aerial photograph of the site. The adjacent land uses are listed in Table 2.1 below.

Table 2.1 – Adjacent Land Uses

BOUNDARY	LAND USE
North	Emmet Road (R810), residential and commercial structures, Grattan Crescent Park and Richmond Park.
East	Patriot's Path, St. Michael's Estate Road, Saint Michael`s Church, Bulfin Court Day Centre, residential buildings, Inchicore Primary Care Centre, Richmond Barracks Cultural Centre with associated gardens, a vacant site.
South	Goldenbridge Cemetery, Common Ground Art building, The Grand Canal, The Luas line transport link (red line), Davitt Road (812), residential buildings.
West	St. Vincent Street West, residential buildings, commercial and retail businesses.

2.3. Site History

An understanding of the site history was gained by undertaking a review of the following primary sources including:

- Review of available extracts of historical Ordnance Survey of Ireland (OSI) maps at http://map.geohive.ie/mapviewer.html;
- Review of information held by the Environmental Protection Agency (EPA) EnVision online Mapping at https://gis.epa.ie/EPAMaps/;
- Aerial images available of the site (Google Earth and Google Maps);
- Historical Maps available at Ordnance Survey Ireland (OSI) https://webapps.geohive.ie/mapviewer/index.html;
- Geological Survey of Ireland (GSI) online map tool at https://dcenr.maps.arcgis.com/apps/MapSeries/index.html;
- National Parks and Wildlife Service online map tool at https://dahg.maps.arcgis.com/apps/webappviewer/index.html?id=8f7060450de3485fa1c1085536d477ba;
- Richmond Barracks history website at http://www.richmondbarracks.ie/history/keogh-square/; and
- Michael O'Flanagan's "The History of Kilmainham and Inchicore".

2.4. Site Development

The following section outlines the historically mapped features in the immediate environs of the site.

The 6" historical map dated 1837-1842 shows the site as part of the western portion of the Richmond Barracks, a military complex inside the Goldenbridge North Townland. The site is comprised of building structures along the perimeter of the site with an open area in the centre.

To the east boundary of the site was the eastern portion of Richmond Barracks military camp buildings, vacant lots, and several estates. To the north of the site is a roadway; a vacant lot; a mill race, mill pond, and river; and a woolen mill. To the south of the site is a cemetery with a chapel, a guard house, and the Grand Canal. To the southeast of the site was an extension of the military camp area and the Mount Shannon Mills on the south side of the canal. To the west of the site were probable residential buildings and gardens, vacant lots, a roadway, a school, a meeting house, and a paper mill.

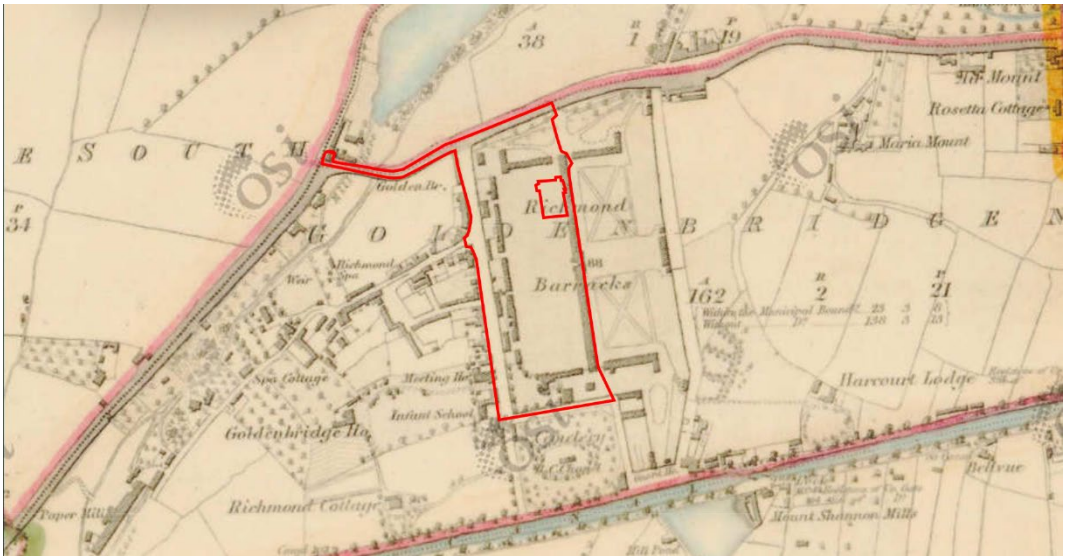

Figure 2.2. Approximate site boundary indicated by red line on a 6 inch historical map dated 1837-1842 (Source: OSI, 2021).

The 25" historical map (1888-1913) (Figure 2.3) shows the site as largely unchanged from the previous mapping except for the construction of a number of small buildings along the northern and western boundaries of the site. including a Church in the northeast.

The main road on the north boundary was identified as Emmet Road. A tramway, and houses had been constructed to the north of the site and a church to the northeast. Additional buildings had been constructed to the east within Richmond Barracks and along Emmet Road to the east of the barracks. Limited additional development had occurred to the southeast of the site on both sides of the canal. Development to the west of the site included a tramway depot, two industrial schools, two additional schools, St. Vincent's Roman Catholic Church, and residences.

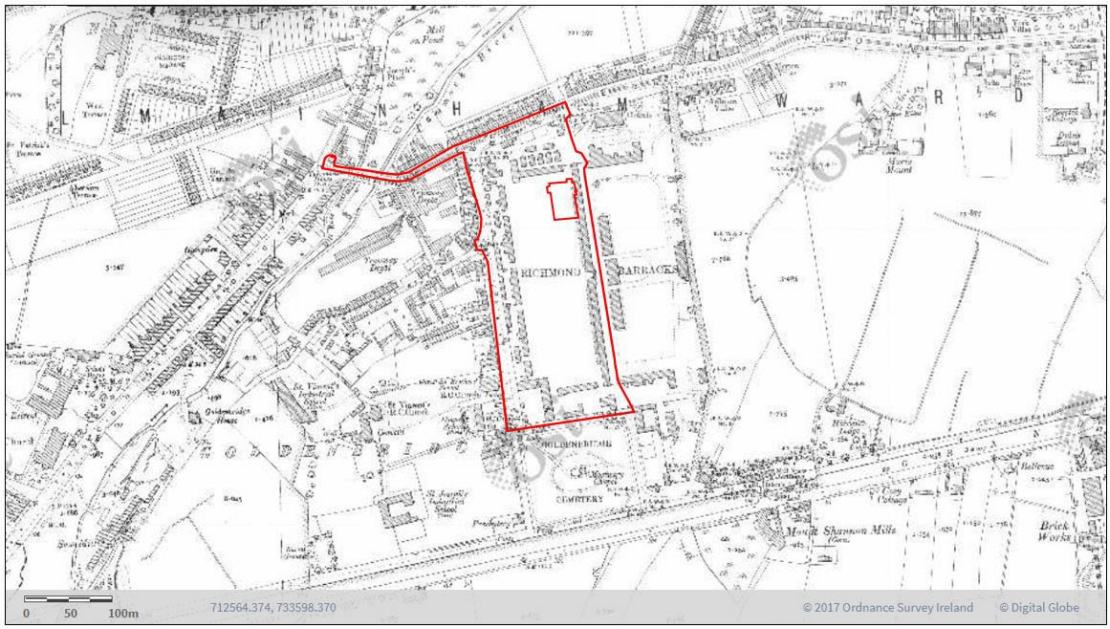

Figure 2.3. Approximate site boundary indicated by red line on historic 25 inch map (1888-1913) (OSI, 2021)

The 6" Cassini historical map (Figure 2.4) identifies a change to the layout of Richmond Barracks with the removal of buildings along the northern and western boundaries of the site and the construction of a large building in the south-central portion of the site and Keogh Square in the north-central portion of the site.

The tramlines along Emmet Road were no longer shown to the north, but Richmond Park had been constructed to the north along with additional residential structures. A school was noted within the barracks to the east. Extensive residential development had occurred further to the east. To the south of the site a mill pond had been infilled and a paint and varnish factory constructed on the south side of the Grand Canal along with extensive residential construction. To the west of the site a chassis works and omnibus works had replaced the tramway depots and a saw mill had been constructed.

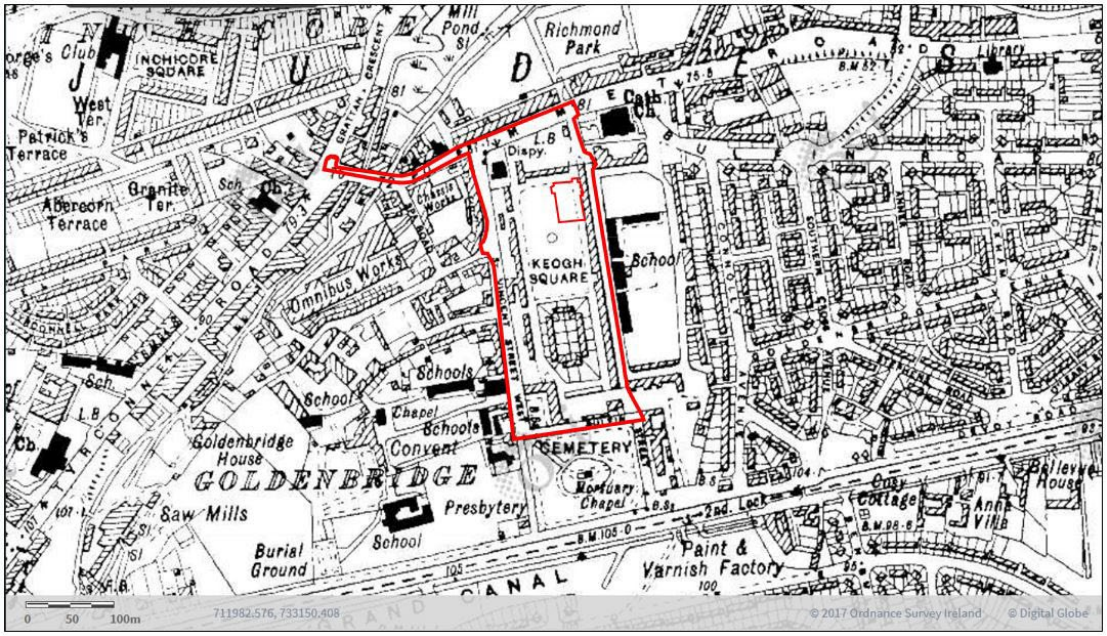

Figure 2.4. Approximate site boundary indicated by red line on a 6 inch Cassini map (1830 - 1930) (Source: OSI, 2021)

Keogh Square was replaced with St. Michael's Estate (residential) which was opened in 1969 and consisted of seven apartments/flat buildings and open areas within the site. A review of the Ordnance Survey Ireland aerial images from 1995 (see Figure 2.5) and 2000 (refer to Figure 2.6) indicate that the site area had undergone significant changes since the 6" Cassini historical mapping including the construction of St. Michael's Estate and associated infrastructure. The northern section of the site was occupied by playing yards, a halting site east adjacent to the Pigeon Club, and three additional structures. North of the site, the mill pond had been infilled and converted into an open green area. East of the site, residential structures, Richmond Barracks Museum, and Hollybrook Lodge Residential Units had replaced the school. Additional construction had also occurred to the south and west of the site.

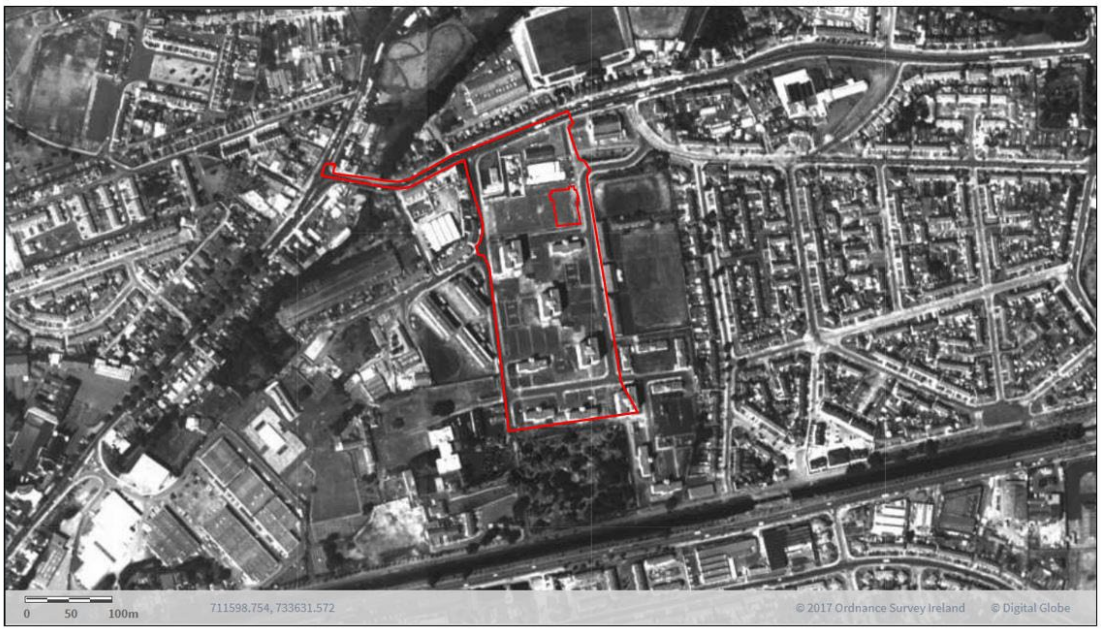

Figure 2.5. Approximate site boundary indicated by red line on 1995 aerial image (Source: OSI, 2021)

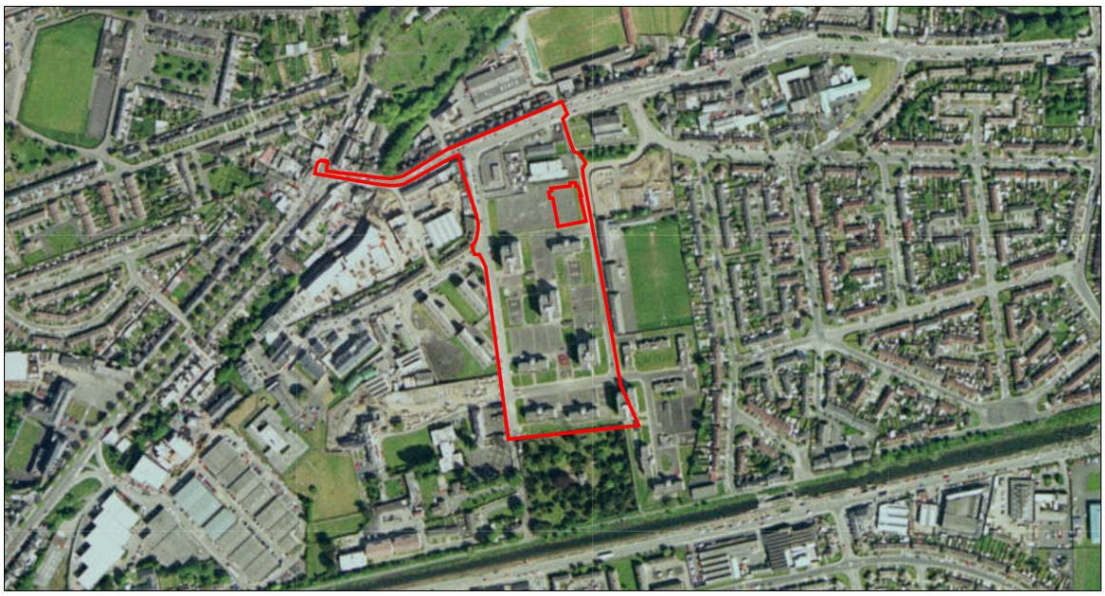

Figure 2.6. Approximate site boundary indicated by red red line on the 2000 aerial image (Source: OSI, 2021)

The aerial image dated 2005 - 2012 (refer to Figure 2.7) shows that three of the seven buildings of the St. Michael's Estate had been demolished.

Development of residential housing is visible at Bulfin Court. The residential properties which bound the barracks to the south had undergone demolition since 2000.

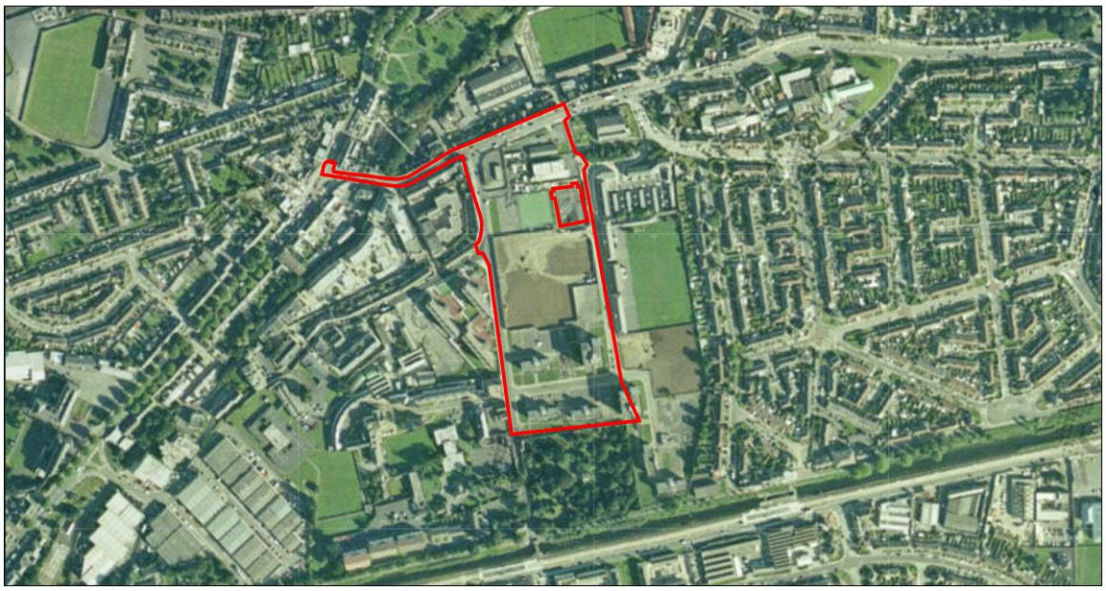

Figure 2.7. Approximate site boundary indicated by red red line on the 2005-2012 aerial image (Source: OSI, 2021)

Analysis of aerial image from 2013 – 2018 (refer to Figure 2.8) shows the site in its current form with the St. Michaels estate fully demolished thereby leaving open space which remains now as a grass field. On the north of the site, the Inchicore Community Sports Centre had been built, one of the northern buildings was partially demolished, and the other three buildings remain similar to what they were in the aerial images dated 2005 - 2012 (refer to Figure 1.2). The halting site was depicted as demolished.

Figure 2.8. Approximate site boundary indicated by red line on the 2013-2018 aerial image (Source: OSI, 2021)

2.5. Site Physical Setting

Information regarding the site topography, hydrology, geology, hydrogeology, and ecology of the area has been obtained from records held by the Geological Survey of Ireland (GSI), Environmental Protection Agency (EPA) Envision online mapping tool, Ordnance Survey of Ireland (OSI), Water Framework Directive Maps and National Parks and Wildlife Service (NPWS) databases.

2.5.1 Topography

The topography of the site varies from 28.70mAOD in the southwest corner to 22.81mAOD in the northern end.

Contour lines decrease from southwest to northeast. Land survey and elevation maps for existing and nearby buildings and for adjacent streets are in Appendix B.

2.5.2 Area of Geological Interest

GSI online mapping service was consulted regarding areas of geological interest in the area of the site. The nearest area of geological heritage is the Phoenix Park (site code DC009) which is located approximately 0.9 km north of the site. The site comprises an extensive natural landscape scanning out over an area of 707 hectares (ha). The site is designated due to the complexity of the native glacial sediments. Refer to Figure 2.9 from the GSI online mapping for further information.

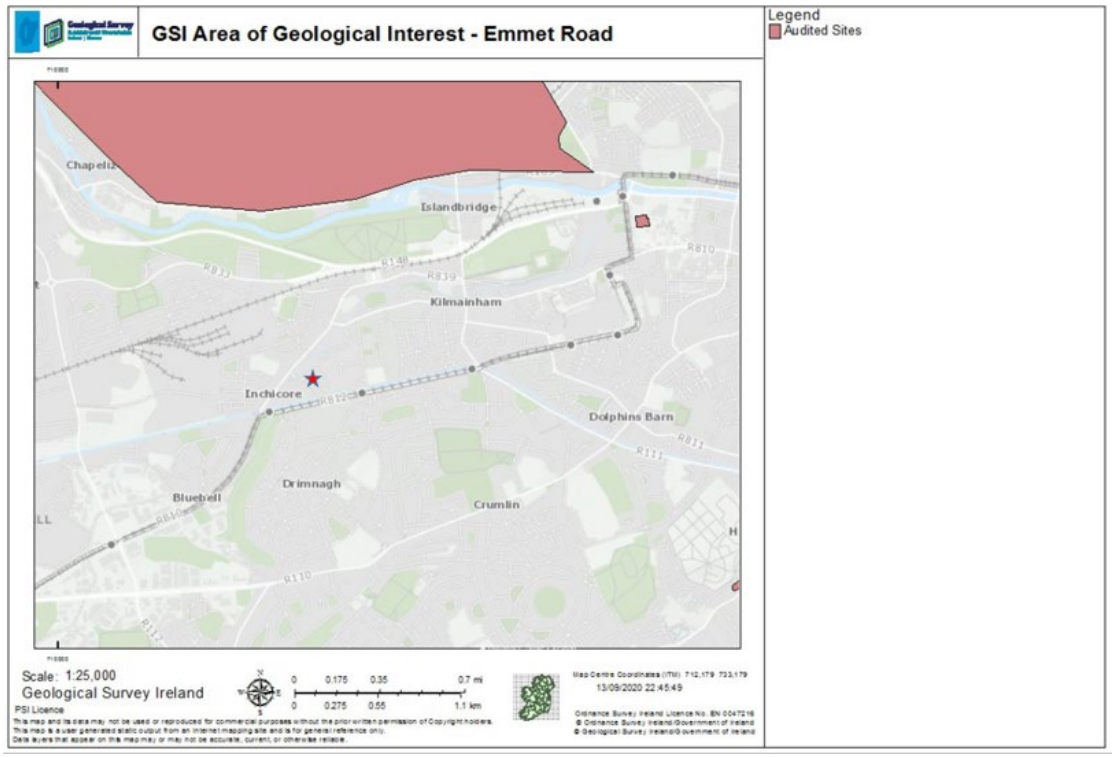

Figure 2.9 Area of Geological Interest (Approximate site location indicated by the red star) (Source: GSI, 2020)

2.5.3 Topsoil

The topsoil beneath the site and the immediately surrounding area have been classified as made ground. Refer to Figure 2.10 from the GSI online mapping for further information.

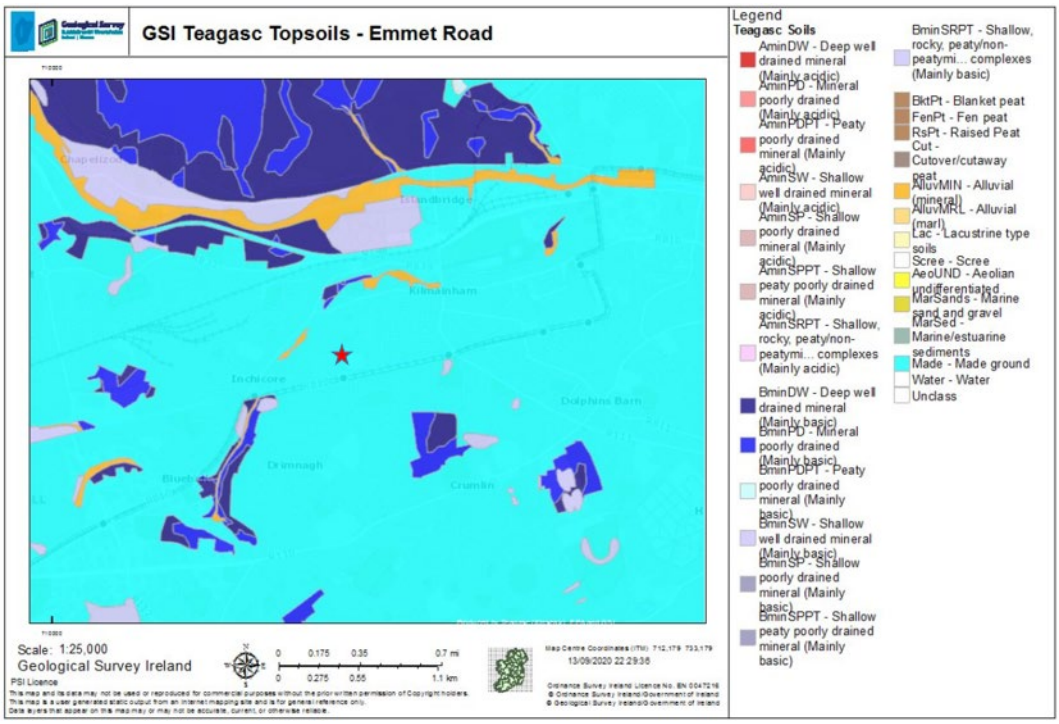

Figure 2.10. Teagasc Topsoils (Approximate site location indicated by the red star) (Source: GSI, 2020)

2.5.4 Unconsolidated Geology

"The Quaternary geology of Ireland – Sediments Map is a representation of the surficial geology of Ireland at a scale of 1 to 50,000. The map shows the sediments mapped within one meter of the surface which were laid down during the Quaternary Period, bedrock at or close to the surface, water bodies, or made ground. Quaternary sediments are categorised according to their genesis. The main types of sediment recognised are tills, (glacio) fluvio/lacustrine deposits, alluvium, lacustrine sediments, and peat. Bedrock and karstified bedrock at or close to the surface are also mapped out as separate units. The Quaternary sediments have been described beneath the site as `tills derived from limestones`. Refer to Figure 2.11.

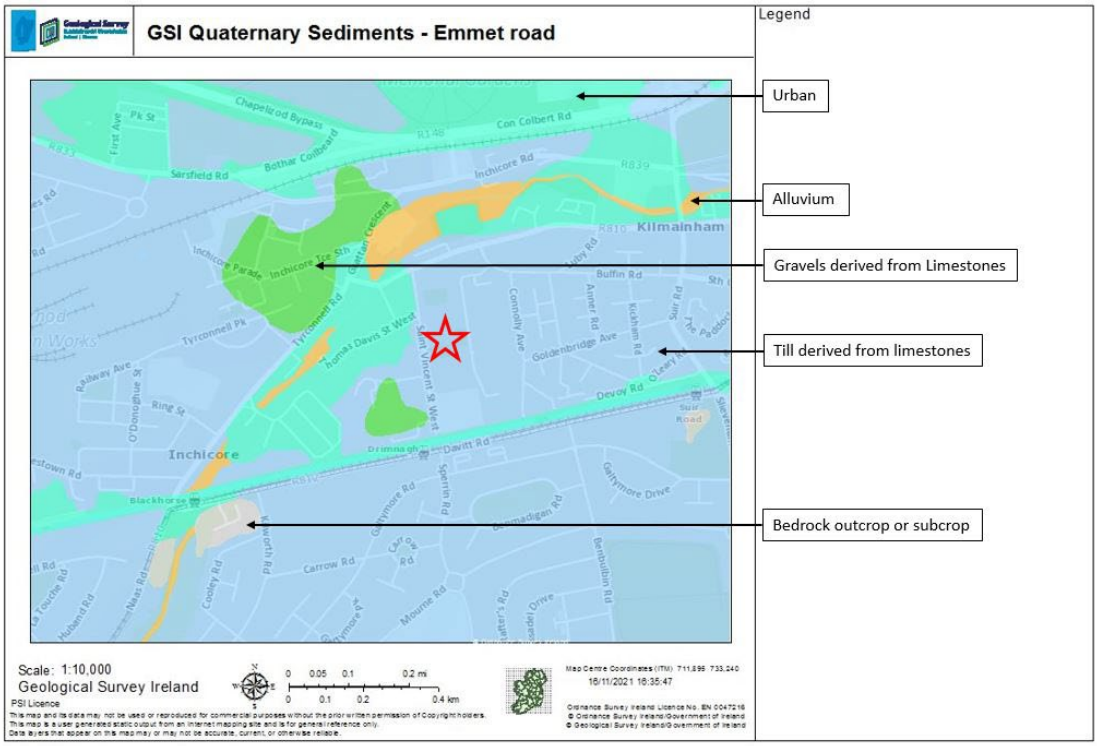

Figure 2.11 Quaternary Sediments (approximate site location indicated by red star) (Source: GSI, 2021)

2.5.5 Geology

The bedrock beneath the site area consists of the Carboniferous Lucan Formation, a dark limestone and shale. "The formation comprises dark-grey to black, fine-grained, occasionally cherty, micritic limestones that weather paler, usually to pale grey. There are rare dark coarser grained calcarenitic limestones, sometimes graded, and interbedded dark-grey calcar" (GSI). The local geology mapped by the GSI is illustrated on Figure 2.12.

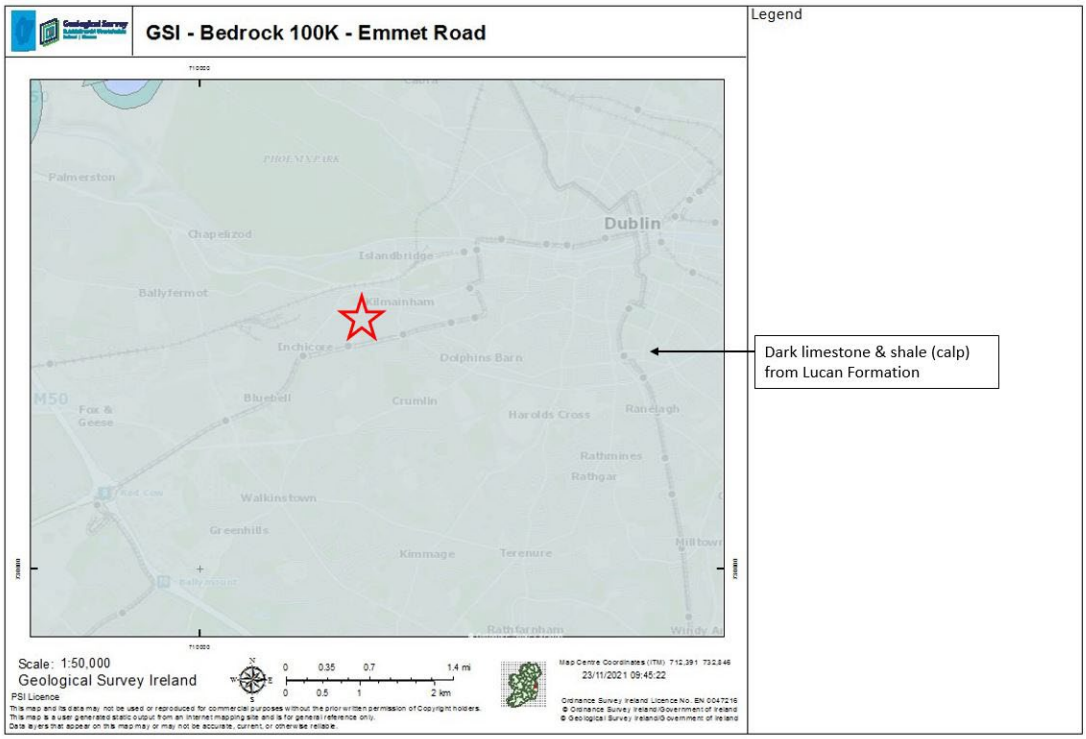

Figure 2.12. Bedrock 100K (Approximate site location indicated by the red star) (Source: GSI, 2020)

2.5.6 Aquifers

The GSI provides a methodology for aquifer classification based on resource value (Regionally Important, Locally Important, and Poor) and vulnerability (Extreme, High, Moderate, or Low). Resource value refers to the scale and production potential of the aquifer whilst vulnerability refers to the ease with which groundwater may be contaminated by human activities (vulnerability classification primarily based on the permeability and thickness of subsoils).

The site is underlain by a LI - locally important aquifer which spans out/covers an area of 1,309 km^2. The bedrock aquifer is classified as moderately productive only in local zones (refer to Figure 2.13) and is part of the Dublin Ground Water Body (GWB) which is described as poorly productive. The GWB covers an area of 837km^2 of Dublin and Kildare. The GSI Summary Characteristics of the Dublin GWB indicate that the transmissivity of these rock units is likely to be low (1-10m^2/d).

Most flow in this aquifer will occur near the surface in fractures. In general, the effective thickness of this aquifer is likely to be about 10 m, comprising a weathered zone of a few metres and a connected fractured zone below this. However, deep water strikes are commonly found in more isolated faults/ fractures at depths of 30 – 50 mbGL. Flow path lengths are not considered to be on a regional scale and are typically less than 1km in length.

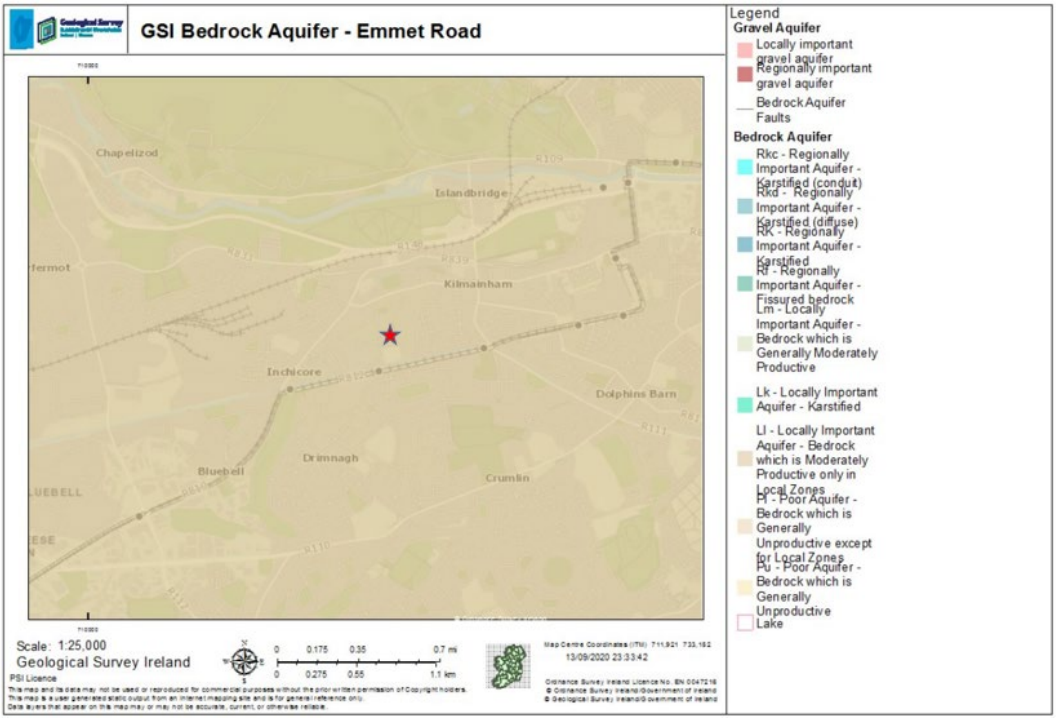

Figure 2.13 Aquifers (Approximate site location indicated by the red star) (Source: GSI, 2020)

2.5.7 Aquifer Vulnerability

The groundwater vulnerability beneath the site is ***High*** with localized ***Extreme*** zones 0.6 km southeast and southwest of the site (refer to Figure 2.14). Vulnerability ratings are a function of overburden thickness and permeability which might offer a degree of protection and/or attenuation to the underlying aquifer from surface activities and pollution.

There were no karst features identified adjacent to the site.

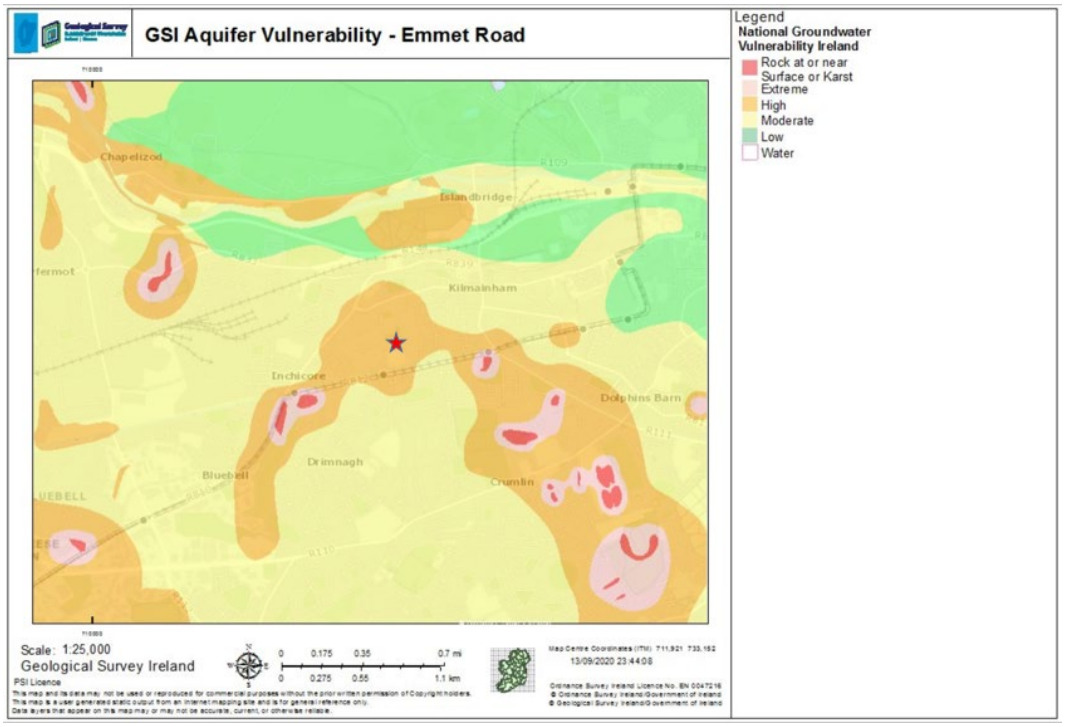

Figure 2.14 Groundwater Vulnerability (Approximate site location indicated by the red star) (Source: GSI, 2020)

2.5.8 Groundwater Status

An assessment carried out under the Water Framework Directive (WFD) 2013-2018 groundwater body (EPA, 2021) has concluded that the groundwater within the bedrock aquifer is presently of 'Good Status'. Accordingly, the objective is to protect the "Good Status" by recognizing that the quality of groundwater is at risk due to point and diffuse sources of pollution. Refer to Figure 2.15.

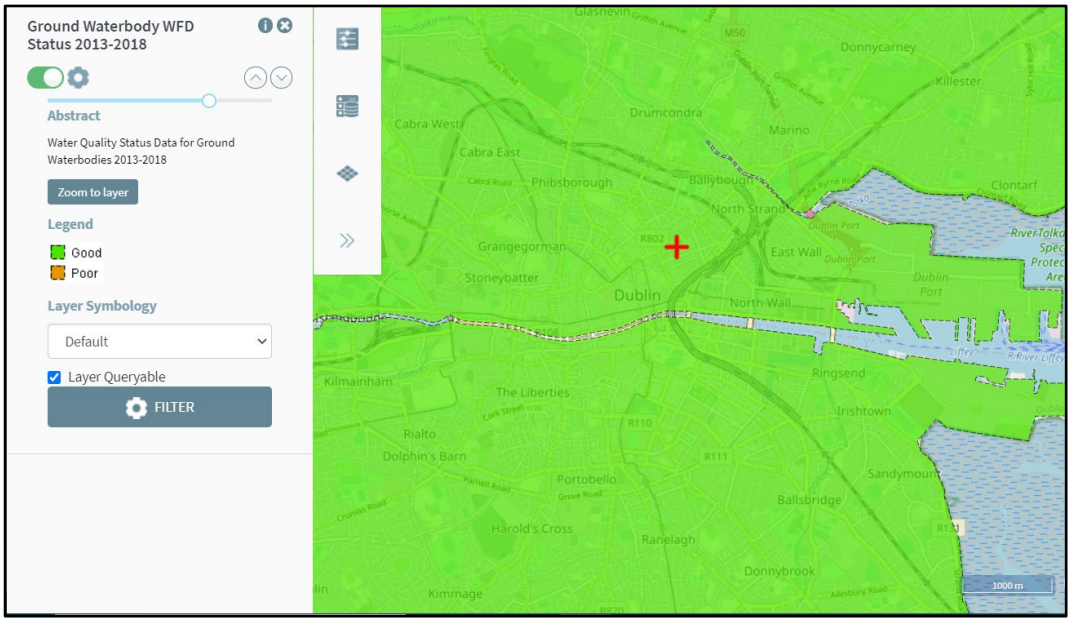

Figure 2.15 WFD Status 2013-2018 (Approximate site location indicated by the red cross star) (Source: EPA maps, 2021)

According to the Water Framework Directive Classification Scheme, the risk of the groundwater body not meeting its WFD objectives by 2027 is 'At Review' (see Figure 2.16).

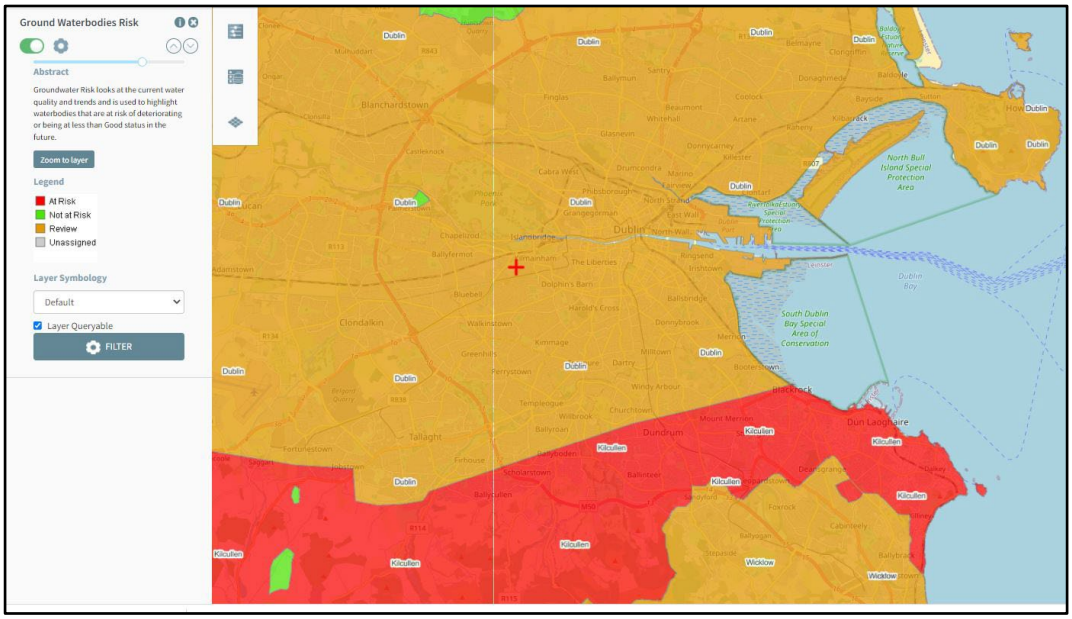

Figure 2.16 WFD Risk Status (Approximate site location indicated by the red cross) (Source: EPA maps, 2021)

2.5.9 Groundwater Recharge

Diffuse recharge generally occurs via rainfall percolating through the subsoil and reaching the aquifer. Recharge is higher in areas where the subsoil is thinner and/or more permeable. The proportion of the effective rainfall that recharges the aquifer

is largely determined by the thickness and permeability of the soil and subsoil, and by the slope.

The GSI's groundwater recharge model parameters for the site are summarised in Table 2.2. Figure 2.17 depicts the GSI groundwater recharge zones for the site area. These estimates of recharge do not account for leakage to ground from water supply, storm drains, and sewers.

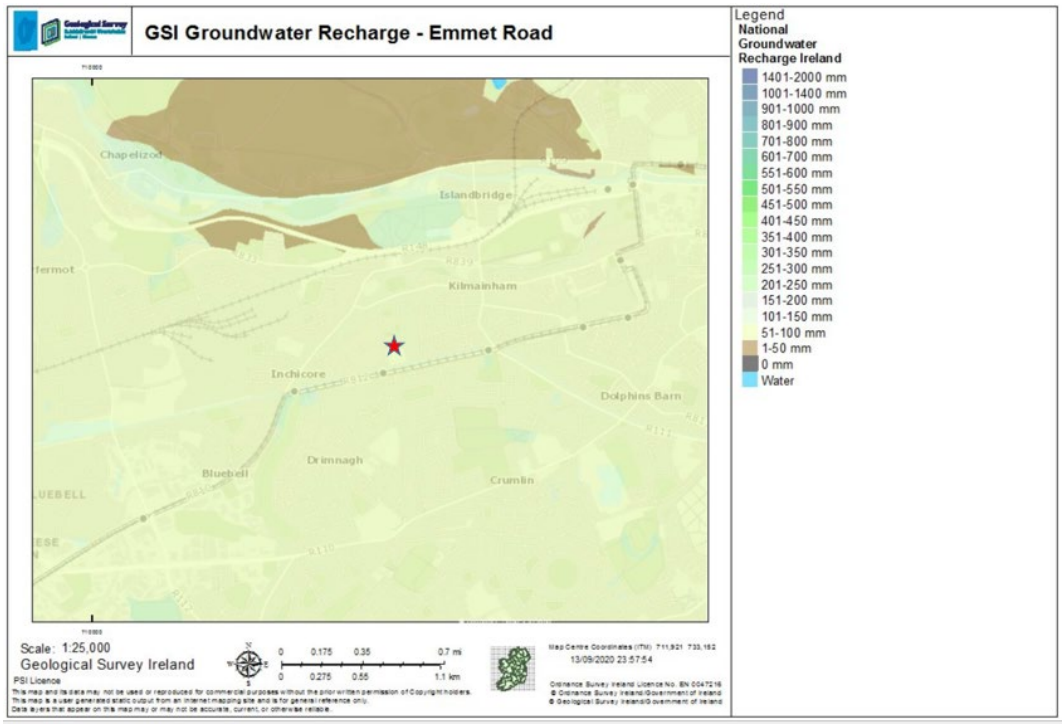

Figure 2.17 Groundwater Recharge (Approximate site location indicated by the red star) (Source: GSI, 2020)

Table 2.2 GSI Groundwater Recharge Parameters

Groundwater Recharge Parameters	
Average Recharge (mm/yr):	70
Hydrogeological Setting Description:	Made ground
Soil Drainage:	MADE
Subsoil Type:	Made
Subsoil Description:	Made ground
Subsoil Permeability:	L
Subsoil Permeability Description:	Low
GW Vulnerability:	H
GW Vulnerability Description:	High
Aquifer Category:	LI
Aquifer Category Description:	Locally important aquifer- Bedrock which is moderately productive only in local zones
Recharge Coefficient (%):	20
Maximum Recharge Capacity (mm/yr):	200
Effective Rainfall (mm/yr):	350

2.5.10 Wells & Springs

A search of the GSI groundwater well database was conducted to identify registered wells in the surrounding area. The well in closest proximity to the site is located approximately 1.3 km to the south/southeast of the site in Drimnagh, Dublin 12. It was drilled on January 4th 1996 to a depth of 3.3 m for an unspecified purpose. The second nearest is a borehole drilled on August 1th 1949 to 41.1 meters for industrial use.

The GSI (1999) also provides a framework for the protection of groundwater source zones (e.g. areas of contribution to water supply bores). There are no reported source protection zones (SPZs) within a 20km radius of the site.

Mapped wells and springs in the general vicinity of the site identified by the GSI are illustrated on Figure 2.18.

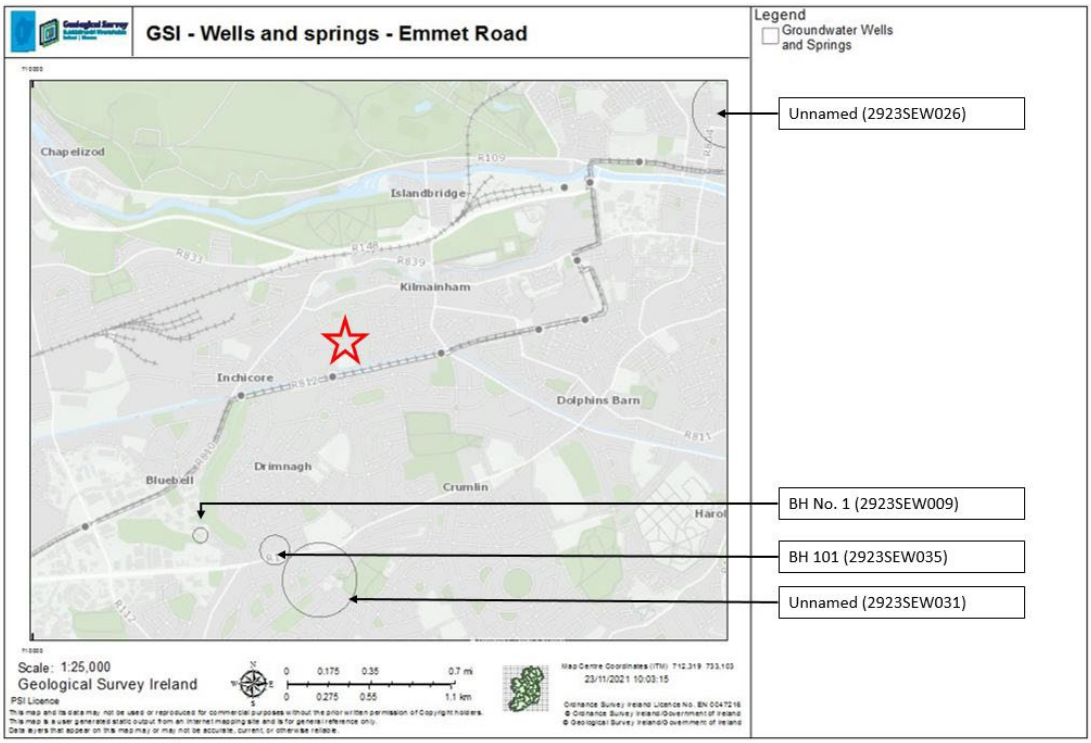

Figure 2.18 Wells and springs (Approximate site location indicated by the red star) (Source: GSI, 2021)

2.5.11 Hydrology

The Grand Canal, at its closest point, is located approximately 0.11 km south of the site and flows in an easterly direction. The WFD status of the Grand Canal has been designated as 'Good'. The Camac River is located approximately 0.07 km northwest of the site and has been designated as having a 'Poor' WFD status. The River Liffey is approximately 0.65 km north of the site and has been identified as having a 'Moderate' WFD status. Refer to Figure 2.19.

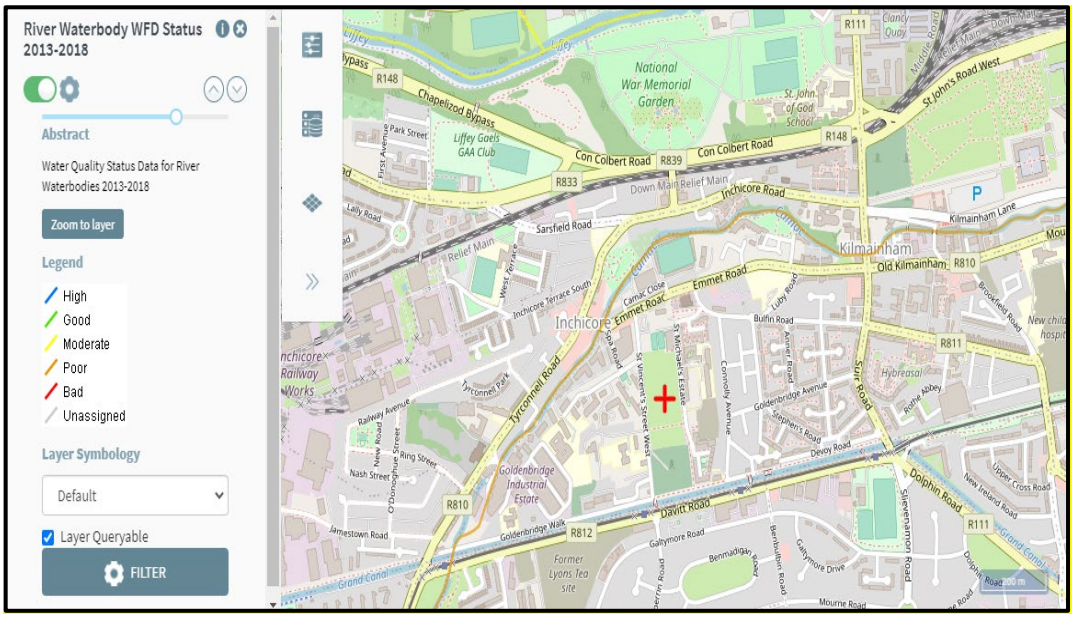

Figure 2.19 River Waterbody Status 2013- 2018 (Approximate site location indicated by the red star) (Source: EPA, 2020)

The Grand Canal has been designated as 'Not at Risk' of meeting its WFD objectives by 2027. Conversely, the Camac River and River Liffey are both identified as 'At Risk' of not meeting their WFD objectives by 2027. Refer to Figure 2.20.

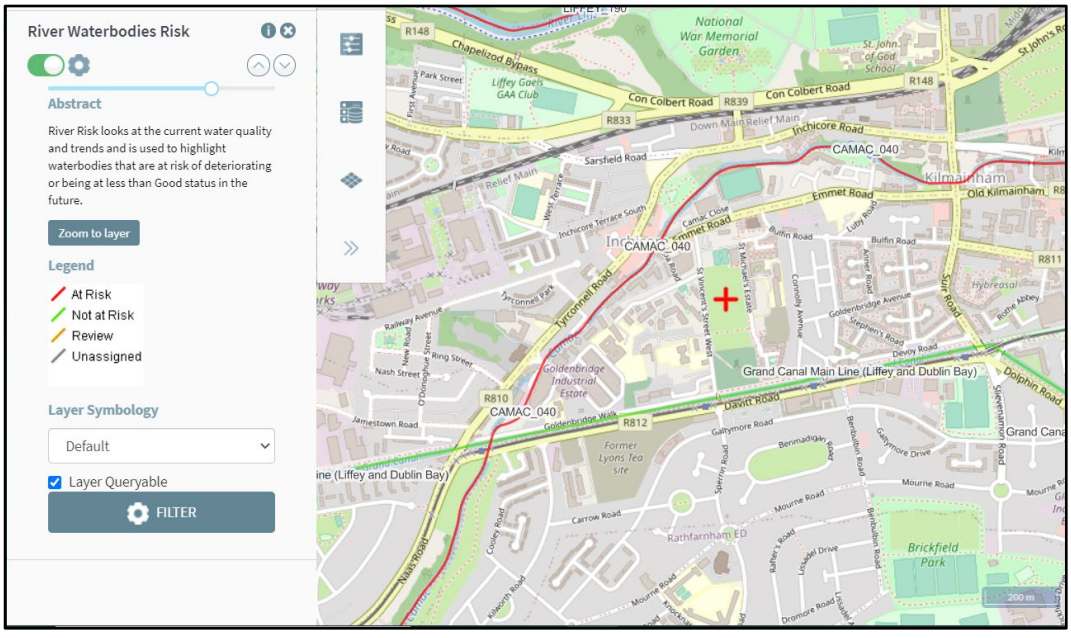

Figure 2.20 WFD Risk score 2013- 2018 (Approximate site location indicated by the red star) (Source: EPA, 2020)

2.5.12 Radon

According to the EPA (now incorporating the Radiological Protection Institute of Ireland) about 1 in 20 homes in this area is likely to have high radon levels. This is considered a low ranking score. Refer to Figure 2.21.

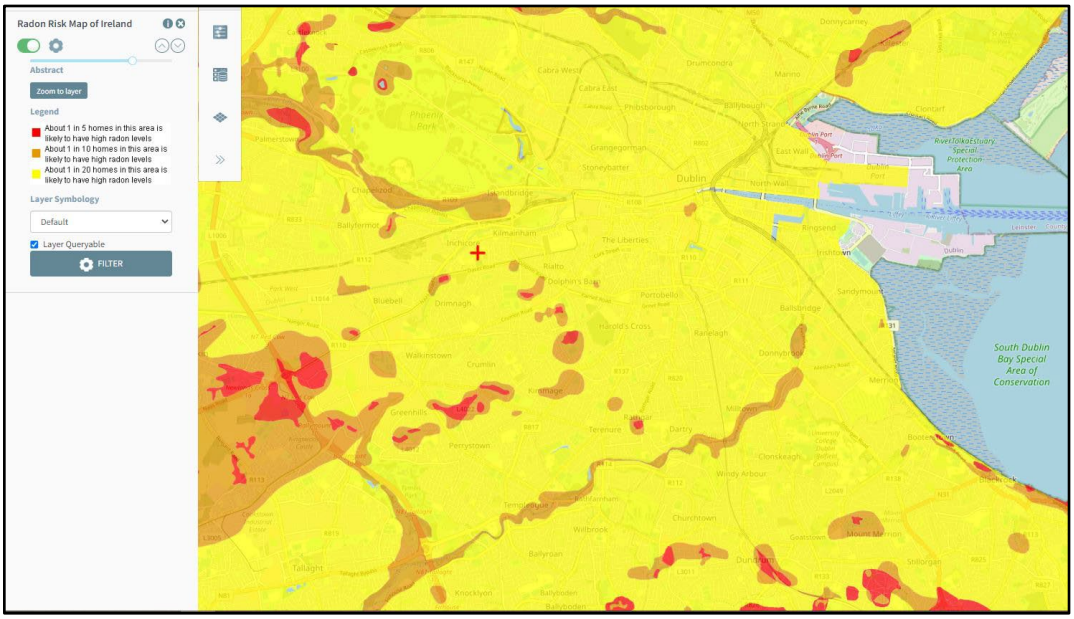

Figure 2.21 Radon Map (Approximate site location indicated by the red cross) (Source: EPA, 2021)

2.5.13 Designated Areas of Conservation

The nearest Proposed Natural Heritage Area (pNHA) is the Grand Canal (Site Code 002104) main line located approximately 0.1km south of the site (refer to Figure 2.22). The second nearest pNHA is River Liffey Valley (Site Code 000128), located 2.7km northwest of the site at its closest point.

The nearest Special Protected Area (SPA) is the South Dublin Bay and River Tolka Estuary SPA (Site Code 004024), located approximately 6.9km east of the site (refer to Figure 2.22). The second nearest pNHA is North Bull Island SPA (Site Code 004006), located 9.1km northeast of the site at its closest point.

The nearest Special Area of Conservation (SAC) is South Dublin Bay (Site Code 000210), located approximately 6.9km east of the site (refer to Figure 2.22). The second nearest SAC is North Dublin Bay SAC (Site Code 000206), located 9.3km northeast of the site at its closest point.

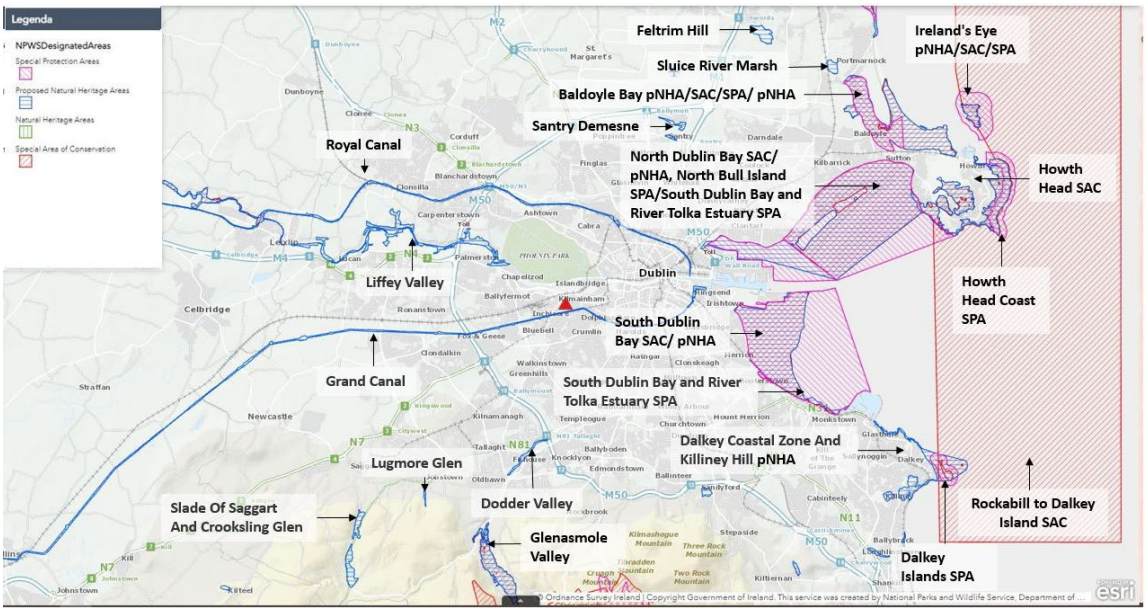

Figure 2.22 NPWS Designated Area (approximate site perimeter location indicated by red line)

2.5.14 Summary of the Physical Site Setting

Summary of the site physical setting are outlined in Table 2.3.

Table 2.3 Summary Site Setting

FEATURE	DETAILS & COMMENTS
Topography	Relatively flat site at elevation in an urban setting.
Geology	**Topsoil and Subsoil:** Made ground and 'Urban'.
	Solid Geology: According to GSI data, the bedrock geology beneath the site is underlain by Carboniferous Lucan Formation comprising dark limestones and shales
Hydrogeology	**Aquifer Classification:** ***Ll -*** Locally Important which is moderately productive only in for local zones
	Vulnerability & Recharge: The vulnerability has been classified as ***High***. The maximum recharge capacity has been modelled at 200 mm/year.
	Groundwater Flow:

	The regional bedrock groundwater flow direction is from the southwest to the north and east of the site.
	Well Search: There were no Source Protection Zones identified on or near the site. Therefore, the assumption is that there are no public supply wells within a 20km zone. The nearest registered borehole is located approximately 1.4 km south-southeast of the site in Drimnagh. It was drilled on January 4th, 1996, to a depth of 3.3m for an unspecified purpose. The second nearest is a borehole drilled on August 1st 1949 to 41.1 meters for industrial use.
Hydrology	**Surface Water Courses:** There are no surface watercourses on the site. The Grand Canal main line, the River Camac, and the River Liffey are 110m, 70m and 650m, respectively from the site. The WFD status is 'Good' for Grand Canal, 'Poor' for Camac, and 'Moderate' for the Liffey. Grand Canal was designated 'Not at Risk' and the River Liffey and River Camac are designated 'At Risk' of meeting their 2027 WFD objectives.
Designated sites	The nearest Proposed Natural Heritage Areas (pNHA) are the Grand Canal (Site Code 002104) main line and River Liffey Valley (Site Code 000128), located approximately 0.1km south and 2.7km northwest, respectively. The nearest Special Protected Area (SPA) are the South Dublin Bay and River Tolka Estuary SPA (Site Code 004024), and pNHA is North Bull Island SPA (Site Code 004006) located 6.9 east and 9.1km northeast, respectively. The nearest Special Area of Conservation (SAC) is the South Dublin Bay (Site Code 000210) and North Dublin Bay SAC (Site Code 000206), located 6.9km east and 9.3km northeast, respectively.

2.6. Site Walkover

OCSC undertook a site walkover survey at the site in October 2020. Photographs taken during the site investigation are included in Appendix C. The main observations of the survey are summarised below.

2.6.1 Infrastructure

Four buildings were on-site, including the Celtic Pigeon Club which has since been demolished, Inchicore Community Sports Center which does not form part of the planning application, and the EVE Tusicint Health Building and the St. Michaels

Parish Community Center which are part of a separate Part 8 planning application. The former halting site located directly east of the Pigeon Club, was not accessible, was bounded by stone walls and inside contained large boulders, shrubs, trees and fly-tipped waste.

2.6.2 Waste

The site is littered with general waste and domestic waste with evidence of fly tipping. In addition, evidence of waste burning was noted on the site during the ground investigation works.

2.6.3 Surface Waterbodies

No surface waterbodies are located on the site. The River Camac is the closest surface waterbody and is located 0.07km northwest of the site. The Grand Canal is located 0.11km south of the site.

2.6.4 Monitoring Infrastructure

No monitoring infrastructure was observed during the site walkover.

2.6.5 Asbestos

No asbestos was observed during the site walkover. However, waste was observed across the site during the ground investigation mainly domestic household waste. There is a low potential for Potentially Containing Asbestos Material (pACM) to be located within the fly-tipped waste.

3 PRELIMINARY CONCEPTUAL SITE MODEL

3.1 Risk Assessment Methodology

Currently there is no specific legislation addressing contaminated land in Ireland and therefore this report has been prepared considering the most relevant guidance published by the Irish Environmental Protection Agency (EPA) and the UK Environment Agency (EA) guidance as referenced in Section 1.6. Both authorities advocate a risk-based assessment when dealing with contaminated land and groundwater issues and this is considered best practice as well as being a requirement under the Environmental Liability Regulations (S.I. 547 of 2008).

A critical element of the risk assessment process is the establishment of a Conceptual Site Model (CSM) for the site. A CSM describes the potential sources of contamination at a site, the migration pathways it may follow and the receptors it could impact. If a complete source-pathway-receptor scenario exists, then there is a potential pollutant linkage that needs to be characterised and assessed (via formal risk assessment). All three elements need to be present for a viable risk to exist (e.g. if a source and receptor exist but no pathway is present then there is no pollutant linkage and hence no risk). The CSM is updated and refined as more information is gathered from subsequent desk studies and site investigations.

3.2 Contamination Sources

Following the Phase I review the areas of concern which are considered as potential pollutant sources are summarised in Table 3.1:

Table 3.1 Potential Areas of Concern

AREA/ ASPECT	DETAILS & COMMENTS	SIZE/ MAGNITUDE	POTENTIAL FUTURE RISK
Made Ground/ Urban	Any contaminants within the material used to fill the site.	Medium	Medium
Previous/ existing site use – construction and demolition waste, storage tanks, military buildings, former residential units	Any contaminants within the material associated with the past/current site use, former military operations, fly tipped waste, former fuel storage tanks, construction and demolition works, former use as a halting site, and pACMs.	Medium	Medium

AREA/ ASPECT	DETAILS & COMMENTS	SIZE/ MAGNITUDE	POTENTIAL FUTURE RISK
Surrounding land	Contaminants migrating into the site via groundwater.	Low	Low to Medium

3.3 Outline Conceptual Site Model

Based on the Environmental Site Assessment, several possible pollution linkages were identified for the site (Refer Table 3.2).

Table 3.2 Preliminary Conceptual Site Model

SOURCE	PATHWAY	RECEPTOR	POTENTIAL POLLUTANT LINKAGE Y/N	RISK
Environmental				
Migration of contamination from onsite and adjacent properties.	Perched groundwater flow into and through the site	Groundwater in the bedrock aquifer	Y	Moderate Potential Risk following desk study
Potential contamination from unknown source of material	Leaching contaminants from made ground	Perched Groundwater	Y	Low Potential Risk following desk study
	Perched groundwater leaching and transporting contaminants from made ground	Groundwater in the bedrock aquifer	Y	Low Potential Risk following desk study
Potential contamination from unknown source of material, from former military operations, former fuel storage tanks, fly-tipped waste,	Surface deposition	Soils (leaching)	Y	Potential Risk

SOURCE	PATHWAY	RECEPTOR	POTENTIAL POLLUTANT LINKAGE Y/N	RISK
construction and demolition waste				
Human Health				
Potential contamination from a) Imported made ground b) Past site usage including construction/demolition works, fly-tipped waste, former military operations, former fuel storage tanks	Vapour migration to indoor and outdoor air	Commercial users onsite and residential offsite	Y	Potential Risk
Migration of contamination from adjacent properties, historic Chassis Works, historic Omnibus Works, historic Tramway and Depots	Inhalation/ dermal contact/ ingestion of soils/ dusts	Commercial users onsite and residential offsite	Y	Low Potential Risk following desk study
Potential contamination from a) Imported made ground b) Past site usage including construction/demolition works, fly-tipped waste, former military operations, former fuel storage tanks			Y	Potential Risk
Potential contamination within groundwater	Migration of contaminants in the bedrock aquifer	Groundwater users	Y	Low Risk

Table 3.2 (Continued) Preliminary Conceptual Site Model

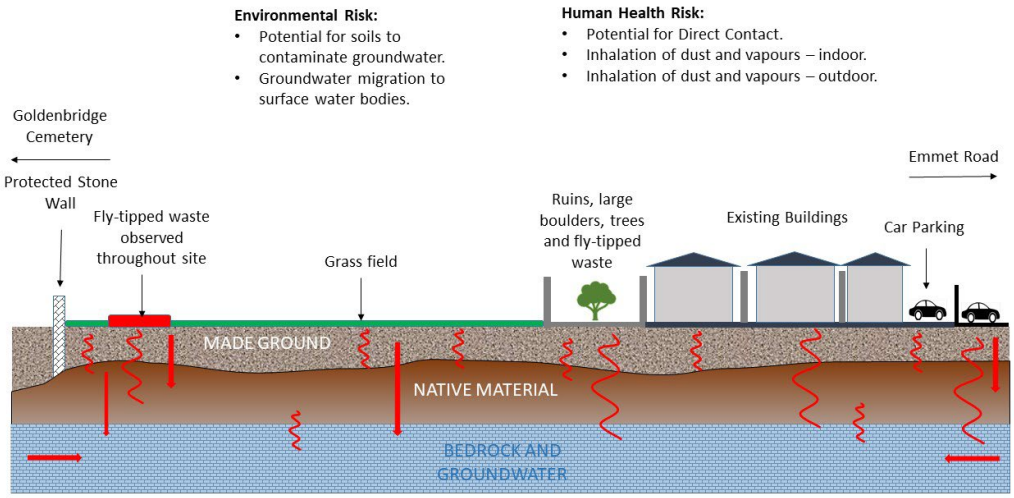

Figure 3.1 Preliminary Conceptual Site Model

Note: Generic risk assessments do not assess risks to construction workers who are managed under the Safety and Welfare at Work Regulations.

4 SITE INVESTIGATION – METHODOLOGY

Window sampling works were undertaken from 16th September to 1st October 2020. Trail pitting works were undertaken from 9th to 13th October 2020. Geobore works were undertaken from 7th to 14th October 2020. The GII Ground Investigation report is included in Appendix D. Site investigation and monitoring locations are illustrated and included in Appendix E.

Site investigation completed included the following:

- 51No. window sampling locations
- 14No. Trial Pit locations
- 6No. GeoBore locations
- 221No. soil samples collected and analysed (224No. samples for asbestos analysis)
- Gas Monitoring of 10No. standpipe locations
- 3No. groundwater samples collected and analysed

4.1 Soil Sampling & Analysis

Best practice environmental sampling techniques were adopted to minimize the risk of cross contamination between sampling locations. OCSC's field scientists wore single-use disposable nitrile gloves, which were changed following the collection of each sample. Eight (8No.) samples were collected from GII's boreholes by GII personal using best practice environmental sampling techniques. Samples selected for analyses were placed into laboratory supplied sample jars.

Samples were stored in a chilled cool box and dispatched to Element Materials Technology in Deeside, UK accompanied with an appropriate chain of custody form and scheduled for analysis. Additional soil samples were stored in a laboratory provided container and dispatched to IOM laboratory in Edinburgh, Scotland accompanied with an appropriate COC from and scheduled for specialist asbestos analysis.

4.2 Laboratory Analysis – Soil

A total of two-hundred-and-twenty-one (221No.) soil samples had been collected and were submitted to Element a UKAS accredited laboratory, for a suite of analysis. The suite of analysis includes:

- Heavy metals (antimony, arsenic, barium, cadmium, chromium, copper, lead, mercury, molybdenum, nickel, selenium, zinc, hexavalent chromium and chromium III);
- Polycyclic Aromatic Hydrocarbons (PAHs);
- Total Petroleum Hydrocarbons Criteria Working Group (TPH CWG);
- Benzene, Toluene, Ethylbenzene, Xylenes (BTEX) and Methyl-Tert-Butyl-Ether (MTBE);

- Mineral Oil;
- Speciated Polychlorinated Biphenyl (PCBs);
- Total Organic Carbon, dissolved organic carbon;
- Fluoride, chloride, sulphate, phenol;
- Volatile Organic Compounds (VOC) in selected samples; and
- Leachability (metals – as above);

A total of two-hundred-and-twenty-four (224 No.) soil samples were sent to IOM Laboratories (Edinburgh, Scotland) for quantitative and qualitative asbestos soil testing.

4.3 Groundwater Sampling

A groundwater sampling event was conducted on 8th January 2021. Prior to sampling, all monitoring wells were dipped with an interface probe to monitor the depth to water level in the standpipe and also to investigate the presence or absence of light non-aqueous phase liquids (LNAPLs) or dense non-aqueous phase liquids (DNAPLs). The monitoring wells were then developed prior to sample collection by removing a large volume of water and fines from the boreholes to ensure continuity with surrounding waterbody/aquifer.

Groundwater samples were taken using a bailer. OCSC's field scientists wore single-use disposable nitrile gloves and single-use tubing, which were changed following the collection of each sample. Samples selected for analyses were placed into laboratory supplied sample jars. Samples were stored in a chilled cool box and dispatched to Element Materials Technology laboratory in Deeside, UK accompanied with an appropriate chain of custody form and scheduled for analysis.

4.4 Laboratory Analysis - Water

A total of three (3No.) ground water samples were collected and submitted to Element a UKAS accredited laboratory for a suite of analyses including:

- Heavy metals (arsenic, boron, cadmium, calcium, chromium, copper, lead, mercury, magnesium, potassium, nickel, selenium, sodium, and zinc);
- Sulphate as SO_4, Chloride, and Ammoniacal Nitrogen as NH_3;
- Total Petroleum Hydrocarbon (TPH) Criteria Working Group (CWG);
- Semi-VOCs (sVOCs) for selected locations;
- Benzene, Toluene, Ethylbenzene, Xylenes (BTEX), and Methyl-Tert-Butyl-Ether (MTBE);
- Mineral Oil;
- Polycyclic Aromatic Hydrocarbons (PAHs);
- Gasoline Range Organics (GRO); and

- Extractable Petroleum Hydrocarbons (EPH).

Laboratory Certificates are available in Appendix B.

4.5 Groundwater Level Monitoring

Groundwater level monitoring was performed from November to December 2020 and is described in Section 5.2.

4.6 Gas Monitoring

Gas Monitoring was undertaken in accordance with best practice guidelines. Samples were collected from 10No. boreholes on 7No. occasions using a GA5000 Geotech landfill gas meter equipped with flow measuring capabilities. The following parameters were measured:

- Methane (CH_4) %
- Lower Explosive Limit (%)
- Carbon dioxide (CO_2) %
- Carbon monoxide (CO) parts per million (ppm)
- Hydrogen sulphide (H_2S) ppm
- Oxygen %
- Balance of Gases %
- Flow l/hr
- Barometric pressure

4.7 Quality Assurance & Quality Control Procedures

Comprehensive Quality Assurance and Quality Control (QA/QC) procedures were implemented at all stages of the works to assess the accuracy of the data set collected and enable provision of data that is considered acceptable. In addition to adherence of sampling protocols, internal QA/QC checks by the laboratory are completed.

5 SITE INVESTIGATION – FINDINGS

5.1 Conditions Encountered

The sequence of strata encountered was recorded from OCSC's window sampling field observations, GII window sampling log, GII's trial pit log, and GII's borehole log (GII Report in Appendix D) and is summarised in Table 5.1:

Table 5.1 Measured Thickness – Conditions Encountered (m)

Measured thickness Range (m)	Strata	Description
0 to 3.2	Made Ground	MADE GROUND depths varied throughout the site, and some surface layers consisted of tarmac or concrete, while others consisted of grass topsoil at the surface layer. Brown silty sandy gravelly fill CLAY with fragments of mortar, concrete, plastic, timber, glass, and bricks. Multiple brick building structures were observed at varying depths.
1.1 to 12.6	Native Material	Brown-dark brown firm sandy gravelly CLAY. Dark grey sandy gravelly CLAY with cobbles and boulders.
3.05 to 14.5	Bedrock	Bedrock was encountered at varying depths from 3.05mbgl to 12.6mbgl. Strong thinly laminated grey fined argillaceous LIMESTONE with occasional calcite veins interbedded with weak to medium strong thinly laminated black fine grained calcareous MUDSTONE with pyrite lamination.

5.2 Conditions Encountered – Groundwater Field Observations

Water levels were recorded from 9th November 2020 to 16th December 2020 at ten locations on site and are listed in Table 5.2.

Table 5.2 Water Levels

	BH02	WS07	WS15	BH07	BH08	WS34	WS43	WS44	BH12	WS50

5.3 Conditions Encountered - Gas

Gas monitoring was undertaken on 7No. occasions from November 2020 to December 2020 by an OCSC Environmental Consultant. See Section 6.5 for full details regarding the gas assessment.

6 GENERIC QUANTITATIVE RISK ASSESSMENT

6.1 Generic Assessment Criteria

A risk-based approach has been adopted for the assessment of data obtained during the site investigations as per the CLEA methodology (CLR 7). The risk scenario identified is Residential without Plant Uptake, Commercial and Public Open Space (POS) (Resi), Laboratory analytical results for soil samples were compared to the Generic Assessment Criteria (GAC) for 'Residential', 'Commercial' and 'POS (Resi)'.

Constituent concentrations in the site soils were deemed 'potentially significant' where they exceeded the generic values. These generic values are used for initial assessment of contaminant concentrations for the purpose of providing an initial indication of impacts at a site. Comparison with GACs is a means of evaluating the compounds that may require a more detailed assessment. It should be noted that generic exceedances are not an indication of the requirement for remediation and instead are indicative of the need for further assessment or Detailed Quantitative Risk Assessment (DQRA).

Additionally, where further risk assessment is considered necessary, use of more site-specific information in the assessment can often lead to the conclusion that the observed concentrations are present at levels which represent an acceptable level of risk, considering the actual or proposed end use of a site (although each site assessment has to be considered on an individual basis).

The risk to construction workers is not considered under the CLEA methodology. It is assumed that health and safety guidelines will be adhered to and appropriate health and safety planning/assessments shall be undertaken in advance of any on-site works.

6.1.1 Soil Screening Criteria

The soil analytical data was compared with a set of standard GAC 'Residential', 'Commercial' and 'POS (Resi)' criteria. The sources of the generic screening criteria included the following published information:

- The LQM/CIEH S4ULs for Human Health Risk Assessment (2015);
- SP1010 – Development of Category 4 Screening Levels for Assessment of Land Affected by Contamination CL:AIRE (2014);
- EIC/AGS/CL:AIRE Soil Generic Assessment Criteria for Human Health Risk Assessment (2010);

In general, GACs are conservative screening criteria protective of human health. If the concentrations are below the GAC, then the risks to human health are considered negligible. If the concentrations are above the GAC, a potential risk to human health is identified and further assessment is required. The GACs are consistent with the principles of human health protection in Irish EPA, UK DEFRA, and UK Environment Agency guidance.

The active exposure pathways considered under the 'Residential', 'Commercial' and 'POS (Resi)' scenarios are:

- Ingestion of soil and dust;
- Dermal contact with soils and dust;

- Inhalation of dusts; and
- Inhalation of vapours (indoor and outdoor air).

Soil Organic Matter (SOM) was calculated to determine the most appropriate GAC values for the samples to be analysed against. The overall average of SOM in the 221No. samples is 1.44%, so 1% GAC was applied to all samples.

6.1.2 Groundwater Screening Criteria

Groundwater samples results were compared to the Society of Brownfield Risk Assessment (SoBRA) GAC for Assessing Vapour Risks to Human Health from Volatile Contaminants in Groundwater 2017. To determine environmental risk, the groundwater sample results were compared to the European Union Environmental Objectives (Groundwater) (Amendment) Regulations 2016 - SI No 366 of 2016, Environmental Protection Agency Interim Guideline Values for the Protection of Groundwater in Ireland – 2003, European Union Environmental Objectives (Surface Waters) (Amendment) Regulations 2015 S.I. No. 386 of 2015.

It is noted that the comparison of groundwater analytical results with the relevant Environmental Regulation guideline values does not determine the level of actual risk but is used as a guide to the potential risks posed. Contaminant concentrations below the GACs are considered to warrant no further risk assessment. However, concentrations above the environmental generic screening criteria may require further consideration through either qualitative or quantitative assessment. Groundwater samples results is documented in Section 6.3.

The Society of Brownfield Risk Assessment – Development of Generic Assessment Criteria for Assessing Vapour Risks to Human Health from Volatile Contaminants in Groundwater February 2017 were used to assess potential risks from volatile compounds in on-site groundwater. Further evaluation of any identified contaminants of concern (COC) were conducted in a site-specific Detailed Quantitative Risk Assessment (DQRA) to determine if the concentrations pose an unacceptable significant risk to receptors. Supplementary information on Henry's Law for additional compounds is available in the LQM/CIEH S4ULs for Human Health Risk Assessment (2015).

6.1.3 Ground Gas (Permanent Gases) Screening Criteria

A semi-quantitative assessment of ground gas concentrations was undertaken as set out in BS8485: 2015 Code of practice for the design of protective measures for methane and carbon dioxide ground gases for new buildings. Information was also taken from CIRIA C665 (2007) Assessing risks posed by hazardous ground gases to buildings, Wilson, S. et al. Gas screening criteria and assessment is documented in Section 6.3.

6.2 Soil Assessment Results

The soil analytical results are presented in Table 1 and the laboratory Certificate of Results in Appendix F. Soil analytical results are imposed on sample location maps and are attached in Appendix E.

6.2.1 TPHs, BTEX and MTBE

The analytical results for TPHs were below the Commercial, POS (Resi) and Residential GACs in all of samples, with the exception of:

- TPH CWG Aliphatics in 9No. samples exceeded the Residential GACs.
  - C10-C12 in 9No. samples exceeded the Residential GAC, with values ranging from 153.8mg/kg in WS30 (1 to 2mbgl) to 588.7mg/kg in WS34 (0.8 to 1mbgl).
  - C12-C16 in 3No. samples exceeded the Residential GAC, with values ranging from 1,120mg/kg in WS34 (1.3 to 1.5mbgl) to 1,602mg/kg in WS34 (0.8 to 1mbgl).
- TPH CWG Aromatics in 1No. sample exceeded the Residential GACs.
  - EC10-EC12 in 1No. sample exceeded the Residential GAC, with a concentration of 300.8mg/kg in WS34 (0.8 to 1mbgl).

The analytical results for BTEX and MTBE were below the Residential, Commercial and POS (Resi) GACs in all of samples.

6.2.2 PAHs

The analytical results for PAHs were below the Commercial, POS (Resi) and Residential GACs in all of samples, with the exception of:

- Dibenzo(ah)anthracene in 1No. sample exceeded the Residential GAC, with a concentration of 0.34mg/kg in WS13 (0 to 1mbgl).

6.2.3 Metals

The analytical results for metals were below the Commercial, POS (Resi) and Residential GACs in all of samples, with the exception of:

- Arsenic in 7No. samples exceeded the Residential GAC and 2No. samples also exceeded their POS (Resi) GAC, with values ranging from 45.3mg/kg in WS49 (0 to 0.9) to 133.9mg/kg in WS37 (0 to 1mbgl).
- Lead in 2No. samples exceeded the Residential GAC, with values ranging from 319mg/kg in WS47 (0.8 to 1mbgl) to 402mg/kg in WS38 (0.8 to 1mbgl).

6.2.4 PCBs

None of the samples contained concentrations of PCBs in excess of the Commercial, POS (Resi) and Residential GACs. All of the samples reported concentrations below the laboratory MDL.

6.2.5 Phenol

None of the samples contained concentrations of phenol in excess of the Commercial, POS (Resi) and Residential GACs.

6.2.6 Asbestos

Samples from all soil sampling locations were submitted to IOM laboratories for asbestos identification and quantification. Results confirmed that all but two of the 224No. samples were negative for asbestos. The two samples containing quantifiable levels were from two hotspots with percentages of 0.003% and 0.176% chrysotile identified in TP19 (2-3mbGL) and WS13 (0-1mbGL), respectively.

6.3 Groundwater Assessment Results

The groundwater analytical results for the three (3No.) groundwater samples are presented in Table 2. The laboratory Certificate of Results is included in Appendix F.

6.3.1 Dissolved Metals

The analytical results for dissolved metals were below the Groundwater Regulations and EPA Interim Guideline Values in all of samples, with the exception of:

- Dissolved Arsenic in 1No. sample exceeded the Groundwater Regulations and EPA Interim Guideline Values with a concentration of 12.7 ug/l in WS34.

6.3.2 TPHs, MTBE and BTEX

The analytical results for TPHs, MTBE and BTEX were below the Groundwater Regulations and EPA Interim Guideline Values in all of samples.

6.3.3 PAHs

The analytical results for PAHs were below the Groundwater Regulations and EPA Interim Guideline Values in all samples, with the exception of:

- Benzo(a)pyrene in 1No. sample exceeded the Groundwater Regulations and EPA Interim Guideline Values, with a concentration 0.034 ug/l in WS43.
- Total 16 EPA PAHs in 2No. samples exceeded in the EPA Interim Guideline Values, with concentrations of 8.02 ug/l in WS34 and 0.424 ug/l in WS43.

6.3.4 PCBs

The analytical results for PCBs were below the Groundwater Regulations and EPA Interim Guideline Values in all samples.

6.4 Groundwater Vapour Assessment Results

The groundwater results were compared to the SoBRA GACs (2017) for commercial and residential use as a screening exercise to evaluate whether the concentrations on site present a potential risk to onsite and offsite human health. These results are presented in Table 3.

All analytical results for dissolved metals, TPHs, MTBE, BTEX, PAHs, and PCBs were below the SoBRA GACs (2017) for commercial and residential Guideline Values in all of samples, with the exception of:

- TPH in 1No. sample exceeded the SoBRA 2017 Residential Development GAC for TPH CWG Aliphatics >C11-C12 (sol), with a concentration of 248 ug/l in WS34.

6.5 Gas Assessment Results

6.5.1 Site history and ground conditions

The desk study information indicates that the site has been structurally occupied since at least 1837-1842 when the site was a part of Richmond Barracks. Former site activities include military operations at the site, further conversion of the Barracks to St. Michael's Estate residential housing, and the demolition of St. Michael's Estate.

Analysis of soil organic matter (SOM) content of 221No. samples gave an overall site average of 1.44%. The peak result of 22.22% is in the Made Ground at WS44 (0 to 1mbgl) and was among four samples (all associated with Made Ground) with SOM results above 5%. These elevated results were not representative of values across the site.

6.5.2 Conditions Encountered - Gas

Gas monitoring was undertaken on 7No. occasions from November 2020 to December 2020 by an OCSC Environmental Consultant during rising and falling barometric conditions. Gas was measured in 10No. boreholes on site. Refer to Table 3 for the results.

Methane was detected at BH08 during two events with 0.1% on 3rd December 2020 and 0.4% on 16th December 2020. Methane was also detected at WS34 during four events with the highest stable concentration of 0.5% on 17th November 2020. Methane was not detected in any other boreholes.

Carbon dioxide was detected in all wells monitored. The highest peak concentration was observed in WS44 at 3.9% (stable CO_2). Concentrations in this well fluctuated from 2.6 % to 3.9%. Carbon dioxide levels in other wells ranged from 0% to 3.4%, with WS43 having the next highest concentration of stable carbon dioxide. See Table 6.1 for maximum stable concentrations of carbon dioxide.

There did not appear to be any significant impact of falling and rising barometric pressure on concentrations observed. The highest barometric pressure was recorded on 19 November 2020 (1,029mb).

Hydrogen sulphide was not detected in any of the wells during any event.

Carbon monoxide was detected in three wells monitored. Readings in BH02 and WS34 were typically at the method detection limit of the meter and were in the region of 1-2ppm. The highest concentrations were observed in BH08 at 11ppm (max

stable CO observed). Carbon monoxide was only detected in this well on one other occasion with a stable concentration of 2ppm.

Flow readings ranged from 1.3l/hr in WS34 to 0.9l/hr in BH02.

Table 6.1: Ground Gas Response Zones and maximum stable concentrations.

Monitoring Location	Slotted Depths of Standpipe (mbgl)	Response Zone	Maximum Stable Carbon Dioxide (CO_2)
BH02	2.0 to 14.5	Sandy gravelly CLAY/ Clayey gravelly BOULDERS / MUDSTONE / Fine grained LIMESTONE	0.6%
WS07	1.0 to 3.5	Sandy gravelly CLAY	0.3%
WS15	1.0 to 3.6	Sandy gravelly CLAY	2.6%
BH07	2.0 to 10.4	Sandy gravelly CLAY/ Clayey gravelly BOULDERS / Fine grained LIMESTONE	1.4%
BH08	1.3 to 5.3	Sandy clayey GRAVEL	0.3%
WS34	1.0 to 3.5	Sandy gravelly CLAY	2.4%
WS43	1.0 to 2.5	Sandy gravelly CLAY	3.4%
WS44	1.0 to 3.5	Sandy gravelly CLAY	3.9%
BH12	2.0 to 7.0	Sandy gravelly CLAY/ Fine grained LIMESTONE and MUDSTONE	2.9%
WS50	1.0 to 2.0	Sandy gravelly CLAY	2.3%

6.5.3 Risk Assessment

Possible Sources

As can be seen from Table 6.1, the carbon dioxide concentrations varied across the site with changes in depth and strata. Most of the higher concentrations of CO2 were

in sandy gravelly CLAY, which contained made ground and native material and varied in thickness and composition across the site.

Made Ground – Based on the ground gas results, it is considered that the Made Ground on site presents a limited potential ground gas source given the low degradable content. WS43, WS44, and WS50 standpipes were installed in areas of made ground with no native material. All other standpipes were installed in made ground and native material.

Made ground typically contained brick, plastic, concrete, mortar, and metal fragments.

Native Material –Based on the ground gas results, it is considered that the native material presents a limited potential ground gas source given the low degradable content.

Receptors

The receptors that have been considered during this assessment are the onsite residential, commercial, and public open space (resi) receptors of the proposed development. There will be mixed-use multi-storey apartment units in addition to commercial, retail and community facilities with no basement. The apartment units, community centres, and retail facilities can be considered a Type B building.

A Type B building according to BS8485 is a '*private or commercial property with central building management control of any alterations to the building or its uses but limited or no central building management control of the maintenance of the building, including the gas protection measures. Multiple occupancy. Small to medium size rooms with passive ventilation of rooms and other internal spaces throughout ground floor and basement areas. May be conventional building or civil engineering construction. Examples include managed apartments, multiple occupancy offices, some retail premises and parts of some public buildings (such as schools, hospitals, leisure centres) and parts of hotels.'*

Pathways

Potential pathways include:

1. Services: Given that this is a new building, services will be cast into the slab and will be sealed to ensure they are waterproof. Therefore, gas migration will not be significant.
2. Vertical migration through the floor slab.
    a. Foundation slab – concrete floor slab with minimal penetrations.

The risk associated with the migration scenarios identified above have also been assessed following the CIRIA document C665 (Assessing risks posed by hazardous ground gases to buildings). The pathway, likelihood, consequence, and overall risk has been assessed in Table 6.2.

Table 6.2: Overall Risk

Pathway	Likelihood	Consequence	Overall Risk
1. Services	Unlikely	Severe	Low Risk
2. Vertical Migration	Unlikely	Severe	Low Risk

Based on the ground gas measurements of methane and carbon dioxide concentrations of less than 4%, the made ground and native material on site likely present a limited potential ground gas source given their low degradable content.

To assess the level of risk associated with the carbon dioxide concentrations recorded in site soils, a gas screening value (GSV) has been determined for the site using the highest concentration recorded. The GSV is given by:

GSV = borehole flow rate (l/hr) x gas concentration (%)

Note: the gas concentration is in the mathematical form.

The GSV for the Site is 0.0507l/hr. This corresponds to a Characteristic Situation 1 (CS1) which has a hazard potential of Very Low. The gas concentrations measured are in accordance with the additional factors that need to be considered including the fact that the methane concentrations are <1% and carbon dioxide concentrations are <5%.

6.5.4 Conclusions and Recommendations

Based on the available information, it is considered that the made ground and native material on site present a limited ground gas source given the low degradable content. Therefore, the risk posed to the future residential and commercial occupiers of the development by the detected concentrations of ground gas is considered low.

7 REFINED CONCEPTUAL SITE MODEL (CSM)

Based on the findings of the soil assessment i.e., the results of the GQRA, there is the potential for some material to present a risk to future residential receptors. The CSM can now be refined using site specific information and the potential risk to human health can be assessed taking into account the proposed redevelopment of the site as outlined in Section 1.3.

7.1 Source – Made Ground – from previous site use or original source.

The exceedances of the GAC for metals (arsenic and lead) for residential (without plant uptake) and for public open space (resi) were in made ground. TPH and PAH exceedances of the GAC for Residential were both in the made ground and native material.

A Generic Quantitative Risk Assessment identified that the risk from the material in terms of 'Residential', 'Commercial' and 'Public Open Space (Resi)' scenarios are acceptable with the following exclusions: 20No. of the 221No. samples contained concentrations in excess of their GACs.

- WS15, WS16, WS17, TP19, WS20, WS37 and WS49 had exceedances above their GACs for arsenic. WS38 and WS47 had exceedances above their GACs for lead.
- WS13 had an exceedance above its GACs for dibenzo(ah)anthracene. WS30, TP33, WS34, WS39, and TP40 had exceedances above their GACs for TPH CWG Aliphatics (C10-C12). WS34 and WS39 had exceedances above their GACs for TPH CWG Aliphatics (C12-C16) and WS34 had additional exceedance of TPH CWG Aromatics (EC10-EC12).

As part of the design, it will be possible to break the Source Pathway Receptor linkage using the proposed buildings and hardstanding. This is particularly relevant for arsenic, lead and dibenzo(ah)anthracene exceedances. However, TPH exceedances will require additional modelling, mitigation, or removal of the source material in order to successfully break the SPR linkage adjacent to WS30, TP33, WS34, and WS39. On the basis of the above, further assessment is required.

Outcome: Further assessment is required.

7.2 Source – Offsite/Onsite Sources – contamination at depth

As identified in the initial CSM, migration of contamination from adjacent property's historic chassis works, historic omnibus works, historic tramway and depots would not be considered a potential source of current contaminants based on age and the historic site use for military operations and residential construction and demolition activities.

The deepest identified contamination was found at TP40 at 3 to 3.2mbgl and consisted of TPH C10-C12. TPH exceedances will require additional modelling, mitigation, or removal of the source material in order to successfully break the SPR linkage adjacent at TP40.

Outcome: Further assessment required.

7.3 Source – Ground Gas

Ground gas assessment showed low levels of ground gases and a site characterisation of CS1 which has a hazard potential of Very Low.

Based on the above, additional evaluation and assessment is not required.

Outcome: No further assessment required.

7.4 Source – Groundwater

PAHs and arsenic exceeded the GAC values used to evaluate the groundwater results. Some of the exceedances are likely to reflect historical onsite sources such as an old tank located between WS34 and WS43.

The Polycyclic aromatic hydrocarbons (PAHs) are a class of chemicals that occur naturally in coal, crude oil, and gasoline. They also are produced when coal, oil, gas, wood, garbage, and tobacco are burned. Arsenic sources can occur naturally on soils and waterbodies or in a variety of industrial processes.

However, this contamination likely represents small scale groundwater contamination resulting from soil contamination associated with past site use. Contaminated soil removal will be undertaken as part of bulk excavation for site redevelopment which thereby reducing sources of potential contamination to groundwater. As such, long-term risk associated with impacted groundwater in the areas of WS34 and WS43 are not deemed significant.

Based on the above, additional evaluation and assessment is not required.

7.5 Source – Groundwater Vapour Risk

The risk from the material in terms of the Generic Assessment Criteria for Groundwater Vapours 'Residential' and 'Commercial' scenarios are acceptable with the exclusion of:

- TPH in 1No. sample exceeded the SoBRA 2017 Residential Development GACs, with a concentration of 248 ug/l in WS34.

However, this contamination likely represents small scale groundwater contamination resulting from soil contamination associated with past site use. Some contaminated soil removal will be undertaken as part of excavation for site redevelopment which thereby reducing sources of potential contamination to groundwater. As such, long-term risk associated with impacted groundwater in the areas of WS34 are not deemed significant.

Outcome: No further assessment required.

7.6 Source – Former Halting Site

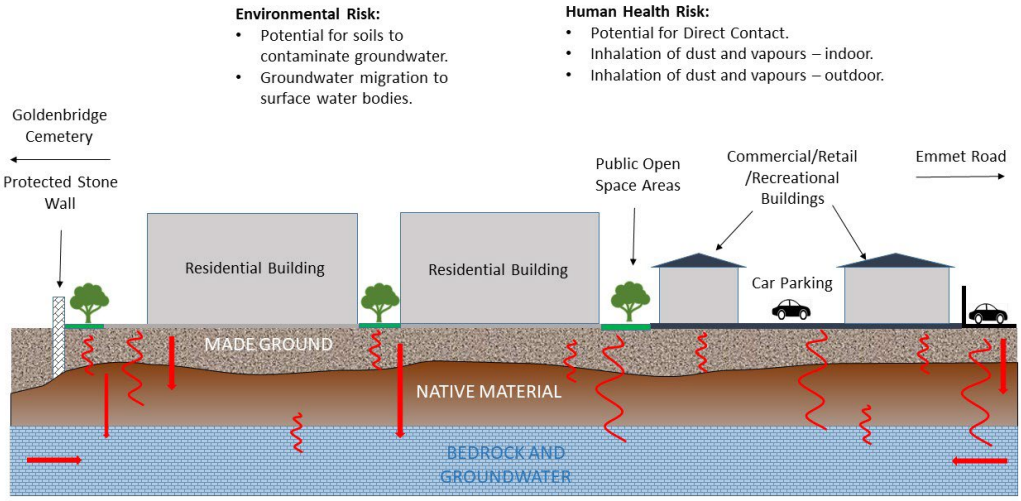
The former halting site within the site area, located directly east of the Pigeon Club, was not accessible during the site investigation. This area was bounded by stone walls and contained large boulders, shrubs, trees and fly-tipped waste. Any potential

contamination with this area is unknown and would require an additional site investigation when the obstructions are removed to assess the potential risk with the former halting site.

Outcome: Further assessment required.

7.7 Refined CSM

Table 7.1 Summary Revised Conceptual Site Model



SOURCE	PATHWAY	RECEPTOR	POTENTIAL POLLUTANT LINKAGE Y/N	RISK
Environmental				
Migration of contamination from adjacent properties	Perched groundwater flow into and through the site	Groundwater in the bedrock aquifer	Y	Low Risk
Potential contamination from historical usage (former military operations, former fuel storage tanks, construction and demolition works, former use as a halting site, and PACM)	Leaching contaminants from made ground.	Perched Groundwater	Y	Low Risk
	Perched groundwater leaching and transporting contaminants from made ground	Groundwater in the bedrock aquifer.	Y	Low Risk
Potential contamination from historical usage (former military operations, former fuel storage tanks, construction and demolition works, former use as a halting site, and PACM)	Surface deposition	Soils	Y	Medium Risk
Human Health				
Potential contamination from a) Imported made ground b) Past site usage including former military operations, former fuel storage tanks, construction and demolition works, former use as a halting site, and PACM	Vapour migration to indoor and outdoor air	Residential occupants onsite and offsite	Y	Low Risk
Migration of contamination from adjacent properties	Inhalation/ dermal contact/	Residential occupants	Y	Low Risk

SOURCE	PATHWAY	RECEPTOR	POTENTIAL POLLUTANT LINKAGE Y/N	RISK
Potential contamination from a) Imported made ground b) Past site usage including former military operations, former fuel storage tanks, construction and demolition works, former use as a halting site, and PACM	ingestion of soils/ dusts.	onsite and offsite	Y	Medium Risk
Potential contamination within groundwater.	Migration of contaminants in the bedrock aquifer.	Groundwater users	Y	Low Risk

Note: Generic risk assessments do not assess risks to construction workers who are managed under the Safety and Welfare at Work Regulations.

A simple pictorial illustration of the revised CSM following the development is included in Figure 7.1.

Figure 7.1 Revised Conceptual Site Model

8 SUMMARY, CONCLUSIONS AND RECOMMENDATIONS

- The site for assessment is on Emmet Road at Inchicore, Dublin 8 and currently comprises of a vacant grass field (demolished former St. Michael's residential estate), a former halting site, a recreational club building, an employment building centre, and a health community centre. The surrounding area is a mixture of residential, commercial/industrial/retail and recreational land use.
- The proposed development includes the provision of residential buildings in addition to commercial, retail and community facilities and all associated with new infrastructure, including roads, footpaths, services and landscaping.
- Fly-tipped waste was visible throughout the site during the site walkover and site investigation visits. Evidence of burning of waste and material on site was also observed.
- The former halting site, located directly east of the Pigeon Club, was not accessible during the site investigation and was bounded by stone walls and inside contained large boulders, shrubs, trees and fly-tipped waste.
- A window sampling, trial pit, and borehole investigation was completed in October 2020. A total of 221No. soil samples were collected and submitted to Element and IOM laboratories for analysis.
- A Generic Quantitative Risk Assessment identified that the risk from the material in terms of 'Residential', 'Commercial' and 'Public Open Space (Resi)' scenarios are acceptable with the following exclusions: 20No. of the 221No. samples contained concentrations in excess of their GACs.
    - TPH CWG Aliphatics in 9No. samples exceeded the Residential GAC.
    - TPH CWG Aromatics in 1No. sample exceeded the Residential GAC.
    - Dibenzo(ah)anthracene in 1No. sample exceeded the Residential GAC.
    - Arsenic in 7No. samples exceeded the Residential GAC.
    - Arsenic in 2No. samples also exceeded the POS (Resi) GAC.
    - Lead in 2No. samples exceeded the Residential GAC.
- WS15, WS16, WS17, TP19, WS20, WS37 and WS49 had exceedances above the GACs for arsenic. WS38 and WS47 had exceedances above the GACs for lead. WS13 had an exceedance above the GAC for dibenzo(ah)anthracene. WS30, TP33, WS34, WS39, and TP40 had exceedances above the GACs for TPH CWG Aliphatics (C10-C12). WS34 and WS39 had exceedances above the GACs for TPH CWG Aliphatics (C12-C16), and WS34 had a GAC exceedance for TPH CWG Aromatics (EC10-EC12).
- As part of the design it will be possible to break the Source Pathway Receptor linkage using the proposed buildings and hardstanding. This is particularly relevant for arsenic, lead and dibenzo(ah)anthracene exceedances. However, TPH exceedances will require additional modelling, mitigation, or removal of the material to successfully break the SPR linkage adjacent to WS30, TP33, WS34, WS39, and TP40.
- Asbestos was detected in WS13 (0-1mbgl) at 0.176% asbestos from ACM and in TP19 (2-3mbgl) at 0.003% asbestos as unbound fibres.

- Gas monitoring was undertaken on 7No. occasions from November 2020 to December 2020 from 10No. monitoring wells on-site by an OCSC Environmental Consultant during rising and falling barometric conditions. Methane was detected at BH08 during two events with 0.1% on 3rd December 2020 and 0.4% on 16th December 2020. Methane was also detected at WS34 during four events with the highest stable concentration of 0.5% on 17th November 2020. Methane was not detected in any other boreholes. Carbon dioxide was detected in all wells monitored and the highest peak concentration was observed in WS44 at 3.9% (stable CO2). Concentrations in this well fluctuated from 2.6 % to 3.9%. All detections outside of WS44 were between 0% to 3.4%, with WS43 having the next highest concentration of stable carbon dioxide. A gas risk assessment completed indicated that the risk from ground gas as CS1 which represents a Very low risk.
- A groundwater assessment was carried in January 2021 and three (3No.) groundwater samples were collected and submitted for analysis. Concentrations of PAHs and arsenic exceeded their respective GACs. Some of the exceedances are likely to reflect historical onsite sources such as an old tank located close to WS34 and WS43. However, this contamination likely represents small scale groundwater contamination resulting from soil contamination associated with past site use. Contaminated soil removal will be undertaken as part of bulk excavation for site redevelopment which thereby reducing sources of potential contamination to groundwater. As such, long-term risk associated with impacted groundwater in the areas of WS34 and WS43 are not deemed significant.
- The 3No. groundwater samples were assessed compared with Society of Brownfield Risk Assessment (SoBRA) GAC for Assessing Vapour Risks to Human Health from Volatile Contaminants in Groundwater. The only GAC exceedance for 'Residential' and 'Commercial' scenarios was TPH at WS34.

8.1 Recommendations

- Remove any fly-tipped waste on-site and ensure that there is no asbestos or hazardous debris within the waste on site prior to bulk excavation.
- Consider undertaking additional site investigation of the former halting site.
- An asbestos survey should be completed in the buildings to be demolished or refurbished prior to the demolition of any buildings or removal of material.
- It is recommended that a watching brief is undertaken for asbestos containing materials or observed contamination to ensure the most appropriate disposal.
- As part of the design, it will be possible to break the Source Pathway Receptor linkage using the proposed buildings and hardstanding. This is particularly relevant for arsenic, lead and dibenzo(ah)anthracene exceedances. Break the Source Pathway Receptors at WS15 (0.03-1mbgl), WS16 (0-1mbgl), WS17 (0-1mbgl), TP19 (0-1mbgl), WS20 (0-1mbgl), WS37 (0-1mbgl), WS38 (0-1mbgl), WS47 (0.8-1.0mbgl), WS49 (0-0.9mbgl), and WS13 (0-1mbgl) areas if material

is not removed as part of construction. This can take the form of hardstanding or capping with 1m of clean material.

- TPH exceedances will require additional modelling, mitigation, or removal of impacted material to successfully break the SPR linkage adjacent to WS30, TP33, WS34, WS39, and TP40.
- PAHs exceedances will require additional modelling, mitigation, or removal of impacted material to successfully break the SPR linkage adjacent to WS34, and TP43.
- Overall, once developed, all of the SPR linkages will be addressed by engineering methods such as hardstanding or building construction along with the removal of contaminated soil.

Notes:
GACs Copyright Land Quality Management Limited reproduced with permission; Publication Number S4UL3583. All rights reserved.
Data columns shown light grey are samples of soils that will be removed during construction.
*Indicates GAC values from SP1010: Development of Category 4 Screening Levels for Assessment of Land Affected by Contamination - Policy Companion Document published in 2014.
NAD = No Asbestos Detected.
NA/- = Not Available.
EIC/AGS/CL:AIRE Soil Generic Assessment Criteria for Human Health Risk Assessment published in 2010.
+ GAC S4ULs EC >35- 44 were used in the absense of suitable for use levels for EC>35-40
^ Indicates Intervention Values taken from **DUTCH INTERVENTION 2009**
& Since xylenes are reported as m&p xylene, hence the GAC limit was taken as the lower limit for the individual xylene type as a conservative approach.

Notes:
GACs Copyright Land Quality Management Limited reproduced with permission; Publication Number S4ULS3583. All rights reserved.
Data colums shown light grey are samples of soils that will be removed during construction.
*Indicates GAC values from SP1010: Development of Category 4 Screening Levels for Assessment of Land Affected by Contamination - Policy Companion Document published in 2014.
NAD = No Asbestos Detected.
NA/- = Not Available.
EIC/AGS/CL:AIRE Soil Generic Assessment Criteria for Human Health Risk Assessment published in 2010.
+ GAC S4ULs EC >35- 44 were used in the absense of suitable for use levels for EC>35-40
^ Indicates Intervention Values taken from **DUTCH INTERVENTION 2009**
& Since xylenes are reported as m&p xylene, hence the GAC limit was taken as the lower limit for the individual xylene type as a conservative approach.

Notes:
GACs Copyright Land Quality Management Limited reproduced with permission; Publication Number S4ULS583. All rights reserved.
Data colums shown light grey are samples of soils that will be removed during construction.
*Indicates GAC values from SP1010: Development of Category 4 Screening Levels for Assessment of Land Affected by Contamination - Policy Companion Document published in 2014.
NAD = No Asbestos Detected.
NA/- = Not Available.
EIC/AGS/CL:AIRE Soil Generic Assessment Criteria for Human Health Risk Assessment published in 2010.
+ GAC S4ULs EC >35- 44 were used in the absense of suitable for use levels for EC>35-40
^ Indicates Intervention Values taken from **DUTCH INTERVENTION 2009**
& Since xylenes are reported as m&p xylene, hence the GAC limit was taken as the lower limit for the individual xylene type as a conservative approach.

Notes:
GACs Copyright Land Quality Management Limited reproduced with permission; Publication Number S4ULS583. All rights reserved.
Data colums shown light grey are samples of soils that will be removed during construction.
*Indicates GAC values from SP1010: Development of Category 4 Screening Levels for Assessment of Land Affected by Contamination - Policy Companion Document published in 2014.
NAD = No Asbestos Detected.
NA/- = Not Available.
EIC/AGS/CL:AIRE Soil Generic Assessment Criteria for Human Health Risk Assessment published in 2010.
+ GAC S4ULs EC >35- 44 were used in the absense of suitable for use levels for EC>35-40
^ Indicates Intervention Values taken from **DUTCH INTERVENTION 2009**
& Since xylenes are reported as m&p xylene, hence the GAC limit was taken as the lower limit for the individual xylene type as a conservative approach.

Notes:
GACs Copyright Land Quality Management Limited reproduced with permission; Publication Number S4ULS583. All rights reserved.
Data columns shown light grey are samples of soils that will be removed during construction.
*Indicates GAC values from SP1010: Development of Category 4 Screening Levels for Assessment of Land Affected by Contamination - Policy Companion Document published in 2014.
NAD = No Asbestos Detected.
NA/- = Not Available.
EIC/AGS/CL:AIRE Soil Generic Assessment Criteria for Human Health Risk Assessment published in 2010.
+ GAC S4ULs EC >35- 44 were used in the absense of suitable for use levels for EC>35-40
^ Indicates Intervention Values taken from **DUTCH INTERVENTION 2009**
& Since xylenes are reported as m&p xylene, hence the GAC limit was taken as the lower limit for the individual xylene type as a conservative approach.

Notes:
GACs Copyright Land Quality Management Limited reproduced with permission; Publication Number S4ULS3583. All rights reserved.
Data columns shown light grey are samples of soils that will be removed during construction.
*Indicates GAC values from SP1010: Development of Category 4 Screening Levels for Assessment of Land Affected by Contamination - Policy Companion Document published in 2014.
NAD = No Asbestos Detected.
NA/- = Not Available.
EIC/AGS/CL:AIRE Soil Generic Assessment Criteria for Human Health Risk Assessment published in 2010.
+ GAC S4ULs EC >35- 44 were used in the absense of suitable for use levels for EC>35-40
^ Indicates Intervention Values taken from **DUTCH INTERVENTION 2009**
& Since xylenes are reported as m&p xylene, hence the GAC limit was taken as the lower limit for the individual xylene type as a conservative approach.

Notes:
GACs Copyright Land Quality Management Limited reproduced with permission; Publication Number S4ULS583. All rights reserved.
Data colums shown light grey are samples of soils that will be removed during construction.
*Indicates GAC values from SP1010: Development of Category 4 Screening Levels for Assessment of Land Affected by Contamination - Policy Companion Document published in 2014.
NAD = No Asbestos Detected.
NA/- = Not Available.
EIC/AGS/CL:AIRE Soil Generic Assessment Criteria for Human Health Risk Assessment published in 2010.
+ GAC S4ULs EC >35- 44 were used in the absense of suitable for use levels for EC>35-40
^ Indicates Intervention Values taken from **DUTCH INTERVENTION 2009**
& Since xylenes are reported as m&p xylene, hence the GAC limit was taken as the lower limit for the individual xylene type as a conservative approach.

Notes:
GACs Copyright Land Quality Management Limited reproduced with permission; Publication Number S4ULS3S83. All rights reserved.
Data columns shown light grey are samples of soils that will be removed during construction.
*Indicates GAC values from SP1010: Development of Category 4 Screening Levels for Assessment of Land Affected by Contamination - Policy Companion Document published in 2014.
NAD = No Asbestos Detected.
NA/- = Not Available.
EIC/AGS/CL:AIRE Soil Generic Assessment Criteria for Human Health Risk Assessment published in 2010.
+ GAC S4ULs EC >35- 44 were used in the absense of suitable for use levels for EC>35-40
^ Indicates Intervention Values taken from **DUTCH INTERVENTION 2009**
& Since xylenes are reported as m&p xylene, hence the GAC limit was taken as the lower limit for the individual xylene type as a conservative approach.

Notes:
GACs Copyright Land Quality Management Limited reproduced with permission; Publication Number S4ULS583. All rights reserved.
Data columns shown light grey are samples of soils that will be removed during construction.
*Indicates GAC values from SP1010: Development of Category 4 Screening Levels for Assessment of Land Affected by Contamination - Policy Companion Document published in 2014.
NAD = No Asbestos Detected.
NA/- = Not Available.
EIC/AGS/CL:AIRE Soil Generic Assessment Criteria for Human Health Risk Assessment published in 2010.
+ GAC S4ULs EC >35- 44 were used in the absense of suitable for use levels for EC>35-40
^ Indicates Intervention Values taken from **DUTCH INTERVENTION 2009**
& Since xylenes are reported as m&p-xylene, hence the GAC limit was taken as the lower limit for the individual xylene type as a conservative approach.

Appendix C4 Utilities Survey

PAS 128: 2014 (Quality of Survey Level Outputs):

DESKTOP UTILITY RECORDS SEARCH	
QL-D	Drafted from utility records
SITE RECONNAISSANCE	
QL-C	Location Demonstrated by visual reference to street furniture or evidence of previous streetworks, ie - reinstatement scars
DETECTION	
QL-B4	A segment of utility suspected to exist but has not been detected by a geophysical technique
QL-B3	Horizontal location only of the utility detected by one of the geophysical techniques used
QL-B2	Horizontal and vertical location of the utility detected by one of the geophysical techniques used
QL-B1	Horizontal and vertical location of the utility detected by multiple geophysical techniques
VERIFICATION	
QL-A	Horizontal and vertical location of the top and/or bottom of the utility

Apex Surveys Ltd. Disclaimer - Utility Survey

The interpretative nature and the non-intrusive, indirect and non-destructive survey methods must be taken into account when considering the results of the surveys. Therefore Apex Surveys, while using appropriate practice to execute, interpret and present the data, gives no guarantees that all underground utilities and underground structures will be located and mapped. Furthermore, Apex Surveys cannot guarantee the accuracy of the utility depths annotated on the survey drawings.
Apex Survey shall not be liable for any omissions or inaccuracies in the survey which arise due to the limitations of the service. No liability shall attach to Apex Surveys, in any circumstances, howsoever arising, in respect of any consequential loss or damages suffered by the Client.

The following is a non-exhaustive list of the limitations of utility surveys:

The Survey aims to map existing utilities subsurface utilities and provide information with respect to pipe size, material type and drainage connectivity. However utility surveying is limited by the following guidelines and it may not be possible to accurately survey, define and locate all services and sub-surface features.

- Depth of Utility: The depth and size of a utility affect the signal response and the degree with which a utility can be located.
  Due to attenuation of the radar signal with depth, resolution is restricted, hence making identification of utilities more difficult with increasing depth.
- Size of Utility: The smaller the diameter of a utility the more difficult it is to locate. This difficulty increases with depth.
- Ground Conditions: The depth penetration and quality of the data depends on the ground conditions of the site. GPR Surveying works best within high resistivity material. Clay overburden can impair GPR Surveying. Poor data may be a result of areas with high conductivity.
- Utility Congestion: Where different utilities converge together into a service corridor or cross paths it becomes difficult to isolate a specific utility and to map its route. The reflected signal will display a single response to multiple utilities. Therefore multiple utilities may appear to be a single utility. Where similar services run on close proximity, separation may be impossible.
- Signal Jumping: Signal from surrounding services may 'jump' to a highly conductive line masking its true identity.
- Shadowing: (of deeper utilities by shallower objects) Shallow utilities will mask the existence of deeper utilities where they are in close proximity. Also, high reflective materials close to the surface i.e rebar may hide deeper anomalies.
- Surface Obstructions: The GPR system relies on a relatively flat and even surface on which to perform radar passes. If ground obstructions such as vehicles, organic material (long grass, scrub) or undulating ground surface are present then the acquired data will be of lower resolution and in some cases not viable.
- Loss of signal: It is not always possible to trace the entire length of each underground service.
- Connections between manholes: Connections between manhole chambers are assumed to be straight.
- Non-metallic objects: Nonmetallic objects are amongst the most difficult to trace therefore successful tracing of non-metallic pipes/ utilities may be limited.
- Fiber Optic Cables: Fiber optic cables may not be possible to locate except where laid with a built in tracer wire or similar conductor system.
- Defective / flooded manholes or pipework: It may not be possible to establish connections between flooded or defective manholes or pipework.
- Acute bends in pipework: It may not be possible to trace a pipe past an acute bend.

Accuracy estimates:

- Locational accuracy is determined by referring to the manufacturers guidelines for the detector used.
- In ideal conditions the spatial accuracies for the underground utilities may be +/- 5% for Radiodetection and +/- 10% of depth for the GPR to 2.5m deep. However variations within the subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- Plan accuracies of + or - 150mm may be achieved but this figure will depend on the depth of service below ground level. However variations within the subsurface subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- DP represents distance from the surface level to the top of the service/ target
- Where technically possible, depth indications will be given. These along with plan positions should be used for guidance only and wherever critical accuracy is required these should be confirmed by the client by undertaking trial excavations or similar.

Record Drawing Information

- Services which have been untraceable are shown from records where possible or available. These lines are annotated as “Taken From Records” or “From Records”.
- Existing record information showing underground services is often incomplete and with unknown accuracies therefore it should be regarded as indicative only.
- Where Apex Surveys issue a utility drawing, this should be read in conjunction with all available public or private utility records.
- Apex Surveys endeavor to add relevant Public Utility record information onto the final drawing. However, we would recommend that direct contact is made with the asset owner or statutory undertaker.
- We shall not be held responsible for the accuracy, or otherwise, of the location of a service, as issued by the utility provider and therefore shown as “Taken for Records” on the drawing.

The following have been excluded from the survey:

- Location of individual service feeds to properties or buildings as access would be required into each property to apply direct connections to inlet points and this would significantly increase the scope of works, survey cost and also cause possible disruption to occupants.
- Pot ended or disconnected cables or terminated short lengths of pipe.
- Internal building services.
- Small diameter cables less than 20mm diameter or pipes less than 40mm diameter.
- Above ground services unless specifically requested.
- Lifting manholes which require longer than 10 minutes effort using standard heavy duty apparatus.

All works carried out be Apex Surveys conforms to the guidelines set out by The Survey Association (TSA) and PAS:128 Standard for utility mapping

Apex Surveys Ltd. Disclaimer - Utility Survey

The interpretative nature and the non-intrusive, indirect and non-destructive survey methods must be taken into account when considering the results of the surveys. Therefore Apex Surveys, while using appropriate practice to execute, interpret and present the data, gives no guarantees that all underground utilities and underground structures will be located and mapped. Furthermore, Apex Surveys cannot guarantee the accuracy of the utility depths annotated on the survey drawings.
Apex Survey shall not be liable for any omissions or inaccuracies in the survey which arise due to the limitations of the service. No liability shall attach to Apex Surveys, in any circumstances, howsoever arising, in respect of any consequential loss or damages suffered by the Client.

The following is a non-exhaustive list of the limitations of utility surveys:

The Survey aims to map existing utilities subsurface utilities and provide information with respect to pipe size, material type and drainage connectivity. However utility surveying is limited by the following guidelines and it may not be possible to accurately survey, define and locate all services and sub-surface features.

- Depth of Utility: The depth and size of a utility affect the signal response and the degree with which a utility can be located.
  Due to attenuation of the radar signal with depth, resolution is restricted, hence making identification of utilities more difficult with increasing depth.
- Size of Utility: The smaller the diameter of a utility the more difficult it is to locate. This difficulty increases with depth.
- Ground Conditions: The depth penetration and quality of the data depends on the ground conditions of the site. GPR Surveying works best within high resistivity material. Clay overburden can impair GPR Surveying. Poor data may be a result of areas with high conductivity.
- Utility Congestion: Where different utilities converge together into a service corridor or cross paths it becomes difficult to isolate a specific utility and to map its route. The reflected signal will display a single response to multiple utilities. Therefore multiple utilities may appear to be a single utility. Where similar services run on close proximity, separation may be impossible.
- Signal Jumping: Signal from surrounding services may 'jump' to a highly conductive line masking its true identity.
- Shadowing: (of deeper utilities by shallower objects) Shallow utilities will mask the existence of deeper utilities where they are in close proximity. Also, high reflective materials close to the surface i.e rebar may hide deeper anomalies.
- Surface Obstructions: The GPR system relies on a relatively flat and even surface on which to perform radar passes. If ground obstructions such as vehicles, organic material (long grass, scrub) or undulating ground surface are present then the acquired data will be of lower resolution and in some cases not viable.
- Loss of signal: It is not always possible to trace the entire length of each underground service.
- Connections between manholes: Connections between manhole chambers are assumed to be straight.
- Non-metallic objects: Nonmetallic objects are amongst the most difficult to trace therefore successful tracing of non-metallic pipes/ utilities may be limited.
- Fiber Optic Cables: Fiber optic cables may not be possible to locate except where laid with a built in tracer wire or similar conductor system.
- Defective / flooded manholes or pipework: It may not be possible to establish connections between flooded or defective manholes or pipework.
- Acute bends in pipework: It may not be possible to trace a pipe past an acute bend.

Accuracy estimates:

- Locational accuracy is determined by referring to the manufacturers guidelines for the detector used.
- In ideal conditions the spatial accuracies for the underground utilities may be +/- 5% for Radiodetection and +/- 10% of depth for the GPR to 2.5m deep. However variations within the subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- Plan accuracies of + or - 150mm may be achieved but this figure will depend on the depth of service below ground level. However variations within the subsurface subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- DP represents distance from the surface level to the top of the service/ target
- Where technically possible, depth indications will be given. These along with plan positions should be used for guidance only and wherever critical accuracy is required these should be confirmed by the client by undertaking trial excavations or similar.

Record Drawing Information

- Services which have been untraceable are shown from records where possible or available. These lines are annotated as "Taken From Records" or "From Records".
- Existing record information showing underground services is often incomplete and with unknown accuracies therefore it should be regarded as indicative only.
- Where Apex Surveys issue a utility drawing, this should be read in conjunction with all available public or private utility records.
- Apex Surveys endeavor to add relevant Public Utility record information onto the final drawing. However, we would recommend that direct contact is made with the asset owner or statutory undertaker.
- We shall not be held responsible for the accuracy, or otherwise, of the location of a service, as issued by the utility provider and therefore shown as "Taken for Records" on the drawing.

The following have been excluded from the survey:

- Location of individual service feeds to properties or buildings as access would be required into each property to apply direct connections to inlet points and this would significantly increase the scope of works, survey cost and also cause possible disruption to occupants.
- Pot ended or disconnected cables or terminated short lengths of pipe.
- Internal building services.
- Small diameter cables less than 20mm diameter or pipes less than 40mm diameter.
- Above ground services unless specifically requested.
- Lifting manholes which require longer than 10 minutes effort using standard heavy duty apparatus.

All works carried out be Apex Surveys conforms to the guidelines set out by The Survey Association (TSA) and PAS:128 Standard for utility mapping

DESKTOP UTILITY RECORDS SEARCH

QL-D	Drafted from utility records

SITE RECONNAISSANCE

QL-C	Location Demonstrated by visual reference to street furniture or evidence of previous streetworks, ie - reinstatement scars

DETECTION

QL-B4	A segment of utility suspected to exist but has not been detected by a geophysical technique
QL-B3	Horizontal location only of the utility detected by one of the geophysical techniques used
QL-B2	Horizontal and vertical location of the utility detected by one of the geophysical techniques used
QL-B1	Horizontal and vertical location of the utility detected by multiple geophysical techniques

VERIFICATION

QL-A	Horizontal and vertical location of the top and/or bottom of the utility

Apex Surveys Ltd. Disclaimer - Utility Survey

The interpretative nature and the non-intrusive, indirect and non-destructive survey methods must be taken into account when considering the results of the surveys. Therefore Apex Surveys, while using appropriate practice to execute, interpret and present the data, gives no guarantees that all underground utilities and underground structures will be located and mapped. Furthermore, Apex Surveys cannot guarantee the accuracy of the utility depths annotated on the survey drawings.
Apex Survey shall not be liable for any omissions or inaccuracies in the survey which arise due to the limitations of the service. No liability shall attach to Apex Surveys, in any circumstances, howsoever arising, in respect of any consequential loss or damages suffered by the Client.

The following is a non-exhaustive list of the limitations of utility surveys:

The Survey aims to map existing utilities subsurface utilities and provide information with respect to pipe size, material type and drainage connectivity. However utility surveying is limited by the following guidelines and it may not be possible to accurately survey, define and locate all services and sub-surface features.

- Depth of Utility: The depth and size of a utility affect the signal response and the degree with which a utility can be located. Due to attenuation of the radar signal with depth, resolution is restricted, hence making identification of utilities more difficult with increasing depth.
- Size of Utility: The smaller the diameter of a utility the more difficult it is to locate. This difficulty increases with depth.
- Ground Conditions: The depth penetration and quality of the data depends on the ground conditions of the site. GPR Surveying works best within high resistivity material. Clay overburden can impair GPR Surveying. Poor data may be a result of areas with high conductivity.
- Utility Congestion: Where different utilities converge together into a service corridor or cross paths it becomes difficult to isolate a specific utility and to map its route. The reflected signal will display a single response to multiple utilities. Therefore multiple utilities may appear to be a single utility. Where similar services run on close proximity, separation may be impossible.
- Signal Jumping: Signal from surrounding services may 'jump' to a highly conductive line masking its true identity.
- Shadowing: (of deeper utilities by shallower objects) Shallow utilities will mask the existence of deeper utilities where they are in close proximity. Also, high reflective materials close to the surface i.e rebar may hide deeper anomalies.
- Surface Obstructions: The GPR system relies on a relatively flat and even surface on which to perform radar passes. If ground obstructions such as vehicles, organic material (long grass, scrub) or undulating ground surface are present then the acquired data will be of lower resolution and in some cases not viable.
- Loss of signal: It is not always possible to trace the entire length of each underground service.
- Connections between manholes: Connections between manhole chambers are assumed to be straight.
- Non-metallic objects: Nonmetallic objects are amongst the most difficult to trace therefore successful tracing of non-metallic pipes/ utilities may be limited.
- Fiber Optic Cables: Fiber optic cables may not be possible to locate except where laid with a built in tracer wire or similar conductor system.
- Defective / flooded manholes or pipework: It may not be possible to establish connections between flooded or defective manholes or pipework.
- Acute bends in pipework: It may not be possible to trace a pipe past an acute bend.

Accuracy estimates:

- Locational accuracy is determined by referring to the manufacturers guidelines for the detector used.
- In ideal conditions the spatial accuracies for the underground utilities may be +/- 5% for Radiodetection and +/- 10% of depth for the GPR to 2.5m deep. However variations within the subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- Plan accuracies of + or - 150mm may be achieved but this figure will depend on the depth of service below ground level. However variations within the subsurface subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- DP represents distance from the surface level to the top of the service/ target
- Where technically possible, depth indications will be given. These along with plan positions should be used for guidance only and wherever critical accuracy is required these should be confirmed by the client by undertaking trial excavations or similar.

Record Drawing Information

- Services which have been untraceable are shown from records where possible or available. These lines are annotated as “Taken From Records” or “From Records”.
- Existing record information showing underground services is often incomplete and with unknown accuracies therefore it should be regarded as indicative only.
- Where Apex Surveys issue a utility drawing, this should be read in conjunction with all available public or private utility records.
- Apex Surveys endeavor to add relevant Public Utility record information onto the final drawing. However, we would recommend that direct contact is made with the asset owner or statutory undertaker.
- We shall not be held responsible for the accuracy, or otherwise, of the location of a service, as issued by the utility provider and therefore shown as “Taken for Records” on the drawing.

The following have been excluded from the survey:

- Location of individual service feeds to properties or buildings as access would be required into each property to apply direct connections to inlet points and this would significantly increase the scope of works, survey cost and also cause possible disruption to occupants.
- Pot ended or disconnected cables or terminated short lengths of pipe.
- Internal building services.
- Small diameter cables less than 20mm diameter or pipes less than 40mm diameter.
- Above ground services unless specifically requested.
- Lifting manholes which require longer than 10 minutes effort using standard heavy duty apparatus.

All works carried out be Apex Surveys conforms to the guidelines set out by The Survey Association (TSA) and PAS:128 Standard for utility mapping

Apex Surveys Ltd. Disclaimer - Utility Survey

The interpretative nature and the non-intrusive, indirect and non-destructive survey methods must be taken into account when considering the results of the surveys. Therefore Apex Surveys, while using appropriate practice to execute, interpret and present the data, gives no guarantees that all underground utilities and underground structures will be located and mapped. Furthermore, Apex Surveys cannot guarantee the accuracy of the utility depths annotated on the survey drawings.
Apex Survey shall not be liable for any omissions or inaccuracies in the survey which arise due to the limitations of the service. No liability shall attach to Apex Surveys, in any circumstances, howsoever arising, in respect of any consequential loss or damages suffered by the Client.

The following is a non-exhaustive list of the limitations of utility surveys:

The Survey aims to map existing utilities subsurface utilities and provide information with respect to pipe size, material type and drainage connectivity. However utility surveying is limited by the following guidelines and it may not be possible to accurately survey, define and locate all services and sub-surface features.

- Depth of Utility: The depth and size of a utility affect the signal response and the degree with which a utility can be located.
  Due to attenuation of the radar signal with depth, resolution is restricted, hence making identification of utilities more difficult with increasing depth.
- Size of Utility: The smaller the diameter of a utility the more difficult it is to locate. This difficulty increases with depth.
- Ground Conditions: The depth penetration and quality of the data depends on the ground conditions of the site. GPR Surveying works best within high resistivity material. Clay overburden can impair GPR Surveying. Poor data may be a result of areas with high conductivity.
- Utility Congestion: Where different utilities converge together into a service corridor or cross paths it becomes difficult to isolate a specific utility and to map its route. The reflected signal will display a single response to multiple utilities. Therefore multiple utilities may appear to be a single utility. Where similar services run on close proximity, separation may be impossible.
- Signal Jumping: Signal from surrounding services may 'jump' to a highly conductive line masking its true identity.
- Shadowing: (of deeper utilities by shallower objects) Shallow utilities will mask the existence of deeper utilities where they are in close proximity. Also, high reflective materials close to the surface i.e rebar may hide deeper anomalies.
- Surface Obstructions: The GPR system relies on a relatively flat and even surface on which to perform radar passes. If ground obstructions such as vehicles, organic material (long grass, scrub) or undulating ground surface are present then the acquired data will be of lower resolution and in some cases not viable.
- Loss of signal: It is not always possible to trace the entire length of each underground service.
- Connections between manholes: Connections between manhole chambers are assumed to be straight.
- Non-metallic objects: Nonmetallic objects are amongst the most difficult to trace therefore successful tracing of non-metallic pipes/ utilities may be limited.
- Fiber Optic Cables: Fiber optic cables may not be possible to locate except where laid with a built in tracer wire or similar conductor system.
- Defective / flooded manholes or pipework: It may not be possible to establish connections between flooded or defective manholes or pipework.
- Acute bends in pipework: It may not be possible to trace a pipe past an acute bend.

Accuracy estimates:

- Locational accuracy is determined by referring to the manufacturers guidelines for the detector used.
- In ideal conditions the spatial accuracies for the underground utilities may be +/- 5% for Radiodetection and +/- 10% of depth for the GPR to 2.5m deep. However variations within the subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- Plan accuracies of + or - 150mm may be achieved but this figure will depend on the depth of service below ground level. However variations within the subsurface subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- DP represents distance from the surface level to the top of the service/ target
- Where technically possible, depth indications will be given. These along with plan positions should be used for guidance only and wherever critical accuracy is required these should be confirmed by the client by undertaking trial excavations or similar.

Record Drawing Information

- Services which have been untraceable are shown from records where possible or available. These lines are annotated as "Taken From Records" or "From Records".
- Existing record information showing underground services is often incomplete and with unknown accuracies therefore it should be regarded as indicative only.
- Where Apex Surveys issue a utility drawing, this should be read in conjunction with all available public or private utility records.
- Apex Surveys endeavor to add relevant Public Utility record information onto the final drawing. However, we would recommend that direct contact is made with the asset owner or statutory undertaker.
- We shall not be held responsible for the accuracy, or otherwise, of the location of a service, as issued by the utility provider and therefore shown as "Taken for Records" on the drawing.

The following have been excluded from the survey:

- Location of individual service feeds to properties or buildings as access would be required into each property to apply direct connections to inlet points and this would significantly increase the scope of works, survey cost and also cause possible disruption to occupants.
- Pot ended or disconnected cables or terminated short lengths of pipe.
- Internal building services.
- Small diameter cables less than 20mm diameter or pipes less than 40mm diameter.
- Above ground services unless specifically requested.
- Lifting manholes which require longer than 10 minutes effort using standard heavy duty apparatus.

All works carried out be Apex Surveys conforms to the guidelines set out by The Survey Association (TSA) and PAS:128 Standard for utility mapping

Apex Surveys Ltd. Disclaimer - Utility Survey

The interpretative nature and the non-intrusive, indirect and non-destructive survey methods must be taken into account when considering the results of the surveys. Therefore Apex Surveys, while using appropriate practice to execute, interpret and present the data, gives no guarantees that all underground utilities and underground structures will be located and mapped. Furthermore, Apex Surveys cannot guarantee the accuracy of the utility depths annotated on the survey drawings.
Apex Survey shall not be liable for any omissions or inaccuracies in the survey which arise due to the limitations of the service. No liability shall attach to Apex Surveys, in any circumstances, howsoever arising, in respect of any consequential loss or damages suffered by the Client.

The following is a non-exhaustive list of the limitations of utility surveys:

The Survey aims to map existing utilities subsurface utilities and provide information with respect to pipe size, material type and drainage connectivity. However utility surveying is limited by the following guidelines and it may not be possible to accurately survey, define and locate all services and sub-surface features.

- Depth of Utility: The depth and size of a utility affect the signal response and the degree with which a utility can be located.
  Due to attenuation of the radar signal with depth, resolution is restricted, hence making identification of utilities more difficult with increasing depth.
- Size of Utility: The smaller the diameter of a utility the more difficult it is to locate. This difficulty increases with depth.
- Ground Conditions: The depth penetration and quality of the data depends on the ground conditions of the site. GPR Surveying works best within high resistivity material. Clay overburden can impair GPR Surveying. Poor data may be a result of areas with high conductivity.
- Utility Congestion: Where different utilities converge together into a service corridor or cross paths it becomes difficult to isolate a specific utility and to map its route. The reflected signal will display a single response to multiple utilities. Therefore multiple utilities may appear to be a single utility. Where similar services run on close proximity, separation may be impossible.
- Signal Jumping: Signal from surrounding services may 'jump' to a highly conductive line masking its true identity.
- Shadowing: (of deeper utilities by shallower objects) Shallow utilities will mask the existence of deeper utilities where they are in close proximity. Also, high reflective materials close to the surface i.e rebar may hide deeper anomalies.
- Surface Obstructions: The GPR system relies on a relatively flat and even surface on which to perform radar passes. If ground obstructions such as vehicles, organic material (long grass, scrub) or undulating ground surface are present then the acquired data will be of lower resolution and in some cases not viable.
- Loss of signal: It is not always possible to trace the entire length of each underground service.
- Connections between manholes: Connections between manhole chambers are assumed to be straight.
- Non-metallic objects: Nonmetallic objects are amongst the most difficult to trace therefore successful tracing of non-metallic pipes/ utilities may be limited.
- Fiber Optic Cables: Fiber optic cables may not be possible to locate except where laid with a built in tracer wire or similar conductor system.
- Defective / flooded manholes or pipework: It may not be possible to establish connections between flooded or defective manholes or pipework.
- Acute bends in pipework: It may not be possible to trace a pipe past an acute bend.

Apex Survey shall not be liable for any omissions or inaccuracies in the survey which arise due to the limitations of the service. No liability shall attach to Apex Surveys, in any circumstances, howsoever arising, in respect of any consequential loss or damages suffered by the Client.

The following is a non-exhaustive list of the limitations of utility surveys:

The Survey aims to map existing utilities subsurface utilities and provide information with respect to pipe size, material type and drainage connectivity. However utility surveying is limited by the following guidelines and it may not be possible to accurately survey, define and locate all services and sub-surface features.

- Depth of Utility: The depth and size of a utility affect the signal response and the degree with which a utility can be located.
  Due to attenuation of the radar signal with depth, resolution is restricted, hence making identification of utilities more difficult with increasing depth.
- Size of Utility: The smaller the diameter of a utility the more difficult it is to locate. This difficulty increases with depth.
- Ground Conditions: The depth penetration and quality of the data depends on the ground conditions of the site. GPR Surveying works best within high resistivity material. Clay overburden can impair GPR Surveying. Poor data may be a result of areas with high conductivity.
- Utility Congestion: Where different utilities converge together into a service corridor or cross paths it becomes difficult to isolate a specific utility and to map its route. The reflected signal will display a single response to multiple utilities. Therefore multiple utilities may appear to be a single utility. Where similar services run on close proximity, separation may be impossible.
- Signal Jumping: Signal from surrounding services may 'jump' to a highly conductive line masking its true identity.
- Shadowing: (of deeper utilities by shallower objects) Shallow utilities will mask the existence of deeper utilities where they are in close proximity. Also, high reflective materials close to the surface i.e rebar may hide deeper anomalies.
- Surface Obstructions: The GPR system relies on a relatively flat and even surface on which to perform radar passes. If ground obstructions such as vehicles, organic material (long grass, scrub) or undulating ground surface are present then the acquired data will be of lower resolution and in some cases not viable.
- Loss of signal: It is not always possible to trace the entire length of each underground service.
- Connections between manholes: Connections between manhole chambers are assumed to be straight.
- Non-metallic objects: Nonmetallic objects are amongst the most difficult to trace therefore successful tracing of non-metallic pipes/ utilities may be limited.
- Fiber Optic Cables: Fiber optic cables may not be possible to locate except where laid with a built in tracer wire or similar conductor system.
- Defective / flooded manholes or pipework: It may not be possible to establish connections between flooded or defective manholes or pipework.
- Acute bends in pipework: It may not be possible to trace a pipe past an acute bend.

Accuracy estimates:

- Locational accuracy is determined by referring to the manufacturers guidelines for the detector used.
- In ideal conditions the spatial accuracies for the underground utilities may be +/- 5% for Radiodetection and +/- 10% of depth for the GPR to 2.5m deep. However variations within the subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- Plan accuracies of + or - 150mm may be achieved but this figure will depend on the depth of service below ground level. However variations within the subsurface subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- DP represents distance from the surface level to the top of the service/ target
- Where technically possible, depth indications will be given. These along with plan positions should be used for guidance only and wherever critical accuracy is required these should be confirmed by the client by undertaking trial excavations or similar.

Record Drawing Information

- Services which have been untraceable are shown from records where possible or available. These lines are annotated as "Taken From Records" or "From Records".
- Existing record information showing underground services is often incomplete and with unknown accuracies therefore it should be regarded as indicative only.
- Where Apex Surveys issue a utility drawing, this should be read in conjunction with all available public or private utility records.
- Apex Surveys endeavor to add relevant Public Utility record information onto the final drawing. However, we would recommend that direct contact is made with the asset owner or statutory undertaker.
- We shall not be held responsible for the accuracy, or otherwise, of the location of a service, as issued by the utility provider and therefore shown as "Taken for Records" on the drawing.

The following have been excluded from the survey:

- Location of individual service feeds to properties or buildings as access would be required into each property to apply direct connections to inlet points and this would significantly increase the scope of works, survey cost and also cause possible disruption to occupants.
- Pot ended or disconnected cables or terminated short lengths of pipe.
- Internal building services.
- Small diameter cables less than 20mm diameter or pipes less than 40mm diameter.
- Above ground services unless specifically requested.
- Lifting manholes which require longer than 10 minutes effort using standard heavy duty apparatus.

All works carried out be Apex Surveys conforms to the guidelines set out by The Survey Association (TSA) and PAS:128 Standard for utility mapping

Apex Surveys Ltd. Disclaimer - Utility Survey

The interpretative nature and the non-intrusive, indirect and non-destructive survey methods must be taken into account when considering the results of the surveys. Therefore Apex Surveys, while using appropriate practice to execute, interpret and present the data, gives no guarantees that all underground utilities and underground structures will be located and mapped. Furthermore, Apex Surveys cannot guarantee the accuracy of the utility depths annotated on the survey drawings.
Apex Survey shall not be liable for any omissions or inaccuracies in the survey which arise due to the limitations of the service. No liability shall attach to Apex Surveys, in any circumstances, howsoever arising, in respect of any consequential loss or damages suffered by the Client.

The following is a non-exhaustive list of the limitations of utility surveys:

The Survey aims to map existing utilities subsurface utilities and provide information with respect to pipe size, material type and drainage connectivity. However utility surveying is limited by the following guidelines and it may not be possible to accurately survey, define and locate all services and sub-surface features.

- Depth of Utility: The depth and size of a utility affect the signal response and the degree with which a utility can be located.
  Due to attenuation of the radar signal with depth, resolution is restricted, hence making identification of utilities more difficult with increasing depth.
- Size of Utility: The smaller the diameter of a utility the more difficult it is to locate. This difficulty increases with depth.
- Ground Conditions: The depth penetration and quality of the data depends on the ground conditions of the site. GPR Surveying works best within high resistivity material. Clay overburden can impair GPR Surveying. Poor data may be a result of areas with high conductivity.
- Utility Congestion: Where different utilities converge together into a service corridor or cross paths it becomes difficult to isolate a specific utility and to map its route. The reflected signal will display a single response to multiple utilities. Therefore multiple utilities may appear to be a single utility. Where similar services run on close proximity, separation may be impossible.
- Signal Jumping: Signal from surrounding services may 'jump' to a highly conductive line masking its true identity.
- Shadowing: (of deeper utilities by shallower objects) Shallow utilities will mask the existence of deeper utilities where they are in close proximity. Also, high reflective materials close to the surface i.e rebar may hide deeper anomalies.
- Surface Obstructions: The GPR system relies on a relatively flat and even surface on which to perform radar passes. If ground obstructions such as vehicles, organic material (long grass, scrub) or undulating ground surface are present then the acquired data will be of lower resolution and in some cases not viable.
- Loss of signal: It is not always possible to trace the entire length of each underground service.
- Connections between manholes: Connections between manhole chambers are assumed to be straight.
- Non-metallic objects: Nonmetallic objects are amongst the most difficult to trace therefore successful tracing of non-metallic pipes/ utilities may be limited.
- Fiber Optic Cables: Fiber optic cables may not be possible to locate except where laid with a built in tracer wire or similar conductor system.
- Defective / flooded manholes or pipework: It may not be possible to establish connections between flooded or defective manholes or pipework.
- Acute bends in pipework: It may not be possible to trace a pipe past an acute bend.

Accuracy estimates:

- Locational accuracy is determined by referring to the manufacturers guidelines for the detector used.
- In ideal conditions the spatial accuracies for the underground utilities may be +/- 5% for Radiodetection and +/- 10% of depth for the GPR to 2.5m deep. However variations within the subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- Plan accuracies of + or - 150mm may be achieved but this figure will depend on the depth of service below ground level. However variations within the subsurface subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- DP represents distance from the surface level to the top of the service/ target
- Where technically possible, depth indications will be given. These along with plan positions should be used for guidance only and wherever critical accuracy is required these should be confirmed by the client by undertaking trial excavations or similar.

Record Drawing Information

- Services which have been untraceable are shown from records where possible or available. These lines are annotated as "Taken From Records" or "From Records".
- Existing record information showing underground services is often incomplete and with unknown accuracies therefore it should be regarded as indicative only.
- Where Apex Surveys issue a utility drawing, this should be read in conjunction with all available public or private utility records.
- Apex Surveys endeavor to add relevant Public Utility record information onto the final drawing. However, we would recommend that direct contact is made with the asset owner or statutory undertaker.
- We shall not be held responsible for the accuracy, or otherwise, of the location of a service, as issued by the utility provider and therefore shown as "Taken for Records" on the drawing.

The following have been excluded from the survey:

- Location of individual service feeds to properties or buildings as access would be required into each property to apply direct connections to inlet points and this would significantly increase the scope of works, survey cost and also cause possible disruption to occupants.
- Pot ended or disconnected cables or terminated short lengths of pipe.
- Internal building services.
- Small diameter cables less than 20mm diameter or pipes less than 40mm diameter.
- Above ground services unless specifically requested.
- Lifting manholes which require longer than 10 minutes effort using standard heavy duty apparatus.

Apex Surveys Ltd. Disclaimer - Utility Survey

The interpretative nature and the non-intrusive, indirect and non-destructive survey methods must be taken into account when considering the results of the surveys. Therefore Apex Surveys, while using appropriate practice to execute, interpret and present the data, gives no guarantees that all underground utilities and underground structures will be located and mapped. Furthermore, Apex Surveys cannot guarantee the accuracy of the utility depths annotated on the survey drawings.
Apex Survey shall not be liable for any omissions or inaccuracies in the survey which arise due to the limitations of the service. No liability shall attach to Apex Surveys, in any circumstances, howsoever arising, in respect of any consequential loss or damages suffered by the Client.

The following is a non-exhaustive list of the limitations of utility surveys:

The Survey aims to map existing utilities subsurface utilities and provide information with respect to pipe size, material type and drainage connectivity. However utility surveying is limited by the following guidelines and it may not be possible to accurately survey, define and locate all services and sub-surface features.

- Depth of Utility: The depth and size of a utility affect the signal response and the degree with which a utility can be located.
  Due to attenuation of the radar signal with depth, resolution is restricted, hence making identification of utilities more difficult with increasing depth.
- Size of Utility: The smaller the diameter of a utility the more difficult it is to locate. This difficulty increases with depth.
- Ground Conditions: The depth penetration and quality of the data depends on the ground conditions of the site. GPR Surveying works best within high resistivity material. Clay overburden can impair GPR Surveying. Poor data may be a result of areas with high conductivity.
- Utility Congestion: Where different utilities converge together into a service corridor or cross paths it becomes difficult to isolate a specific utility and to map its route. The reflected signal will display a single response to multiple utilities. Therefore multiple utilities may appear to be a single utility. Where similar services run on close proximity, separation may be impossible.
- Signal Jumping: Signal from surrounding services may 'jump' to a highly conductive line masking its true identity.
- Shadowing: (of deeper utilities by shallower objects) Shallow utilities will mask the existence of deeper utilities where they are in close proximity. Also, high reflective materials close to the surface i.e rebar may hide deeper anomalies.
- Surface Obstructions: The GPR system relies on a relatively flat and even surface on which to perform radar passes. If ground obstructions such as vehicles, organic material (long grass, scrub) or undulating ground surface are present then the acquired data will be of lower resolution and in some cases not viable.
- Loss of signal: It is not always possible to trace the entire length of each underground service.
- Connections between manholes: Connections between manhole chambers are assumed to be straight.
- Non-metallic objects: Nonmetallic objects are amongst the most difficult to trace therefore successful tracing of non-metallic pipes/ utilities may be limited.
- Fiber Optic Cables: Fiber optic cables may not be possible to locate except where laid with a built in tracer wire or similar conductor system.
- Defective / flooded manholes or pipework: It may not be possible to establish connections between flooded or defective manholes or pipework.
- Acute bends in pipework: It may not be possible to trace a pipe past an acute bend.

Accuracy estimates:

- Locational accuracy is determined by referring to the manufacturers guidelines for the detector used.
- In ideal conditions the spatial accuracies for the underground utilities may be +/- 5% for Radiodetection and +/- 10% of depth for the GPR to 2.5m deep. However variations within the subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- Plan accuracies of + or - 150mm may be achieved but this figure will depend on the depth of service below ground level. However variations within the subsurface subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- DP represents distance from the surface level to the top of the service/ target
- Where technically possible, depth indications will be given. These along with plan positions should be used for guidance only and wherever critical accuracy is required these should be confirmed by the client by undertaking trial excavations or similar.

Record Drawing Information

- Services which have been untraceable are shown from records where possible or available. These lines are annotated as “Taken From Records” or “From Records”.
- Existing record information showing underground services is often incomplete and with unknown accuracies therefore it should be regarded as indicative only.
- Where Apex Surveys issue a utility drawing, this should be read in conjunction with all available public or private utility records.
- Apex Surveys endeavor to add relevant Public Utility record information onto the final drawing. However, we would recommend that direct contact is made with the asset owner or statutory undertaker.
- We shall not be held responsible for the accuracy, or otherwise, of the location of a service, as issued by the utility provider and therefore shown as “Taken for Records” on the drawing.

The following have been excluded from the survey:

- Location of individual service feeds to properties or buildings as access would be required into each property to apply direct connections to inlet points and this would significantly increase the scope of works, survey cost and also cause possible disruption to occupants.
- Pot ended or disconnected cables or terminated short lengths of pipe.
- Internal building services.
- Small diameter cables less than 20mm diameter or pipes less than 40mm diameter.
- Above ground services unless specifically requested.
- Lifting manholes which require longer than 10 minutes effort using standard heavy duty apparatus.

Apex Surveys Ltd. Disclaimer - Utility Survey

The interpretative nature and the non-intrusive, indirect and non-destructive survey methods must be taken into account when considering the results of the surveys. Therefore Apex Surveys, while using appropriate practice to execute, interpret and present the data, gives no guarantees that all underground utilities and underground structures will be located and mapped. Furthermore, Apex Surveys cannot guarantee the accuracy of the utility depths annotated on the survey drawings.
Apex Survey shall not be liable for any omissions or inaccuracies in the survey which arise due to the limitations of the service. No liability shall attach to Apex Surveys, in any circumstances, howsoever arising, in respect of any consequential loss or damages suffered by the Client.

The following is a non-exhaustive list of the limitations of utility surveys:

The Survey aims to map existing utilities subsurface utilities and provide information with respect to pipe size, material type and drainage connectivity. However utility surveying is limited by the following guidelines and it may not be possible to accurately survey, define and locate all services and sub-surface features.

- Depth of Utility: The depth and size of a utility affect the signal response and the degree with which a utility can be located.
  Due to attenuation of the radar signal with depth, resolution is restricted, hence making identification of utilities more difficult with increasing depth.
- Size of Utility: The smaller the diameter of a utility the more difficult it is to locate. This difficulty increases with depth.
- Ground Conditions: The depth penetration and quality of the data depends on the ground conditions of the site. GPR Surveying works best within high resistivity material. Clay overburden can impair GPR Surveying. Poor data may be a result of areas with high conductivity.
- Utility Congestion: Where different utilities converge together into a service corridor or cross paths it becomes difficult to isolate a specific utility and to map its route. The reflected signal will display a single response to multiple utilities. Therefore multiple utilities may appear to be a single utility. Where similar services run on close proximity, separation may be impossible.
- Signal Jumping: Signal from surrounding services may 'jump' to a highly conductive line masking its true identity.
- Shadowing: (of deeper utilities by shallower objects) Shallow utilities will mask the existence of deeper utilities where they are in close proximity. Also, high reflective materials close to the surface i.e rebar may hide deeper anomalies.
- Surface Obstructions: The GPR system relies on a relatively flat and even surface on which to perform radar passes. If ground obstructions such as vehicles, organic material (long grass, scrub) or undulating ground surface are present then the acquired data will be of lower resolution and in some cases not viable.
- Loss of signal: It is not always possible to trace the entire length of each underground service.
- Connections between manholes: Connections between manhole chambers are assumed to be straight.
- Non-metallic objects: Nonmetallic objects are amongst the most difficult to trace therefore successful tracing of non-metallic pipes/ utilities may be limited.
- Fiber Optic Cables: Fiber optic cables may not be possible to locate except where laid with a built in tracer wire or similar conductor system.
- Defective / flooded manholes or pipework: It may not be possible to establish connections between flooded or defective manholes or pipework.
- Acute bends in pipework: It may not be possible to trace a pipe past an acute bend.

Accuracy estimates:

- Locational accuracy is determined by referring to the manufacturers guidelines for the detector used.
- In ideal conditions the spatial accuracies for the underground utilities may be +/- 5% for Radiodetection and +/- 10% of depth for the GPR to 2.5m deep. However variations within the subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- Plan accuracies of + or - 150mm may be achieved but this figure will depend on the depth of service below ground level. However variations within the subsurface subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- DP represents distance from the surface level to the top of the service/ target
- Where technically possible, depth indications will be given. These along with plan positions should be used for guidance only and wherever critical accuracy is required these should be confirmed by the client by undertaking trial excavations or similar.

Record Drawing Information

- Services which have been untraceable are shown from records where possible or available. These lines are annotated as “Taken From Records” or “From Records”.
- Existing record information showing underground services is often incomplete and with unknown accuracies therefore it should be regarded as indicative only.
- Where Apex Surveys issue a utility drawing, this should be read in conjunction with all available public or private utility records.
- Apex Surveys endeavor to add relevant Public Utility record information onto the final drawing. However, we would recommend that direct contact is made with the asset owner or statutory undertaker.
- We shall not be held responsible for the accuracy, or otherwise, of the location of a service, as issued by the utility provider and therefore shown as “Taken for Records” on the drawing.

The following have been excluded from the survey:

- Location of individual service feeds to properties or buildings as access would be required into each property to apply direct connections to inlet points and this would significantly increase the scope of works, survey cost and also cause possible disruption to occupants.
- Pot ended or disconnected cables or terminated short lengths of pipe.
- Internal building services.
- Small diameter cables less than 20mm diameter or pipes less than 40mm diameter.
- Above ground services unless specifically requested.
- Lifting manholes which require longer than 10 minutes effort using standard heavy duty apparatus.

All works carried out be Apex Surveys conforms to the guidelines set out by The Survey Association (TSA) and PAS:128 Standard for utility mapping

Apex Surveys Ltd. Disclaimer - Utility Survey

The interpretative nature and the non-intrusive, indirect and non-destructive survey methods must be taken into account when considering the results of the surveys. Therefore Apex Surveys, while using appropriate practice to execute, interpret and present the data, gives no guarantees that all underground utilities and underground structures will be located and mapped. Furthermore, Apex Surveys cannot guarantee the accuracy of the utility depths annotated on the survey drawings.
Apex Survey shall not be liable for any omissions or inaccuracies in the survey which arise due to the limitations of the service. No liability shall attach to Apex Surveys, in any circumstances, howsoever arising, in respect of any consequential loss or damages suffered by the Client.

The following is a non-exhaustive list of the limitations of utility surveys:

The Survey aims to map existing utilities subsurface utilities and provide information with respect to pipe size, material type and drainage connectivity. However utility surveying is limited by the following guidelines and it may not be possible to accurately survey, define and locate all services and sub-surface features.

- Depth of Utility: The depth and size of a utility affect the signal response and the degree with which a utility can be located.
  Due to attenuation of the radar signal with depth, resolution is restricted, hence making identification of utilities more difficult with increasing depth.
- Size of Utility: The smaller the diameter of a utility the more difficult it is to locate. This difficulty increases with depth.
- Ground Conditions: The depth penetration and quality of the data depends on the ground conditions of the site. GPR Surveying works best within high resistivity material. Clay overburden can impair GPR Surveying. Poor data may be a result of areas with high conductivity.
- Utility Congestion: Where different utilities converge together into a service corridor or cross paths it becomes difficult to isolate a specific utility and to map its route. The reflected signal will display a single response to multiple utilities. Therefore multiple utilities may appear to be a single utility. Where similar services run on close proximity, separation may be impossible.
- Signal Jumping: Signal from surrounding services may 'jump' to a highly conductive line masking its true identity.
- Shadowing: (of deeper utilities by shallower objects) Shallow utilities will mask the existence of deeper utilities where they are in close proximity. Also, high reflective materials close to the surface i.e rebar may hide deeper anomalies.
- Surface Obstructions: The GPR system relies on a relatively flat and even surface on which to perform radar passes. If ground obstructions such as vehicles, organic material (long grass, scrub) or undulating ground surface are present then the acquired data will be of lower resolution and in some cases not viable.
- Loss of signal: It is not always possible to trace the entire length of each underground service.
- Connections between manholes: Connections between manhole chambers are assumed to be straight.
- Non-metallic objects: Nonmetallic objects are amongst the most difficult to trace therefore successful tracing of non-metallic pipes/ utilities may be limited.
- Fiber Optic Cables: Fiber optic cables may not be possible to locate except where laid with a built in tracer wire or similar conductor system.
- Defective / flooded manholes or pipework: It may not be possible to establish connections between flooded or defective manholes or pipework.
- Acute bends in pipework: It may not be possible to trace a pipe past an acute bend.

Accuracy estimates:

- Locational accuracy is determined by referring to the manufacturers guidelines for the detector used.
- In ideal conditions the spatial accuracies for the underground utilities may be +/- 5% for Radiodetection and +/- 10% of depth for the GPR to 2.5m deep. However variations within the subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- Plan accuracies of + or - 150mm may be achieved but this figure will depend on the depth of service below ground level. However variations within the subsurface subsurface, depth below the ground, close proximity of other services and local magnetic, atmospheric or ground conditions, bends, lateral service connections and any of the other limitations listed in this disclaimer may alter this estimated accuracy.
- DP represents distance from the surface level to the top of the service/ target
- Where technically possible, depth indications will be given. These along with plan positions should be used for guidance only and wherever critical accuracy is required these should be confirmed by the client by undertaking trial excavations or similar.

Record Drawing Information

- Services which have been untraceable are shown from records where possible or available. These lines are annotated as "Taken From Records" or "From Records".
- Existing record information showing underground services is often incomplete and with unknown accuracies therefore it should be regarded as indicative only.
- Where Apex Surveys issue a utility drawing, this should be read in conjunction with all available public or private utility records.
- Apex Surveys endeavor to add relevant Public Utility record information onto the final drawing. However, we would recommend that direct contact is made with the asset owner or statutory undertaker.
- We shall not be held responsible for the accuracy, or otherwise, of the location of a service, as issued by the utility provider and therefore shown as "Taken for Records" on the drawing.

The following have been excluded from the survey:

- Location of individual service feeds to properties or buildings as access would be required into each property to apply direct connections to inlet points and this would significantly increase the scope of works, survey cost and also cause possible disruption to occupants.
- Pot ended or disconnected cables or terminated short lengths of pipe.
- Internal building services.
- Small diameter cables less than 20mm diameter or pipes less than 40mm diameter.
- Above ground services unless specifically requested.
- Lifting manholes which require longer than 10 minutes effort using standard heavy duty apparatus.

All works carried out be Apex Surveys conforms to the guidelines set out by The Survey Association (TSA) and PAS:128 Standard for utility mapping

1.0 INTRODUCTION

This document presents the Resource and Waste Management Plan (RWMP) for the control, management and monitoring of resources and waste associated with a proposed mixed-use development at Emmet Road, Inchicore, Dublin 8 comprising of 578 no. residential units, community facilities, a creche and retail units.

The RWMP has been prepared to demonstrate how the Construction Phase will comply with the following relevant legislation, relevant Best Practice Guidelines and Local Authority Waste Management Policies:

Waste Management Acts 1996-2011

Waste Management (Collection Permit) Regulations 2007 (SI No. 820 of 2007)

Waste Management (Collection Permit) Amendment Regulations 2008 (SI No. 87 of 2008)

EPA Best Practice Guidelines for the preparation of resource management plans for construction and demolition projects, April 2021

The Eastern-Midlands Region Waste Management Plan

Draft Dublin City Council Development Plan 2022-2028

EPA "Guidance on Soil and Stone By-Products in the context of Article 27 of the European Communities (Waste Directive) Regulations – Version 3 June 2019

The Key Aspects of this RWMP are:

1 To maximise the use of resources in the Design and Construction Phases and to minimise the generation of waste with regard to the following principals:

Green Procurement and Design
Resource Re-Use, Recycling and Management
Waste Prevention and Segregation

2 To maximise the segregation of construction and demolition waste materials on-site to produce uncontaminated waste streams for re-use and recycling both on-site and off-site.

2.0 DUBLIN CITY COUNCIL DEVELOPMENT PLAN WASTE POLICIES

The Draft *Dublin City Development Plan 2022-2028* includes specific Objectives relating to the management of Construction and Demolition Waste as follows:

DCC Policy S127
Sustainable Waste Management
To support the principles of the circular economy, good waste management and the implementation of best practice in relation to waste management in order for Dublin City and the Region to become self-sufficient in terms of resource and waste management and to provide a waste management infrastructure that supports this objective.

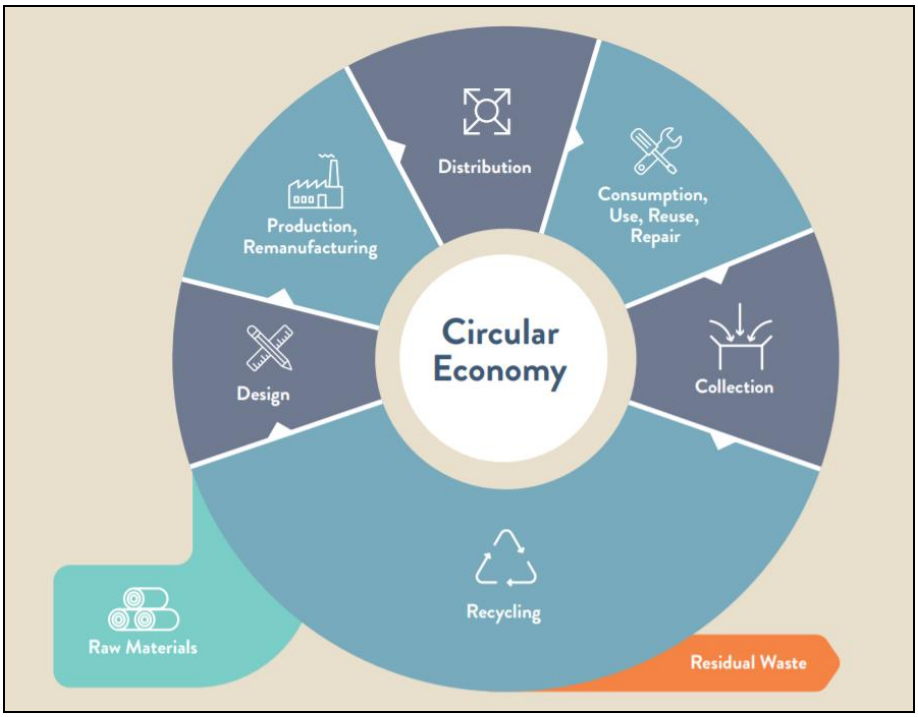
DCC Policy 128
Sustainable Waste Management
To prevent and minimise waste generation and disposal, and to prioritise prevention, recycling, preparation for reuse and recovery in order to safeguard against environmental pollution.

DCC Chapter 15.18.2 Waste Management
All planning applications in excess of 30 or more residential units and / or 1,000 sq. m. of commercial development shall be accompanied by both and Construction and Operational Waste Management Plan. The construction waste management plan may form part of the overall construction management plan and shall detail the strategy in relation to on site waste storage, segregation and disposal. Development proposals shall recycle demolition material and re-use existing building materials where possible. In all developments of 30 or more housing units or commercial developments in excess of 1,000 sq. m, a materials source and management plan showing type of materials / proportion of re use/ recycled materials to be used shall be implemented by the developer.

The *Dublin City Development Plan 2016-2022* includes specific Objectives relating to the management of Construction and Demolition Waste as follows:

DCC Policy SIO17
To promote the re-use of building materials, recycling of demolition material and the reuse of materials from renewable sources.

DCC Policy SIO19
To implement the Eastern-Midlands Region Waste Management Plan and achieve the plan targets and objectives



3.0 THE CIRCULAR ECONOMY

Ireland's national waste policy is *'A Waste Action Plan for A Circular Economy – Ireland's National Waste Policy 2020 – 2025 '.*The policy, published September 2020, is intended to move Ireland toward a circular economy in which focus is shifted away from waste disposal, favouring circularity and sustainability by identifying and maximising the value of material through improved design, durability, repair and recycling. By extending the time resources are kept within the local economy, both environmental and economic benefits are foreseen.

The proposed development will implement the above policy as follows:

- Re-Use on-site of all excavated soils and stones as fill material and as landscaping material.
- The purchase of construction materials as needed to prevent over supply and potential for damage whilst in storage.
- The segregation of construction waste streams into separate storage containers to maximise the potential for the re-use of the materials.
- The import of Article 27 soils where possible.
- The Developer of the Project is committed to implementing the relevant aspects of the Circular Economy Policy throughout the construction phase of the development.

FIGURE 1 THE CIRCULAR ECONOMY

It is Dublin City Council's intention to conform to the waste hierarchy (Figure 2), whereby waste prevention is the most preferred strategy. Where waste generation is unavoidable, re-use is the most preferred fate, followed by recycling and then energy recovery, with disposal (e.g. to landfill) being the least preferred fate.

Figure 2 The Waste Hierarchy

4.0 PROJECT DESCRIPTION

4.1 Proposed Development

The development will comprise 578 no. apartments, community facilities including a Library/Community Hub, Creche, Retail/Retail services, Café units, a supermarket and a public plaza fronting onto Emmet Road.

Figure 3 Site Location

4.2 Site History

The central and southern area of the site consists of the former St. Michaels Estate which has been demolished and exists now as open space. The north section of the site comprises a partially demolished building, as well as active recreational, social and community facilities with associated landscaping and car parking. The northern part of the site contains a number of structures which will be demolished to make way for the proposed development including St. Michaels Community Centre and the HSE Health Centre which were permitted under PRR 2221/21 The Inchicore Community Sport Centre (outside the site area) shall be retained and integrated into the design of the proposed scheme.

4.3 Existing Structures

The subject site at Emmet Road consists of a grassed area (the former St. Michael's Estate), a former halting site, former health centre building and a former community centre building.

4.4 Site Clearance

The site is currently comprised of a large grassed area (the former St. Michael's Estate), hard surfaced areas comprised of concrete and tarmacadam and buildings. The former halting site area contains historically dumped waste which will be analysed for the presence of Asbestos Containing Materials (ACM) prior to its removal off-site.

The former health centre building and a former community centre building, wall structures and hardstanding areas are to be demolished to facilitate the development.

4.5 Material Balance Cut and Fill

The estimated Cut volume is c.35,289m^3.

4.6 Site contamination

Soils at the site have been classified by *O'Connor Sutton Cronin (Report Dated Jan 2021)* following sampling, analysis and the utilisation of the *HazWasteOnline software WM3V.1.1*. The results are presented in Table 1 below.

Table 1 Soil Classification Results

A	B1	B2	C1	C2	D	D
Inert – Waste Permitted or Recovery Sites	e.g. IMS Landfill	e.g. IMS Landfill Inert Inc. Limits	Non-Haz	Non-Haz Quantifiable asbestos	Hazardous	Hazardous with Asbestos > 0.1%
11	98	30	26	1	16	1

The Waste Soil Classification Grids are presented in Appendix I.

4.7 Invasive Species

Species listed on the *Third Schedule of S.I. 477/2011 (as amended)*

An invasive species survey conducted by *Enviroguide* identified the presence of Buddleia in the northern section of the site.

An ecological assessment of the site prepared by Enviroguide has identified the presence of Buddleia plant species on the subject site. The management of the species shall be managed by cutting Buddleia plants to a basal stump during active growth (late spring to early summer) and immediately treating the total cut surface with herbicide concentrate. Monitoring will be required and retreatment, as necessary.

4.8 Asbestos

Asbestos was identified in 2. No. soil samples with values ranging between 0.003% - 0.176%.

Historically fly-tipped waste in the former halting site area shall be investigated to determine if asbestos is present.

4.9 Project Phasing

The sequence of development works are detailed below in Table 2.

Table 2 Sequence of Construction Works

Activity Sequence	General Description
Site access and security	Set up site access point and erect site hoarding
Invasive Species	Removal of Buddlea
Historic Waste	Testing and removal of waste materials
Identification of Existing Utility Services	Set up bunting, mark location of live services, including E.S.B., Gas etc.
Facilities	Install site offices and welfare units
Compounds	Establish materials storage compound and waste management compound
Demolition	Removal of existing structures
Removal of Vegetation	e.g. Trees and vegetation
Site Preparation	Soil stripping, stockpiling, export
Infrastructure installation	Drainage, Utility ducts, power, internal roads
Substructure	Foundations
Superstructure	Steel Frame
External Envelope	Place façade to superstructure
Internal Finishes	Mechanical & Electrical
External Landscaping	Hard and soft landscaping, road surfacing

5.0 RWMP ROLES AND RESPONSIBILITIES

5.1 Project Director / Manager

The Project Director will be responsible for the overall implementation of the RWMP and providing the budget for its implementation and management. The Project Director will ensure that the reporting and recording requirements are met and all necessary resources are in place to support the implementation of the RWMP from Design Stage to Project Completion.

5.2 Resource and Waste Manager

The Resource and Waste Manager (RWM) will be responsible for:

- Implementing all aspects of the RWMP throughout the Construction Phase.
- Assisting the Project Manager on the implementing of the aspects of the Circular Economy.
- Ensuring that all resources are managed throughout the Construction Phase
- Recording the volumes and types of construction wastes generated.
- Communicating with the Local Authority on waste related matters and issuing of waste records.
- Management of the waste storage compound to ensure that all construction waste streams are stored separately and that cross-contamination does not occur.
- Maintaining a file of all Waste Collection Permits and Waste Facility Permits / Waste Licences that each waste load is exported to.
- Ensuring that all waste loads exiting the site are contained in a vehicle displaying an appropriate NWCPO Permit number.
- Maintaining a receipt of each waste load delivered to authorised facilities.
- Identifying and reporting on damaged construction materials and identifying how damage to resources and materials shall be prevented.
- Preparation of monthly waste management report detailing waste volumes generated, re-use and recycling rates and details on damaged raw materials and how they can be returned for repair and future re-use.
- Conducting Resource and Waste Management Audits
- Communicating with the EPA regarding Article 27 By-Product determinations

- The name and contact details of the Resource and Waste Manager shall be forwarded to the Waste Management Section of the Local Authority on appointment.

5.3 Site Personnel

All personnel on site will be responsible for the effective implementation of the RWMP. All staff will receive Induction and Tool-Box training on resource management and waste prevention, segregation and disposal.

5.4 Gate Person

Gate Person duties will include the inspection of all vehicles exiting site with waste to ensure that they have a Waste Collection Permit (WCP) Number displayed on the side of the vehicle.

If the vehicle does not have a WCP Number displayed, the vehicle will be refused exit and the RWM will ensure that the waste load is returned to the site area from where it came.

5.5 Staff Training

Copies of the RWMP will be made available to all relevant personnel on site. The RWM will arrange for all site personnel and contractors to be instructed about / receive training on the objectives of the RWMP and materials management, and be informed of the responsibilities that fall upon them as a consequence of its implementation The topics to be covered will include;

- Project programme and requirements
- Health and Safety requirements
- RWMP
- Materials to be segregated
- Segregation systems and protocols
- Arrangement for the storage and handling of reusable materials and recyclables
- Document control requirements

Where source segregation and materials re-use techniques apply, each member of staff will be given instructions on how to comply with the RWMP and will be displayed for the benefit of site staff.

Table 2 Principal Project Staff

Title	Name	Contact Details
Project Director	TBC	
Construction Director	TBC	
Construction Manager	TBC	
Resource & Waste Manager	TBC	
Engineer	TBC	
Quantity Surveyor	TBC	
Design Lead	TBC	

TBC To be confirmed by contractor when appointed.

6.0 RESOURCE AND WASTE MANAGEMENT DESIGN APPROACH

This section provides details on how resource optimisation and the management and minimisation of waste streams shall be implemented from design phase through to completion of the project.

6.1 Site Preparation

- Reuse site hoardings and staff welfare units from previous Projects.
- Minimise concrete use in site compounds.

6.2 Re-Use of existing site elements

- Identify materials prior to demolition that can be re-used or recycled on-site to minimise the use of virgin materials.
- Hard surfaces comprised of concrete and tarmacadam may be re-used to form the ground surface of the site compound.

6.3 The Use of Recycled materials and surplus materials

- Use recycled aggregates where possible to minimise the use of virgin materials.
- Identify materials which have a % of recycled material contained within them e.g., Asphalt may include recycled glass or recycled asphalt.
- Where material surpluses arise, they shall be stored to prevent damage and re-used on other projects or returned to the supplier.

6.4 Materials Procurement

- Identify suppliers that can supply low environmental impact products and materials
- Identify recycled materials to be used on the project
- Minimise over-ordering to reduce over storage and to minimise potential of damage to materials
- Request that material suppliers take back damaged materials for repair and re-use.
- Request that suppliers minimise packaging on all materials

6.5 Off-Site Construction

The use of pre-constructed building elements is an efficient process that minimises the generation of construction site waste.

- Steel frames and wall and ceiling panels shall be constructed off-site and assembled on-site.
- Use of prefabricated composite wall panels
- Use of prefabricated concrete wall and roof panels
- Use of modular bathroom and kitchen units

7.0 DESCRIPTION OF WASTE ARISINGS

The expected construction and demolition waste quantities that will be generated throughout the course of the development are described in Table 3 below.

The calculated construction waste tonnage with the exception of soils and stones has been derived from the Building Research Establishment Environmental Assessment Method (BREEAM) which specifies that 11.1 tonnes of construction waste is generated for every 100m^2 of development area.

Table 3 Predicted construction waste

Figures referenced from Garland Report and Survey dated February 2021 Planning Reg. Ref. 2221/21

8.0 CONSTRUCTION WASTE MANAGEMENT

- It is proposed that from the outset of construction activities, a dedicated and secure compound containing bins, and skips, and storage areas, into which all waste materials generated by construction site activities, will be established within the active construction phase of the development site.

- Spill kits shall be located within the site compound with clearly labelled instructions on how they shall be used to clean up fuel/oil spills.

- All vehicle and plant oils and liquid construction materials shall be stored in secure impermeable storage units.

- All diesel-powered generators shall be inspected on at least a weekly basis by a delegate of the project manager to ensure it is not leaking diesel or oils.

- All empty containers containing residual quantities of oils, greases and hydrocarbon-based liquids shall be stored in a dedicated, clearly labelled impermeable container.

- In order to ensure that the construction contractor correctly segregate waste materials, it is the responsibility of the site construction manager to ensure all staff are informed by means of clear signage and verbal instruction and made responsible for ensuring site housekeeping and the proper segregation of construction waste materials.

- It will be the responsibility of the Resource and Waste Manager (RWM) to ensure that a written record of all quantities and natures of wastes exported off-site are maintained on-site in a Waste File at the Project office.

- It is the responsibility of the RWM that all contracted waste haulage drivers hold an appropriate Waste Collection Permit for the transport of waste loads and that all waste materials are delivered to an appropriately licenced or permitted waste facility in compliance with the following relevant Regulations:
  Waste Management (Collection Permit) Regulations 2007 (SI No. 820 of 2007)
  Waste Management (Collection Permit) Amendment Regulations 2008 (SI No. 87 of 2008)
  Waste Management (Facility Permit and Registration) Regulations S.I.821 of 2007 and the Waste Facility Permit under the Waste Management (Facility Permit and Registration) Amendment Regulations S.I.86 of 2008.

- It is proposed that waste materials will be collected and stored in separate clearly labelled skips and suitable containers in a defined and separate waste storage area in the site compound and that these materials will be collected by a Permitted Waste Contractor holding an appropriate Waste Collection permit in compliance with *Waste Management (Collection Permit) Regulations 2007 (SI No. 820 of 2007) and Waste Management (Collection Permit) Amendment Regulations 2008 (SI No. 87 of 2008)* and that they will be sent for disposal or further processing to appropriately Permitted / Licensed Waste Facilities in compliance with *Waste Management (Facility Permit and Registration) Regulations S.I. No. 821 of 2007 and the Waste Management (Facility Permit and Registration) Amendment Regulations S.I. No. 86 of 2008.*

- Prior to the commencement of the Project, the RWM shall identify a permitted Waste Contractor(s) who shall be engaged to collect and dispose of all inert and hazardous wastes arising from the project works.

- The RWM shall maintain copies of all Waste Collection Permits and copies of the Waste Facility Permit or Waste Licence to which waste materials are exported to. The RWM shall ensure that all Permits/Licences are within date.

- All waste soils prior to being exported off-site, shall be classified as inert, non-hazardous or hazardous in accordance with the *EPA's Waste Classification Guidance – List of Waste & Determining if Waste is Hazardous or Non-Hazardous* document to ensure that the waste material is transferred by an appropriately permitted waste collection permit holder and brought to an appropriately permitted or licensed waste facility.

Figure 2 Construction Waste segregation compound design concept

Figure 3 Oil Spill Kit

Figure 4 Bund for waste oil container storage

9.0 ON-SITE RESOURCE MANAGEMENT & WASTE REUSE RECYCLING AND MANAGEMENT

This section of the RWMP describes how construction waste shall be minimised and how the re-use and recycling of wastes shall be maximised

- Materials shall be ordered on an *"as needed"* basis to prevent over supply and preventing damage to bulk orders stored on-site.
- Materials shall be stored and handled in a manner that minimises the generation of damaged materials
- Materials shall be ordered in appropriate sequence to minimise materials stored on site
- All staff and Sub contractors shall be advised through inductions and tool box talks on how to dispose of their waste correctly on-site.
- Broken concrete blocks and excess aggregate materials shall be segregated and stored off-site for use as hard standing material on future projects. This will result in the following positive impacts:
    - Reduction in the requirement for virgin aggregate materials from quarries
    - Reduction in energy required to extract, process and transport virgin aggregates
    - Reduced HGV movements associated with the delivery of imported aggregates to the site
    - Reduction in the amount of landfill space required to accept C&D waste
- Excess wood will be segregated in separate skips and sent for recycling.
- Plastic arising from general waste or packaging will be segregated and stored in separate skips.
- Metals waste shall be stored in dedicated skips
- Top soil that is stripped shall be retained in managed bunds to prevent erosion and reduce the leaching of minerals from the soil.
- Any hazardous material (e.g., unknown hotspot, underground tanks) discovered during the course of the construction phase shall be isolated and the removal of contaminated materials shall be managed by the RWM.

10.0 WASTE SOILS & STONES EXPORT & ARTICLE 27 DECLARATIONS

Excavated excess soils that are required to be exported off-site shall be tested to determine their classification as hazardous or non-hazardous in accordance with EPA *Waste Classification – List of Waste & Determining if Waste is Hazardous or Non-Hazardous. Non-Hazardous soils may be suitable for re-use in other construction sites and may be declared as a by-product in accordance with Article 27* of the *European Communities (Waste Directive) Regulations 2011*. Article 27 requires that the material classified not a waste but a by-product must meet specific criteria and that that a declaration of a material as a by-product is notified to the EPA. The EPA publication *"Guidance on Soil and Stone By-Products in the context of Article 27 of the European Communities (Waste Directive) Regulations – Version 3 June 2019* shall be considered in this regard. Appendix I presents the schematic process by which a material is determined as a waste or a by-product.

The records of all Article 27 declarations and WAC Analytical Tests and *Haz Online* assessments shall be maintained on-site by the RWM.

11.0 WASTE RECORD KEEPING

It is the responsibility of the RWM that a record of all quantities and natures of all wastes reused / recycled and exported off-site during the project are maintained in a Waste File at the Project office.

The following information shall be recorded for each load of waste exported off-site:

- Waste Type EWC Code and description.
- Volume of waste collected.
- Waste collection contractor's Waste Collection Permit Number and collection receipt including vehicle registration number.
- Destination of waste load including Waste Permit / Licence number of facility.
- Description of how waste at facility shall be treated i.e. disposal / recovery / export

An indicative template is contained in Figure 4, to ensure the full traceability of waste materials to their final destination.

Verifiable and validated tracking and authorisation documentation will be maintained for all wastes destined for re-use, recovery, recycling or disposal. Justification will also be provided where a disposal option had been employed.

The waste records shall be issued to Fingal County Council as required / requested.

12.0 RESOURCE & CONSTRUCTION WASTE MANAGEMENT AUDITING

The effectiveness of a Resource and Waste Management Plan and its implementation, will be subject to quarterly audits by the RWM throughout the duration of the construction phase.

Audits will focus on materials inputs to the project and the waste outputs identifying:

Resources
How resource management was integrated into the design of project buildings and areas

Re-use, recycling of existing on-site materials prior to development including soils, buildings, structures.

Re-using surplus materials from previous development projects e.g., office cabins, fencing, aggregates, concrete products.

Additional opportunities for future resource management.

Waste
The audits will also investigate the operational factors and management policies that contribute to the generation of waste and identify appropriate corrective actions, where necessary.

Performance targets will be developed, e.g., an 85% overall recycling target, successes and failures will be recorded and Action Plans will be developed to address any issue which arise.

Inspections of the waste storage areas will be undertaken and recorded on a weekly basis, issues relating to housekeeping, inappropriate storage and segregation of wastes.

The RWM will record the findings of the audits, including types and quantities of waste arising, final treatments and costs, in a quarterly audit report.

The Final Waste Audit will examine the manner of how resources are managed and how and where the waste is produced and how waste generation can be reduced in future projects.

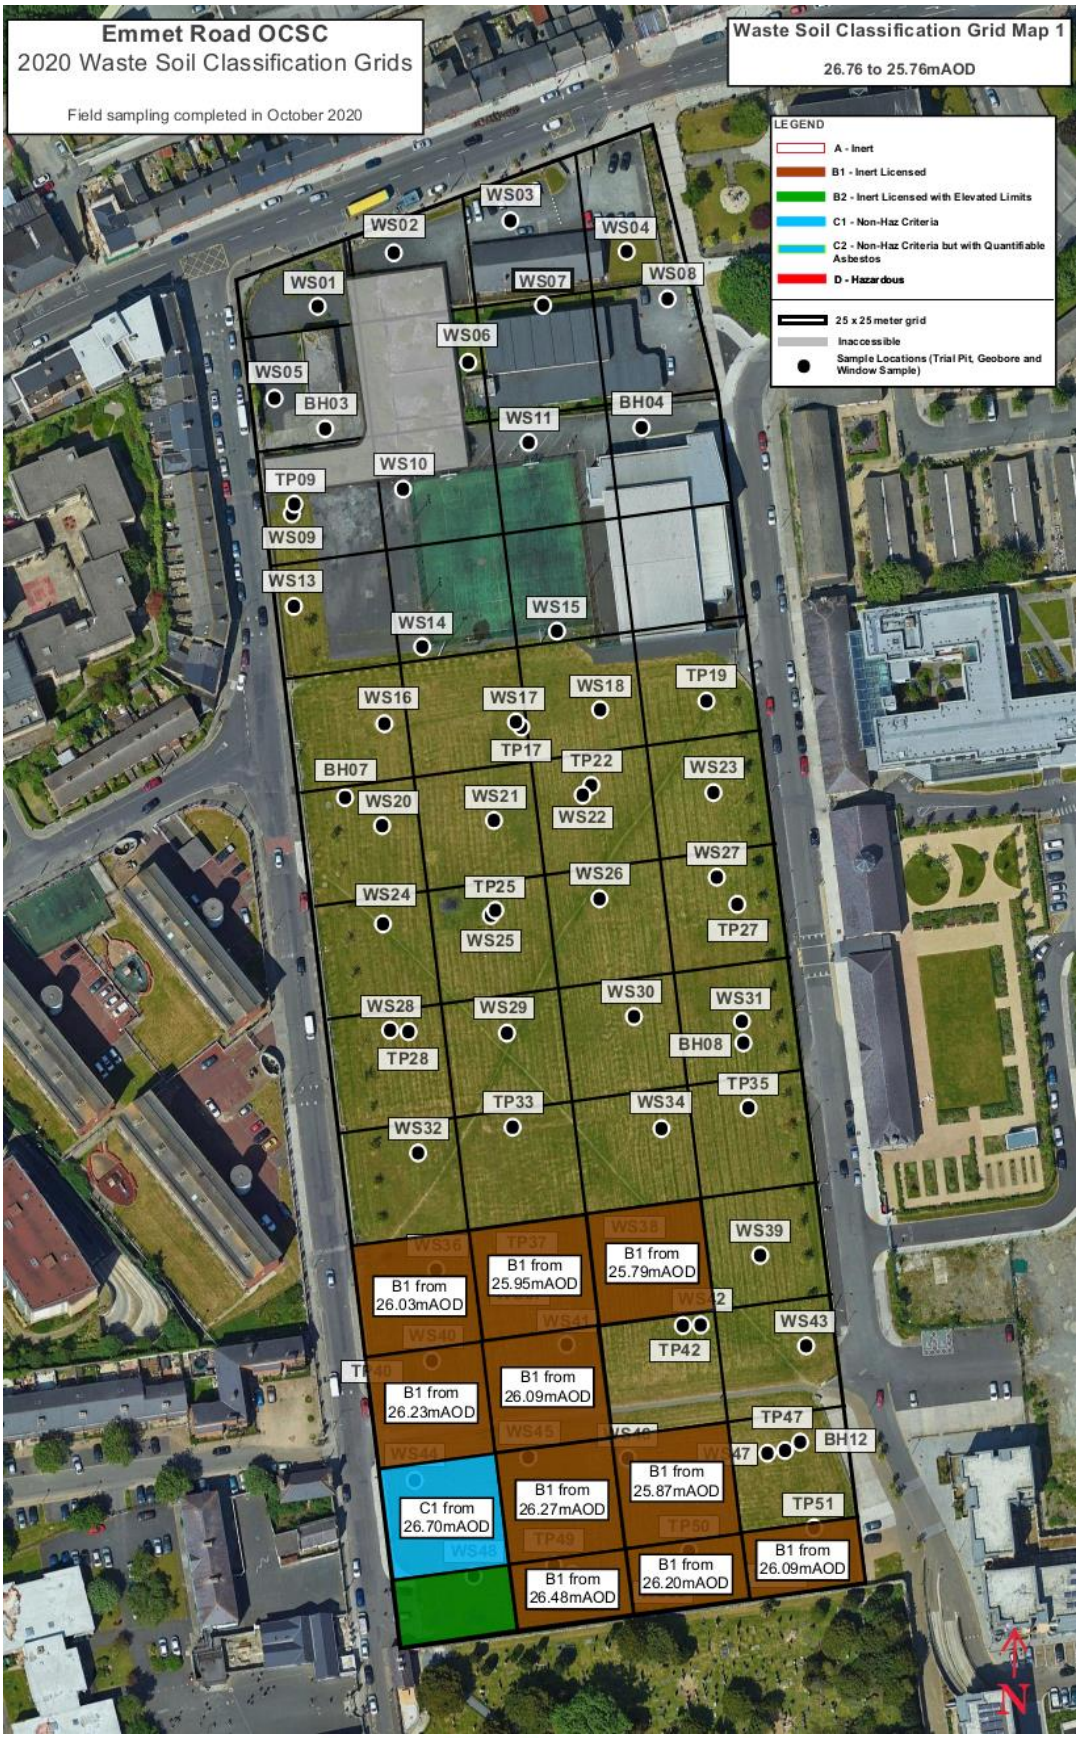
13.0 WASTE EXPORT PERMITS/LICENCES

All vehicles exiting the site containing any waste material shall be inspected by the gate man to ensure that they display on the side of the vehicle a Waste Collection Permit#.

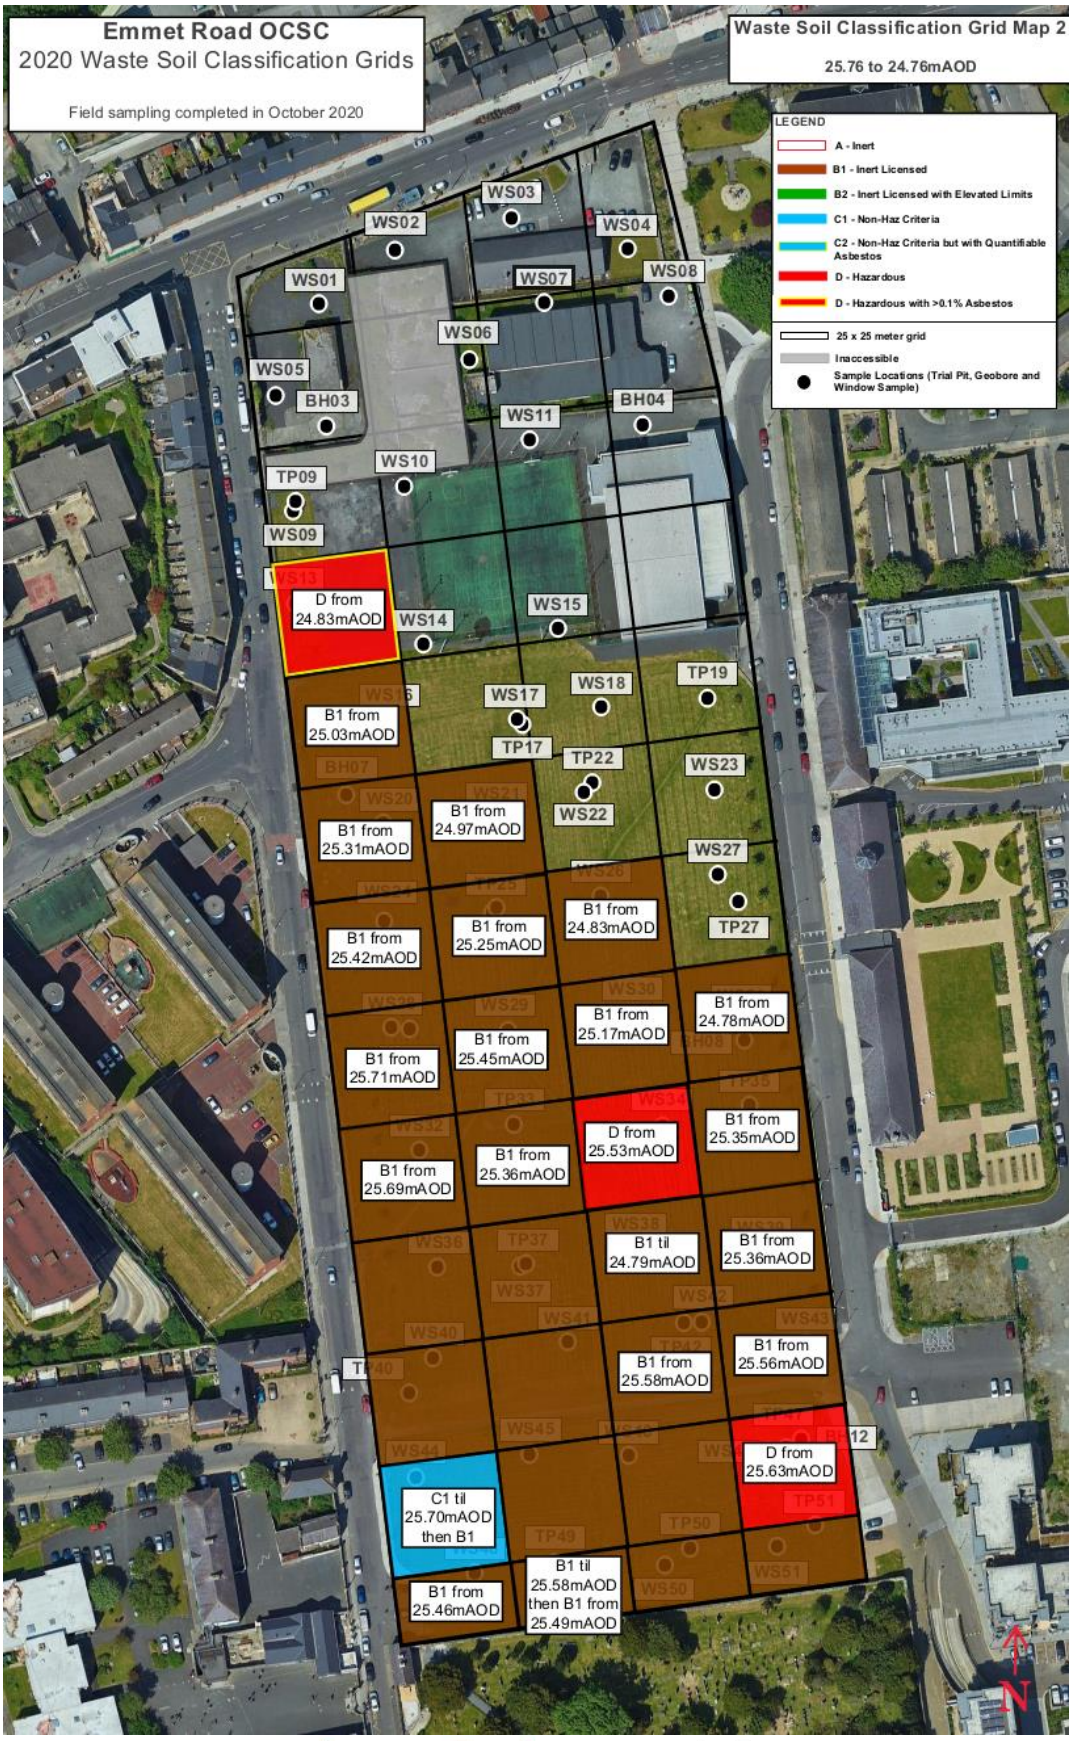
Where a Waste Collection Permit# is not displayed the RWM shall be notified and the vehicle shall be instructed to return the waste load to the specific area on the site and will not be allowed exit the site with the waste load.

Once a Demolition Contractor, Groundworks contractor and a Main Contractor have been appointed, the associated Waste Collection Permits for vehicles exporting materials off-site and the receiving facility Waste Facility Permits / Waste Licenses shall be maintained by the RWM and issued to Dublin City Council.

Table 4 Register of Waste Collection Permits and Waste Facility Permits / Licences



Contractor	Address & Contact	Waste Collection Permit #	Expiry Date	Receiving Facility	Waste Facility Permit / Licence #	Expiry Date
TBC	TBC	TBC	TBC	TBC	TBC	TBC



TBC To be confirmed by contractor when appointed.

Appendix I Bin Store and Bin Collection Locations

1.0 INTRODUCTION

This document presents the Operational Waste Management Plan (OWMP) for the control, management and monitoring of waste associated with a proposed mixed-use development at Emmet Road, Dublin 8.

The development will comprise 578 no. apartments, community facilities (including Library/Community Hub, Creche, Retail/Retail services and Café units), a supermarket, a public plaza fronting onto Emmet Road.

The **Objective of this Waste Management Plan** for the operation of the development is to maximise the quantity of waste recycled by providing sufficient waste recycling infrastructure, and to provide waste reduction initiatives and waste collection and waste management information to the residents of the development.

The **Goal of this Waste Management Plan** is to achieve a residential recycling rate of 50% of managed municipal waste in accordance with the current *Eastern-Midlands Region Waste Management Plan.*

The Waste Management Plan shall be integrated into the design and operation of the development to ensure the following:

- That sufficient waste management infrastructure is included in the design of the development to assist residents minimise the generation of mixed waste streams.
- That the principle of waste segregation at source is the integrated into the development by the provision of separate bin systems, signage and notifications.
- That the development's facility management company shall record the volumes and types of waste generated by the development to assess on an annual basis if the 50% recycling rate is being achieved.
- That all waste materials generated by site activities are removed from site by appropriately permitted waste haulage contractors and that all wastes are disposed of at approved waste licensed / permitted facilities in compliance with the Waste Management Act 1996 and all associated Waste Management Regulations.
- That the Facilities Management Company will manage wastes storage areas and provide annual bulky waste collection services to facilitate residents.

2.0 OPERATIONAL PHASE WASTE MANAGEMENT PLAN

This Operational Waste Management Plan has been prepared in accordance with the current *Eastern-Midlands Region Waste Management Plan* which defines the following Waste Targets:

- 1% reduction per annum in the quantity of household waste generated per capita over the period of the plan.

- Achieve a recycling rate of 50% of managed municipal waste.

- Reduce to 0% the direct disposal of unprocessed residual municipal waste to landfill.

The Operational Phase of the Waste Management Plan has been prepared with regard to relevant waste management policies and objectives of the *Dublin City Council Development Plan 2016 – 2022* as detailed below:

It is the Policy of Dublin City Council:	
SI19:	To support the principles of good waste management and the implementation of best international practice in relation to waste management in order for Dublin city and the region to become self-reliant in terms of waste management.
SI20:	To prevent and minimise waste and to encourage and support material sorting and recycling.
SI21:	To minimise the amount of waste which cannot be prevented and ensure it is managed and treated without causing environmental pollution.
SI22:	To ensure that effect is given as far as possible to the 'polluter pays' principle.
It is an Objective of Dublin City Council:	
SIO15:	To provide for municipal/public recycling and recovery facilities in accessible locations throughout the city.
SIO16:	To require the provision of adequately-sized recycling facilities in new commercial and large-scale residential developments, where appropriate.
SIO19:	To implement the Eastern-Midlands Regional Waste Management Plan 2015–2021 and achieve the plan targets and objectives.

The communal waste storage areas shall be designed in accordance with *Appendix 10 – Guidelines for Waste Storage Facilities – Dublin City Council Development Plan 2016 – 2022 as reproduced below:*

10.1 Standards for Apartments

Waste storage issues should be considered at the initial apartment design stage to ensure access for all (including people with disabilities) in a brightly lit, safe and well-signed area, spacious enough for easy manoeuvrability, good ventilation and ready access if required for the control of potential vermin. Where storage is provided in a basement area, sufficient access and egress must be provided to enable receptacles to be moved easily from the storage area to an appropriate collection point on the public street nearby.

The following are also requirements:

- Receptacles that are designed for reuse, with the exception of a specific area designated by a local authority as being only suitable for the collection of non-reusable receptacles such as bags, ideally of 1,100 litre capacity, must be used
- To provide a three-bin collection system for residents in communal collection schemes, for each type of waste: general waste, dry recyclables and organic food/garden waste. A proposal on the three-bin system including bin quantity, type and frequency of collection must be submitted in writing to the Waste Regulation Unit in Dublin City Council for agreement.
- Sufficient space must be provided to accommodate the collection of dry recyclables and organic kitchen waste/ garden waste.
- Suitable wastewater drainage points should be installed in the receptacle bin storage area for cleaning and disinfecting purposes.

The Operational Phase of the Waste Management Plan has also been prepared with regard to relevant waste management policies and objectives of the draft *Dublin City Council Development Plan 2022 – 2028* as detailed below:

It is the Policy of Dublin City Council:	
SI27	**Sustainable Waste Management** To support the principles of the circular economy, good waste management and the implementation of best practice in relation to waste management in order for Dublin City and the Region to become self-sufficient in terms of resource and waste management and to provide a waste management infrastructure that supports this objective.
SI28	**Sustainable Waste Management** To prevent and minimise waste generation and disposal, and to prioritise prevention, recycling, preparation for reuse and recovery in order to safeguard against environmental pollution.
SI29	**Segregated Storage and Collection of Waste Streams** To require new commercial and residential developments, to include adequate and easily accessible storage space that supports the separate collection of as many waste and recycling streams as possible, but at a minimum general domestic waste, dry recyclables and food waste as appropriate (for further guidance see Appendix 7).
SI30	**Waste Management in Apartment Schemes** To require that the storage and collection of mixed dry recyclables, organic and residual waste materials within proposed apartment schemes have regard to the Sustainable Urban Housing: Design Standards for New Apartments Guidelines for Planning Authorities 2018 (or and any future updated versions of these guidelines produced during the lifetime of this plan).
SI31	**Provision of Public Recycling Facilities in Large Retail Developments** To require new retail developments in excess of 1,000sq.m (net) in size to provide for a local bring centre/ public reuse and recycling facilities on-site, where feasible, in line with the principles of the 15-minute city. The facilities should be adequately-sized and located to be easily accessible to the general public and should specifically provide for textile and glass bottle recycling (for further guidance see Section 15.18.3).

Appendix 7 – 1.0 Design Considerations – 1.1 Standards for Residential Developments / Apartments and 1.2 Standards for Commercial/Industrial Developments of the *Draft Dublin City Council Development Plan 2022 – 2028* is reproduced below.

Appendix 7 1.1 Standards for Residential Developments / Apartments

Waste storage issues should be considered at the initial design and pre planning stage of all residential developments to ensure access for all (including people with disabilities), in a brightly lit, safe and well-signed area, spacious enough for easy manoeuvrability, with good ventilation and ready access if required for the control of potential vermin. Where storage is provided in a basement area, sufficient access and egress must be provided to enable receptacles to be moved easily from the storage area to an appropriate collection point on the public street nearby. Provision shall also be made for the storage and collection of waste materials in apartment schemes in accordance with the Sustainable Urban Housing: Design Standards for New Apartments Guidelines for Planning Authorities 2018.

The following are also requirements:

- Receptacles that are designed for reuse, with the exception of a specific area designated by a local authority as being only suitable for the collection of non-reusable receptacles such as bags, ideally of 1,100 litre capacity, must be used.
- To provide a three-bin collection system for residents in communal collection schemes, for each type of waste: general waste, dry recyclables and organic food/garden waste. A proposal on the three-bin system including bin quantity, type and frequency of collection must be submitted in writing to the Waste Regulation Unit in Dublin City Council for agreement.
- Sufficient space must be provided to accommodate the collection of dry recyclables and organic kitchen waste/ garden waste.
- Suitable wastewater drainage points should be installed in the receptacle bin storage area for cleaning and disinfecting purposes.

Appendix 7 1.2 Standards for Commercial / Industrial Developments

- Receptacles that are designed for reuse, with the exception of in specific areas designated by a local authority as being only suitable for the collection of non-reusable receptacles such as bags, ideally of 1,100 Litre capacity, must be used.
- Adequate storage space for a minimum of one No. 1,100 Litre receptacle.
- Sufficient space must be provided to accommodate the collection of dry recyclables and organic kitchen waste/ garden waste.
- Adequate space and height for a standard refuse collection vehicle (RCV) to access site.
- Sufficient access and egress must be provided to enable receptacles to be moved easily from the storage area to an appropriate collection point on the public street nearby.
- Receptacle storage areas must not be on a public street nor be visible or accessible from there.
- The receptacle storage areas should be designed so that each bin within the storage area is accessible to occupants/ employees of the development (including people with disabilities).
- Suitable wastewater drainage points should be installed in the bin storage area for cleaning and disinfecting purposes.
- Waste storage areas should not present any safety risks to users and should be well-lit.
- Adequate ventilation of waste storage areas so as to minimise odours and potential nuisance from vermin/flies.

Section 3.0 below defines how the management of domestic wastes including 3 - bin waste systems for the segregation of waste at source together with the communal waste storage areas have been designed with regard to *Section's 4.8 and 4.9 Refuse Storage* of *The Department of Housing, Planning and Local Government – Sustainable Urban Housing : Design Standards for New Apartments – Guidelines for Planning Authorities. 2018 which is reproduced below.*

Refuse Storage

4.8 Provision shall be made for the storage and collection of waste materials in apartment schemes. Refuse facilities shall be accessible to each apartment stair/ lift core and designed with regard to the projected level of waste generation and types and quantities of receptacles required. Within apartments, there should be adequate provision for the temporary storage of segregated materials prior to deposition in communal waste storage and in-sink macerators are discouraged as they place a burden on drainage systems.

4.9 The following general design considerations should be taken into account in the provision of refuse storage facilities:

- Sufficient communal storage area to satisfy the three-bin system for the collection of mixed dry recyclables, organic waste and residual waste;
- In larger apartment schemes, consideration should also be given to the provision of separate collection facilities for other recyclables such as glass and plastics;
- Waste storage areas must be adequately ventilated so as to minimise odours and potential nuisance from vermin/flies and taking account the avoidance of nuisance for habitable rooms nearby;
- Provision in the layout for sufficient access for waste collectors, proximity of, or ease of access to, waste storage areas from individual apartments, including access by disabled people;
- Waste storage areas should not present any safety risks to users and should be well-lit;
- Waste storage areas should not be on the public street, and should not be visible to or accessible by the general public. Appropriate visual screening should be provided, particularly in the vicinity of apartment buildings;
- Waste storage areas in basement car parks should be avoided where possible, but where provided, must ensure adequate manoeuvring space for collection vehicles;
- The capacity for washing down waste storage areas, with wastewater discharging to the sewer.

Ref. Section's 4.8 and 4.9 Refuse Storage of *The Department of Housing, Planning and Local Government – Sustainable Urban Housing : Design Standards for New Apartments – Guidelines for Planning Authorities. 2018.*

The OWMP has also been prepared with regard to *British Standard BS 5906:2005 Waste Management in Buildings-Code of Practice* which provides guidance on methods of storage, collection, segregation for recycling and recovery for residential building.

Key Aspects to achieve Waste Targets

- All residential apartment units shall be provided with information on the segregation of waste at source and how to reduce the generation of waste by the Facilities Management Company.

- All units shall have sufficient space for the storage of a 3-bin waste system within the kitchen areas to facilitate the segregation of waste at source.

- All waste handling and storage activities shall occur in the dedicated communal apartment waste storage areas.

- The development's Facility Management Company shall appoint a dedicated Waste Services Manager to ensure that waste is correctly and efficiently managed throughout the development.

- The Operational Phase of the Waste Management Plan is defined by the following stages of waste management for both the residential and commercial aspects of the development:

  Stage 1 Occupier Source Segregation
  Stage 2 Occupier Deposit and Storage
  Stage 3 Bulk Storage and On-Site Management
  Stage 4 On-site treatment and Off-Site Removal
  Stage 5 End Destination of wastes

The operational phase of the WMP has been prepared with regard to *British Standard BS 5906:2005 Waste Management in Buildings-Code of Practice* which provides guidance on methods of storage, collection, segregation for recycling and recovery for residential building and with consideration of Dublin City Council's domestic waste reduction and segregation at source requirements.

3.0 RESIDENTIAL UNITS DOMESTIC WASTE MANAGEMENT

The Facilities Management Company shall be responsible for the implementation of all aspects of the Domestic Waste Management Plan which are detailed as follows.

The Facilities Management Company shall employ an appropriately qualified and experienced staff member who will be responsible for all aspects of waste management at the development.

All accommodation units shall be provided with a Waste Management Information document, prepared by the Facilities Management Company, which shall clearly state the methods of source waste segregation, storage, and recycling initiatives that shall apply to the Management of the development. This Information document shall be issued to all residential units on an annual basis.

Residential Units
The design of all residential units shall provide sufficient internal kitchen space for the storage of up to 10kg of general domestic waste, green recyclable waste and organic waste. Each apartment / unit shall include waste storage bins which will be of such a size that will allow their easy manual handling to be brought to the communal waste storage areas.

It shall be the responsibility of the Facilities Management Company to ensure that appropriate signage is provided in each apartment lobby/entrance hall notifying apartment residents of their obligations to recycle domestic waste items in accordance with the requirements of the contracted Waste Collection contractor and to inform residents of the location of the closest civic amenity centres and bring- banks (Grangegorman and Collins Avenue) and the nature of waste material that can be accepted.

It shall be the responsibility of the Facilities Management Company to ensure that all domestic waste generated by apartment residents is managed to ensure correct storage prior to collection by an appropriately waste permitted waste collection company on a weekly basis.

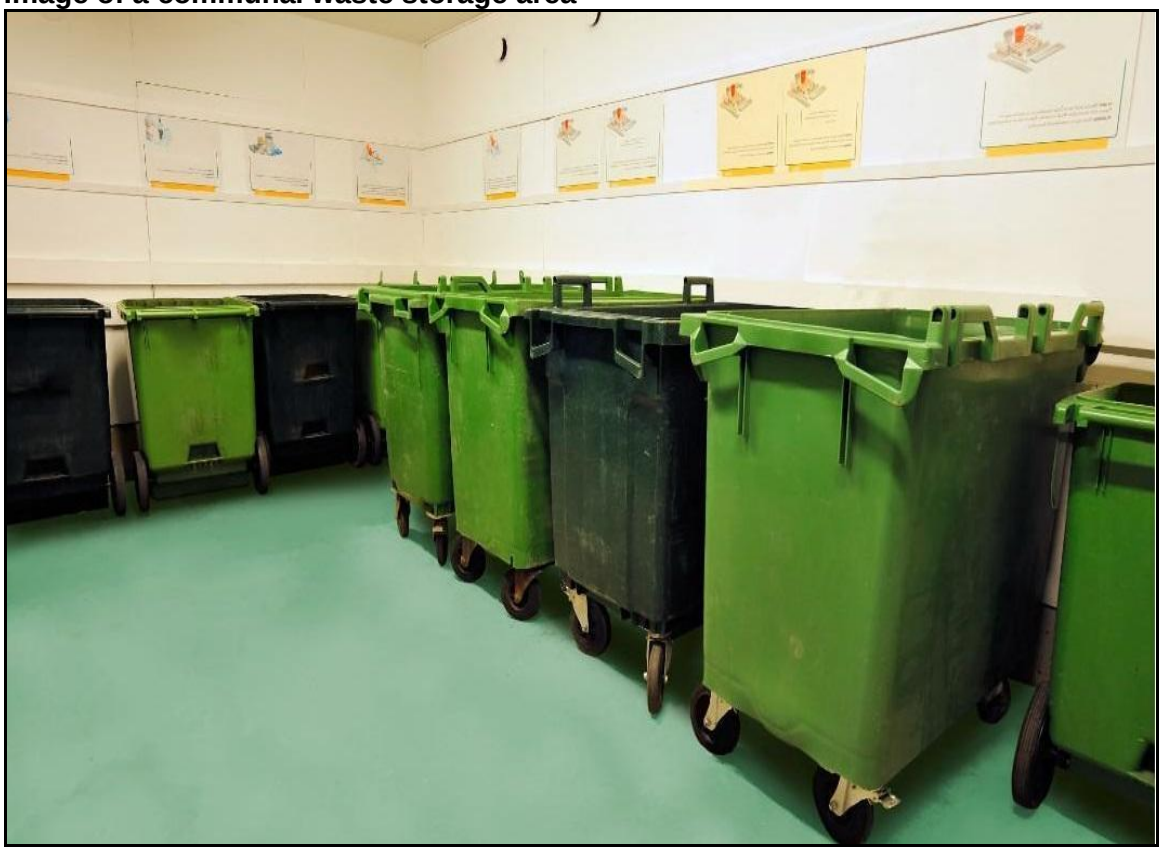
Image of typical domestic kitchen 3 bin waste systems

Apartments - Common Waste Storage Areas
The residential apartment blocks shall be served by communal waste storage areas at ground level and shall include clearly visible guidelines on the appropriate segregation of different waste types.

Signage to inform residents indicating the location of the local Recycling Centres and the nature of waste materials that can be brought and deposited there.

Signage to inform residents of their obligations to reduce waste, segregate waste within the home and dispose of waste in the correct bin will be clearly posted within the waste storage area.

All waste storage bins shall be clearly labelled with exactly what type of waste materials may be deposited within them.
The communal waste storage areas shall be designed to include the following aspects:



- A defined pedestrian route shall be marked from the apartment buildings to the waste storage area.
- A non-slip surface shall be provided within the waste storage area.
- The waste storage area shall be located in a delineated area adjacent the apartment building.
- The waste storage shall be passively ventilated.
- The waste storage area shall be fitted with sensor lighting.
- The waste storage area shall be fitted with CCTV cameras and associated signage.
- The waste storage area shall be designed to provide safe access from the apartment units by mobility impaired persons.
- A dedicated and clearly labelled area shall be provided in which mobility impaired persons may place wastes into receptacles at a lower level which will be subsequently transferred to the bulk storage bins on a daily basis by the Facilities Management Company.
- The waste storage area shall include ground drainage to allow for its regular cleaning and disinfection.
- The Facilities Management Company shall engage a mobile bin cleaning service provider to clean waste bins on a monthly basis.
- Sufficient domestic waste storage areas shall be provided throughout the development.
- Each communal waste storage area shall contain brown organic waste bulk bins. Appropriate signage shall be placed on all brown bins informing residents of the exact nature of organic waste that can be placed in the bin. Signage will also state that all organic waste must be placed within biodegradable bags before placing in the bulk bin.
- Each communal waste storage area shall contain a biodegradable waste bag dispenser which will facilitate and encourage residents of apartments and duplexes to separately segregate food and organic waste within their apartments in a dedicated bin.
- A waste battery box shall be provided in each bin store area which shall be periodically emptied by the Facility Management Company at a facility that accepts waste batteries.

The Facilities Management Company shall conduct at least weekly inspections of the waste storage areas and shall sign a weekly check list which shall be displayed within the area.

The Facilities Management Company shall ensure that an adequate supply of biodegradable organic waste bags are in place at all times.

It shall be the responsibility of the Facilities Management Company to maintain and ensure the cleanliness of all waste storage areas to prevent odours and the attraction of vermin.

Image of a communal waste storage area

A battery box and a WEEE Bin shall also be provided in the communal waste storage areas, an example of which is shown in the following image. This shall be managed by a specialist waste contractor who will be responsible for its routine collection.

Waste Collection Contractor
The Facilities Management Company shall appoint a Waste Collection contractor capable of collecting Grey (mixed waste bins), Green (dry recyclable bins) and Brown (organic waste bins) from the waste storage areas on a weekly basis. The name of the waste collection contractor once appointed shall be forwarded to the Environment Department of Dublin City Council.

Waste Management & Record Keeping
The Facilities Management Company shall maintain a weekly register detailing the quantities and breakdown of general mixed domestic waste, recyclable waste and organic waste wastes removed from the development. Supporting documentation shall be provided by the Waste Collection Contractor on a monthly basis. This will allow for waste recycling targets to be tracked to achieve the 50% recycling target.

The Facilities Management Company shall prepare an annual information report for all residential units detailing the quantities and waste types generated by the development for the previous year. The report shall include reminder information on the correct segregation at source procedures and the correct placement of wastes in the waste storage area. Other aspects of ongoing waste management continuous improvement shall also be stated. This annual report shall also be submitted to Dublin City Council's Environment Department.

Annual Bulky Waste Collections
The Facilities Management Company shall provide a bulky waste collection and transport service to the closest recycling centres on an annual basis which will allow residents to have bulky items such as appliances and furniture removed from their houses and apartments and transported to a licenced facility. This initiative will also reduce the potential for illegal waste collections and fly-tipping in the local area.

4.0 WASTE MANAGEMENT DUTIES OF THE FACILITY MANAGEMENT COMPANY

The Facilities Management Company shall be responsible for the implementation of all aspects of the Domestic and Amenity Areas Waste Management Plan which are detailed as follows:

- The Facilities Management Company shall employ an appropriately qualified and experienced staff member who will be responsible for all aspects of waste management at the development.

- All accommodation units shall be provided with a Waste Management Information document, prepared by the Facilities Management Company, which shall clearly state the methods of source waste segregation, storage, and recycling initiatives that shall apply to the Management of the development. This Information document shall be issued to all residential units on an annual basis.

- It shall be the responsibility of the Facilities Management Company to ensure that appropriate signage is provided in each apartment lobby/entrance halls notifying apartment residents of their obligations to recycle domestic waste items at source.

- It shall be the responsibility of the Facilities Management Company to ensure that all domestic waste generated by apartment residents is managed to ensure correct storage prior to collection by an appropriately waste permitted waste collection company on a weekly basis.

- The Facilities Management Company shall conduct daily inspections of the waste storage areas and shall sign a daily check list which shall be displayed within the area.

- The Facilities Management Company shall ensure that an adequate supply of biodegradable organic waste bags are in place at all times.

- It shall be the responsibility of the Facilities Management Company to maintain and ensure the cleanliness of all waste storage areas to prevent odours and the attraction of vermin.

- The Facilities Management Company shall engage a specialist cleaning contractor on a regular basis to clean and sterilise all communal waste storage areas.

- The name of the waste collection contractor(s) once appointed shall be forwarded to the Environment Department of Dublin City Council.

- The Facilities Management Company shall be responsible for the maintenance of all waste bins located in the following communal spaces :

- Community Facilities
- Landscaped areas

- The Facilities management company shall manage waste generated at all communal spaces and shall similarly be segregated into grey (mixed waste), green (dry recyclable), brown (organic) and cardboard packaging waste.

5.0 WASTE MANAGEMENT IN COMMUNAL AMENITY AREAS

The communal areas of the development will include 3-bin waste segregation systems.

Colour coded and clearly labelled waste bins for recyclable materials, organic materials and non-recyclable general waste shall be installed in communal areas/rooms for easy and clear segregation by residents, an example of which is shown below.

Image of a communal space waste segregation recycling bin

6.0 WASTE MANAGEMENT AT THE CRECHE

Waste generated by the creche shall be separately managed by the operators of the creche who shall engage a commercial waste contractor to collected waste generated.

Wastes from the creche shall be stored within the curtilage of the premises and shall be segregated into grey (mixed waste), green (dry recyclable), brown (organic) and cardboard packaging waste.

7.0 WASTE MANAGEMENT AT THE RETAIL / COMMERCIAL UNITS

Waste generated by the commercial and retail units shall be managed by the operators of the units who shall engage a commercial waste contractor to collected waste generated.

Wastes from these units shall be stored within a dedicated, separate and lockable commercial waste areas within the basement bin store and shall be segregated into grey (mixed waste), green (dry recyclable), brown (organic) and cardboard packaging waste.

8.0 WASTE TYPES & QUANTITIES GENERATED

Residential Waste

The most recent *EPA National Waste Statistics Report for 2018, published 2020* on household waste generation states 600kg is produced per person per year. (Pandemic Years 2019-2020 not considered as biasedly higher as a result of higher than normal domestic consumption of goods and associated waste generation).

A value of 1.6kg of waste generated per person per day has been therefore assumed for the purposes of this report to estimate the volume of waste to be generated at the proposed fully occupied development as detailed in Table 1. Residential waste quantities in litres and m^3 have been evaluated with regard to *British Standard BS 5906:2005 Waste Management in Buildings-Code of Practice.*

Table 1 Domestic waste generation per day/week

Unit	Per Day	Per Week
Kg	19,272	134,904
Litres	9,200	64,400
m^3	9.2	64.4

Commercial Waste

Non-Residential waste quantities have been evaluated with regard to *British Standard BS 5906:2005 Waste Management in Buildings-Code of Practice* as detailed in Table 2.

Table 2 Non-Domestic waste generation per week

Unit	Litres Per Week
Supermarket	11,250
Retail Unit	4320
Cafe	1090
Creche	6878
Library / Community Hub	1000

9.0 COMMUNAL WASTE STORAGE AREA DESIGN

The development shall have 4 no. ground level communal bin storage areas.

The dimensions of standard *EN840* 1100 litre bin are:

Width (mm)	1360
Depth (mm)	1080
Height (mm)	1455
Floor Area per bin (m^2)	1.5

To allow free access to the bins and provide sufficient space for their movement, the required bin store area = bin floor area x 1.5.

Table 3 Domestic Minimum Communal Bin Store Area Requirements

Bin Store Ref	Bin Storage Area (m^2)
1	53
2	45
3	100
4	31

Table 4 Non-Domestic Minimum Bin Store Area Requirements

Unit Ref	Bin Storage Area (m^2)
T5 Retail	15
T5 Supermarket	28
T5 Cafe	8
Creche	10
Library/Community Hub	8

10.0 WASTE COLLECTION STRATEGY

All bulk waste bins shall be brought from the apartments communal bin storage areas to the designated demarcated bin collection areas within the development at road-level by the Facilities Management staff.

The development shall include 3 No. waste bin collection points as follows:

Table 5 Minimum Collection Area Requirements

Collection Point Ref	Serving Bin Store	Bin Storage Area (m^2)
1	1	9
2 & 3	2	14
4	3	14
T5 Commercial	4	20

Emptied bins shall be returned to the bin storage areas immediately following collection. Appendix I presents the site plan showing the proposed bin storage areas and the associated bin collection points.

Image of bulk bin transport from bin stores to collection point

11.0 COMMUNITY RECYCLING CENTRE

A community recycling centre shall be installed within the development to facilitate the segregation of recyclable and re-useable materials such as clothing, glass and aluminium cans and which will further assist residents in the local area to divert these waste streams away from unsegregated domestic waste.

12.0 CONCLUSIONS

The proposed Emmet Road development shall be designed and managed to provide residents with the required waste management infrastructure to minimise the generation of un-segregated domestic waste and maximise the potential for segregating and recycling domestic waste fractions.

The **Objective** of this Waste Management Plan is to maximise the quantity of waste recycled by residents by providing sufficient waste recycling infrastructure, waste reduction initiatives and waste collection and waste management information services to the residents of the development.

The **Goal** of this Waste Management Plan is to achieve the current residential recycling rate of 50% of managed municipal waste (and future targets in subsequent Regional Waste Management Plans).

Residents will be provided with waste recycling and waste disposal information by the development's Facility Management Company who will be responsible for providing clean, safe and mobility impaired accessible communal waste storage areas for the apartment block.

The development shall be designed to provide adequate domestic waste storage and segregation space for each residential unit as a 3-bin kitchen system. This will promote the appropriate segregation at source of domestic generated waste from all residential units at the development.

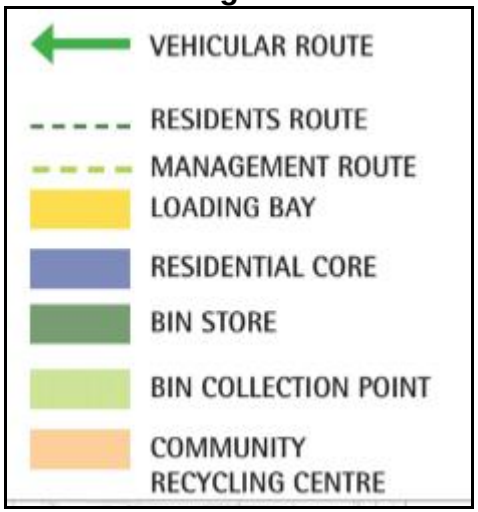
The Facility Management Company shall maintain a register of all waste volumes and types collected from the development each year including a break-down of recyclable waste and where necessary, shall introduce initiatives to further encourage residents to maximise waste segregation at source and recycling.

They shall also provide an annual bulky waste collection service for all residents.

A community recycling centre shall be located within the development.

Communal waste bin storage areas shall be designed in a manner to ensure that appropriate information and signage for the correct disposal and recycling of waste is available for residents.

All commercial aspects of the development shall utile the separate commercial waste storage areas.



The Facility Management Company shall prepare an annual report for Dublin City Council and residents of the development on the quantities of waste generated within the development to demonstrate how waste reduction and recycling targets are being achieved with regard to the targets defined in the current *The Eastern-Midlands Region Waste Management Plan*

APPENDIX E – CULTURAL HERITAGE - ARCHAEOLOGY

Appendix E1 Legislation Protecting the Archaeological Resource

Appendix E2 Impact Assessment and the Cultural Heritage Resource

Appendix E3 Mitigation Measures and the Cultural Heritage Resource

Appendix E4 Photographic Record

Appendix E5 Method Statement

Appendix E6 NIAH Description on Historic Buildings and Protected Structures

Appendix E1 Legislation Protecting the Archaeological Resource

PROTECTION OF CULTURAL HERITAGE

The cultural heritage in Ireland is safeguarded through national and international policy designed to secure the protection of the cultural heritage resource to the fullest possible extent (Department of Arts, Heritage, Gaeltacht and the Islands 1999, 35). This is undertaken in accordance with the provisions of the European Convention on the Protection of the Archaeological Heritage (Valletta Convention), ratified by Ireland in 1997.

THE ARCHAEOLOGICAL RESOURCE

The National Monuments Act 1930 to 2014 and relevant provisions of the National Cultural Institutions Act 1997 are the primary means of ensuring the satisfactory protection of archaeological remains, which includes all man-made structures of whatever form or date except buildings habitually used for ecclesiastical purposes. A National Monument is described as 'a monument or the remains of a monument the preservation of which is a matter of national importance by reason of the historical, architectural, traditional, artistic or archaeological interest attaching thereto' (National Monuments Act 1930 Section 2). A number of mechanisms under the National Monuments Act are applied to secure the protection of archaeological monuments. These include the Register of Historic Monuments, the Record of Monuments and Places, and the placing of Preservation Orders and Temporary Preservation Orders on endangered sites.

OWNERSHIP AND GUARDIANSHIP OF NATIONAL MONUMENTS

The Minister may acquire national monuments by agreement or by compulsory order. The state or local authority may assume guardianship of any national monument (other than dwellings). The owners of national monuments (other than dwellings) may also appoint the Minister or the local authority as guardian of that monument if the state or local authority agrees. Once the site is in ownership or guardianship of the state, it may not be interfered with without the written consent of the Minister.

REGISTER OF HISTORIC MONUMENTS

Section 5 of the 1987 Act requires the Minister to establish and maintain a Register of Historic Monuments. Historic monuments and archaeological areas present on the register are afforded statutory protection under the 1987 Act. Any interference with sites recorded on the register is illegal without the permission of the Minister. Two months' notice in writing is required prior to any work being undertaken on or in the vicinity of a registered monument. The register also includes sites under Preservation Orders and Temporary Preservation Orders. All registered monuments are included in the Record of Monuments and Places.

PRESERVATION ORDERS AND TEMPORARY PRESERVATION ORDERS

Sites deemed to be in danger of injury or destruction can be allocated Preservation Orders under the 1930 Act. Preservation Orders make any interference with the site illegal. Temporary Preservation Orders can be attached under the 1954 Act. These perform the same function as a Preservation Order but have a time limit of six months, after which the situation must be reviewed. Work may only be undertaken on or in the vicinity of sites under Preservation Orders with the written consent, and at the discretion, of the Minister.

RECORD OF MONUMENTS AND PLACES

Section 12(1) of the 1994 Act requires the Minister for Arts, Heritage, Gaeltacht and the Islands (now the Minister for the Department of Culture, Heritage and the Gaeltacht) to establish and maintain a record of monuments and places where the Minister believes that such monuments exist. The record comprises a list of monuments and relevant places and a map/s showing each monument and relevant place in respect of each county in the state. All sites recorded on the Record of Monuments and Places receive statutory protection under the National Monuments Act 1994. All recorded monuments on the proposed development site are represented on the accompanying maps.

Section 12(3) of the 1994 Act provides that 'where the owner or occupier (other than the Minister for Arts, Heritage, Gaeltacht and the Islands) of a monument or place included in the Record, or any other person, proposes to carry out, or to cause or permit the carrying out of, any work at or in relation to such a monument or place, he or she shall give notice in writing to the Minister of Arts, Heritage, Gaeltacht and the Islands to carry out work and shall not, except in case of urgent necessity and with the consent of the Minister, commence the work until two months after giving of notice'.

Under the National Monuments (Amendment) Act 2004, anyone who demolishes or in any way interferes with a recorded site is liable to a fine not exceeding €3,000 or imprisonment for up to 6 months. On summary conviction

and on conviction of indictment, a fine not exceeding €10,000 or imprisonment for up to 5 years is the penalty. In addition, they are liable for costs for the repair of the damage caused.

In addition to this, under the *European Communities (Environmental Impact Assessment) Regulations 1989,* Environmental Impact Statements (EIS) are required for various classes and sizes of development project to assess the impact the proposed development will have on the existing environment, which includes the cultural, archaeological and built heritage resources. These document's recommendations are typically incorporated into the conditions under which the proposed development must proceed, and thus offer an additional layer of protection for monuments which have not been listed on the RMP.

THE PLANNING AND DEVELOPMENT ACT 2000
Under planning legislation, each local authority is obliged to draw up a Development Plan setting out their aims and policies with regard to the growth of the area over a five-year period. They cover a range of issues including archaeology and built heritage, setting out their policies and objectives with regard to the protection and enhancement of both. These policies can vary from county to county. The Planning and Development Act 2000 recognises that proper planning and sustainable development includes the protection of the archaeological heritage. Conditions relating to archaeology may be attached to individual planning permissions.

Dublin City Council Development Plan 2016-2022

It is the policy of Dublin City Council

CHC9: To protect and preserve National Monuments.

To protect archaeological material in situ by ensuring that only minimal impact on archaeological layers is allowed, by way of the re-use of buildings, light buildings, foundation design or the omission of basements in the Zones of Archaeological Interest.

That where preservation in situ is not feasible, sites of archaeological interest shall be subject to 'preservation by record' according to best practice in advance of re-development.

That sites within Zones of Archaeological Interest will be subject to consultation with the City Archaeologist and archaeological assessment prior to a planning application being lodged.

That the National Monuments Service will be consulted in assessing proposals for development which relate to Monuments and Zones of Archaeological Interest.

To preserve known burial grounds and disused historic graveyards, where appropriate, to ensure that human remain are re-interred, except where otherwise agreed with the National Museum of Ireland.

That in evaluating proposals for development in the vicinity of the surviving sections of the city wall that due recognition be given to their national significance and their special character.

To have regard to the Shipwreck inventory maintained by the DAHG. Proposed developments that may have potential to impact on riverine, inter-tidal and sub-tidal environments shall be subject to an underwater archaeological assessment in advance of works.

To have regard to DAHG policy documents and guidelines relating to archaeology.

It is an Objective of Dublin City Council:

CHCO10:
To implement the archaeological actions of the Dublin City Heritage Plan 2002-6 in light of the Dublin City Heritage Plan Review 2012.

To prepare and implement conservation plans for National Monuments and Monuments in DCC care (City Walls, St Luke's Church, St James's Graveyard, St. Thomas's Abbey, St Canice's Graveyard etc).

To maintain, develop and promote the Dublin City Archaeological Archive (DCAA) at Pearse Street Library and Archives.

To ensure the public dissemination of the findings of licensed archaeological activity in Dublin through the Dublin County Archaeology GIS.

To develop a long-term management plan to promote the conservation, management and interpretation of archaeological sites and monuments and to identify areas for strategic research.

To have regard to the city's industrial heritage and Dublin City Industrial Heritage Record (DCIHR) in the preparation of Local Area Plans (LAPs) and the assessment of planning applications and to publish the DCIHR online. To review the DCIHR in accordance with Ministerial recommendations arising from the national Inventory of Architectural Heritage (NIAH) survey of Dublin City and in accordance with the Strategic Approach set out in Section 11.1.4 of this Chapter

To promote awareness of, and access to, the city's archaeological inheritance and foster high-quality public archaeology.

To promote archaeological best practice in Dublin city.

To promote the awareness of the international significance of Viking Dublin and to support post-excavation research into the Wood Quay excavations 1962-81.

To develop a strategy for the former Civic Museum collection and for other collections of civic interest and importance.

To investigate the potential for the erection of Columbarium Walls.

To support the implementation of the Kilmainham Mill Conservation Plan.

Dublin City Council will seek to work with Diageo to undertake a more comprehensive industrial heritage survey of the constituent historic buildings within the Guinness Brewery complex at Saint James's Gate.

To implement and promote The Dublin Principles (ICOMOS 2011) as guiding principles to assist in the documentation, protection, conservation and appreciation of industrial heritage as part of the heritage of Dublin and Ireland.

To continue to implement actions of the Saint Luke's Conservation Plan on the basis of funds available to conserve the monument, recover the graveyard, provide visitor access, improve visual amenity and secure an appropriate new use.

Draft Dublin City Development Plan 2016-2022

It is the policy of Dublin City Council:

BHA26:

Archaeological Heritage

To protect and preserve Sites and Zones of Archaeological interest which have been identified in the Record of Monuments and Places and the Historic Environment Viewer (www.archaeology.ie).

2To protect archaeological material in situ by ensuring that only minimal impact on archaeological layers is allowed, by way of re-use of standing buildings, the construction of light buildings, low impact foundation design, or the omission of basements (except in exceptional circumstances) in the Zones of Archaeological Interest.

To seek the preservation in situ (or where this is not possible or appropriate, as a minimum, preservation by record) of all archaeological monuments included in the Record of Monuments and Places, and of previously unknown sites, features and objects of archaeological interest that become revealed through development activity. In respect of decision making on development proposals affecting sites listed in the Record of Monuments and Places, the Council will have regard to the advice and/or recommendations of the Department of Housing, Heritage and Local Government.

Development proposals within Sites and Zones of Archaeological Interest, of sites over 0.5 hectares size and of sites listed in the Dublin City Industrial Heritage Record, will be subject to consultation with the City Archaeologist and archaeological assessment prior to a planning application being lodged.

To preserve known burial grounds and disused historic graveyards. Where disturbance of ancient or historic human remains is unavoidable, they will be excavated according to best archaeological practice and reburied or permanently curated.

Preserve the character, setting and amenity of upstanding and below ground town wall defences.

Development proposals in marine, lacustrine and riverine environments and areas of reclaimed land shall have regard to the Shipwreck Inventory maintained by the Department of Culture, Heritage and the Gaeltacht and be subject to an appropriate level of archaeological assessment.

To have regard to national policy documents and guidelines relating to archaeology and to best practice guidance published by the Heritage Council, the Institute of Archaeologists of Ireland and Transport Infrastructure Ireland

Appendix E2 Impact Assessment and the Cultural Heritage Resource

POTENTIAL IMPACTS ON ARCHAEOLOGICAL AND HISTORICAL REMAINS

Impacts are defined as 'the degree of change in an environment resulting from a development' (Environmental Protection Agency 2017). They are described as profound, significant or slight impacts on archaeological remains. They may be negative, positive or neutral, direct, indirect or cumulative, temporary or permanent.

Impacts can be identified from detailed information about a project, the nature of the area affected, and the range of archaeological and historical resources potentially affected. Development can affect the archaeological and historical resource of a given landscape in a number of ways.

Permanent and temporary land-take, associated structures, landscape mounding, and their construction may result in damage to or loss of archaeological remains and deposits, or physical loss to the setting of historic monuments and to the physical coherence of the landscape.

Archaeological sites can be affected adversely in a number of ways: disturbance by excavation, topsoil stripping and the passage of heavy machinery; disturbance by vehicles working in unsuitable conditions; or burial of sites, limiting accessibility for future archaeological investigation.

Hydrological changes in groundwater or surface water levels can result from construction activities such as de-watering and spoil disposal, or longer-term changes in drainage patterns. These may desiccate archaeological remains and associated deposits.

Visual impacts on the historic landscape sometimes arise from construction traffic and facilities, built earthworks and structures, landscape mounding and planting, noise, fences and associated works. These features can impinge directly on historic monuments and historic landscape elements as well as their visual amenity value.

Landscape measures such as tree planting can damage sub-surface archaeological features, due to topsoil stripping and through the root action of trees and shrubs as they grow.

Ground consolidation by construction activities or the weight of permanent embankments can cause damage to buried archaeological remains, especially in colluviums or peat deposits.

Disruption due to construction also offers in general the potential for adversely affecting archaeological remains. This can include machinery, site offices, and service trenches.

Although not widely appreciated, positive impacts can accrue from developments. These can include positive resource management policies, improved maintenance and access to archaeological monuments, and the increased level of knowledge of a site or historic landscape as a result of archaeological assessment and fieldwork.

PREDICTED IMPACTS

The severity of a given level of land-take or visual intrusion varies with the type of monument, site or landscape features and its existing environment. Severity of impact can be judged taking the following into account:

The proportion of the feature affected and how far physical characteristics fundamental to the understanding of the feature would be lost;

Consideration of the type, date, survival/condition, fragility/vulnerability, rarity, potential and amenity value of the feature affected;

Assessment of the levels of noise, visual and hydrological impacts, either in general or site-specific terms, as may be provided by other specialists.

Appendix E3 Mitigation Measures and the Cultural Heritage Resource

POTENTIAL MITIGATION STRATEGIES FOR CULTURAL HERITAGE REMAINS

Mitigation is defined as features of the design or other measures of the proposed development that can be adopted to avoid, prevent, reduce or offset negative effects.

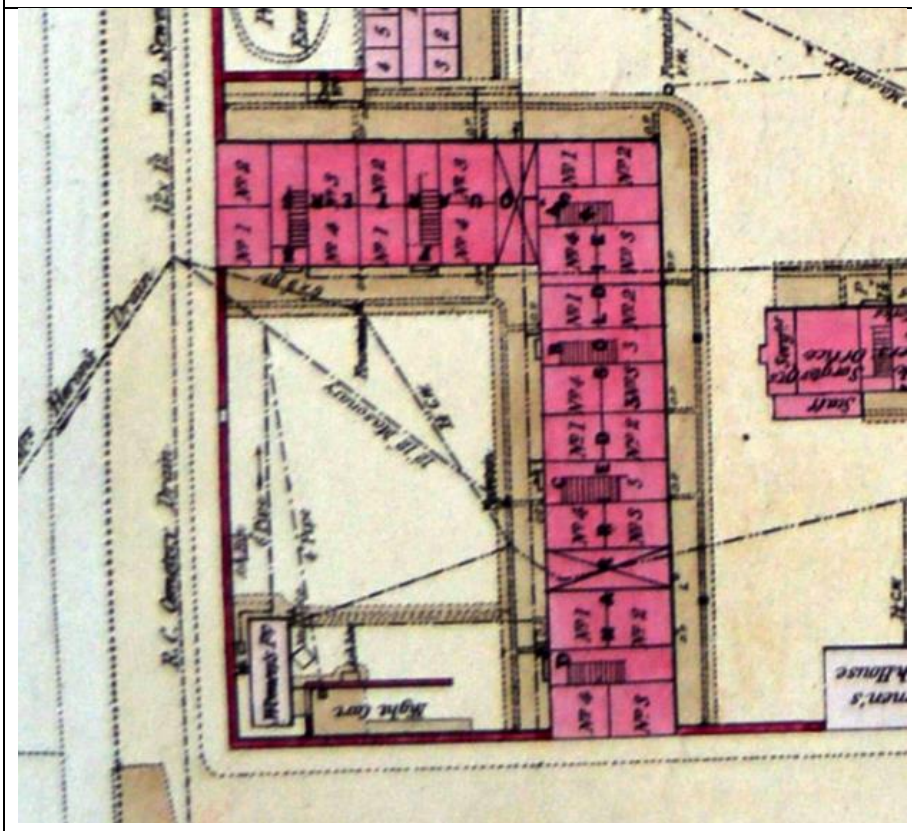
The best opportunities for avoiding damage to archaeological remains or intrusion on their setting and amenity arise when the site options for the development are being considered. Damage to the archaeological resource immediately adjacent to developments may be prevented by the selection of appropriate construction methods. Reducing adverse effects can be achieved by good design, for example by screening historic buildings or upstanding archaeological monuments or by burying archaeological sites undisturbed rather than destroying them. Offsetting adverse effects is probably best illustrated by the full investigation and recording of archaeological sites that cannot be preserved in situ.

DEFINITION OF MITIGATION STRATEGIES

ARCHAEOLOGICAL RESOURCE

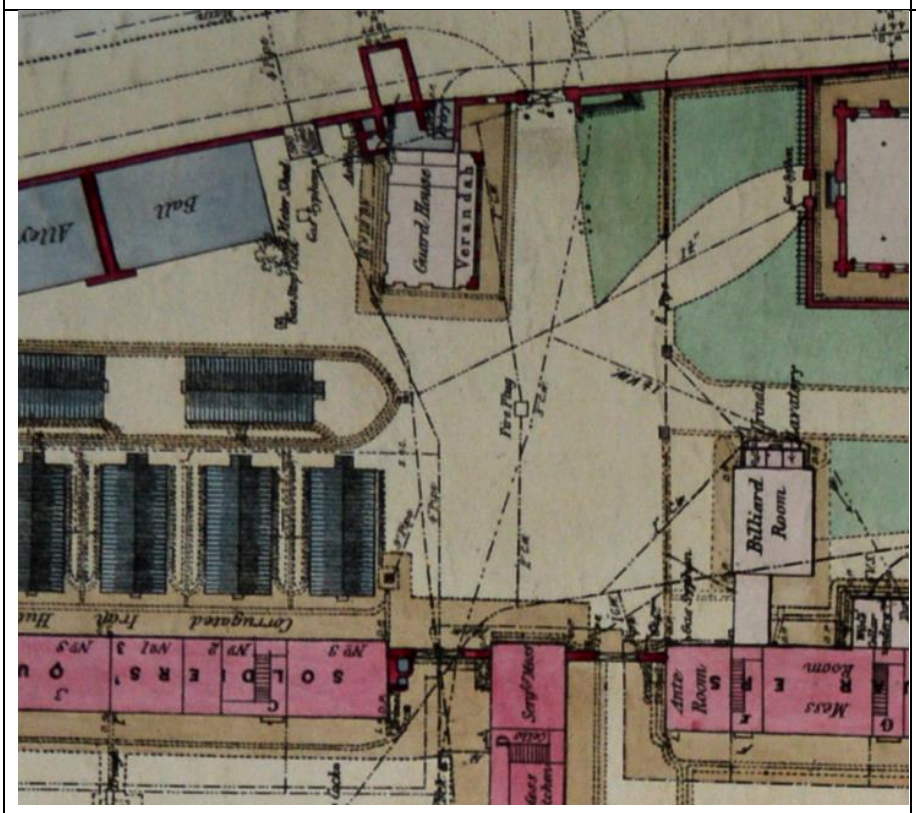
The ideal mitigation for all archaeological sites is preservation in situ. This is not always a practical solution, however. Therefore, a series of recommendations are offered to provide ameliorative measures where avoidance and preservation in situ are not possible.

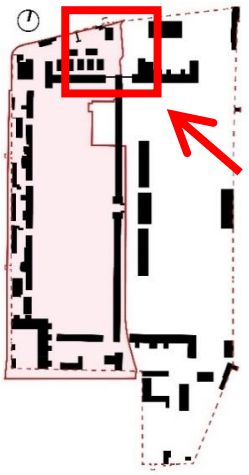
Archaeological Test Trenching can be defined as 'a limited programme of intrusive fieldwork which determines the presence or absence of archaeological features, structures, deposits, artefacts or ecofacts within a specified area or site on land, inter-tidal zone or underwater. If such archaeological remains are present field evaluation defines their character, extent, quality and preservation, and enables an assessment of their worth in a local, regional, national or international context as appropriate' (CIfA 2020a).



Full Archaeological Excavation can be defined as 'a programme of controlled, intrusive fieldwork with defined research objectives which examines, records and interprets archaeological deposits, features and structures and, as appropriate, retrieves artefacts, ecofacts and other remains within a specified area or site on land, inter-tidal zone or underwater. The records made and objects gathered during fieldwork are studied and the results of that study published in detail appropriate to the project design' (CIfA 2020b).

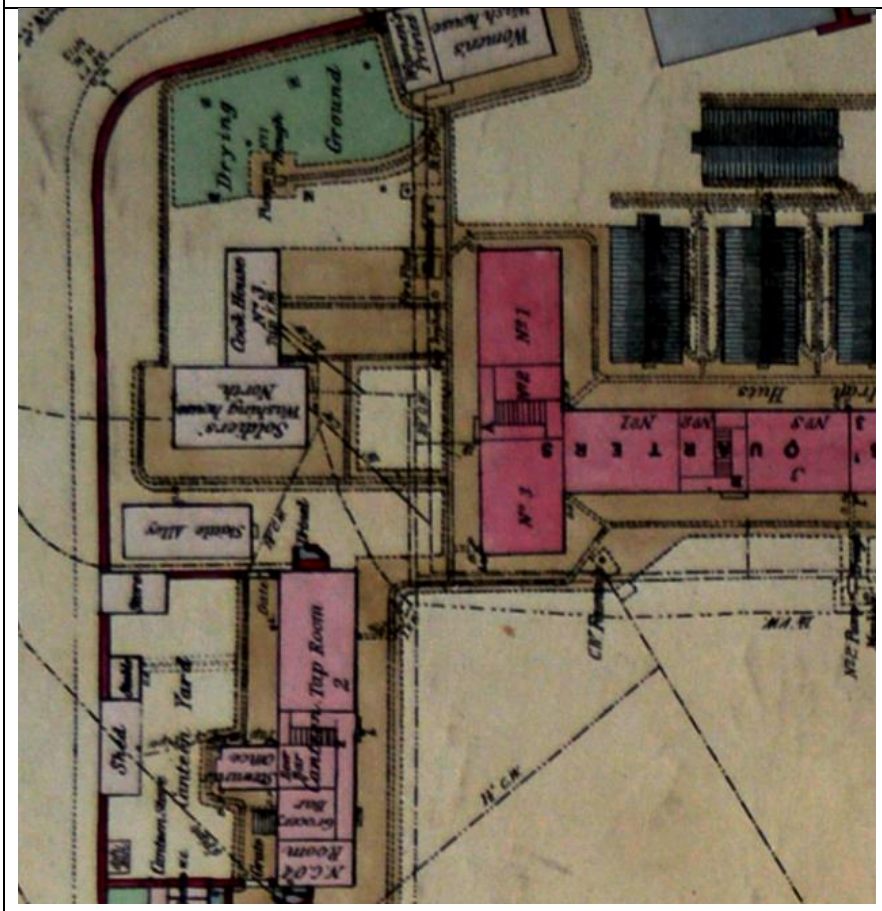
Archaeological Monitoring can be defined as 'a formal programme of observation and investigation conducted during any operation carried out for non-archaeological reasons. This will be within a specified area or site on land, inter-tidal zone or underwater, where there is a possibility that archaeological deposits may be disturbed or destroyed. The programme will result in the preparation of a report and ordered archive (CIfA 2020c).

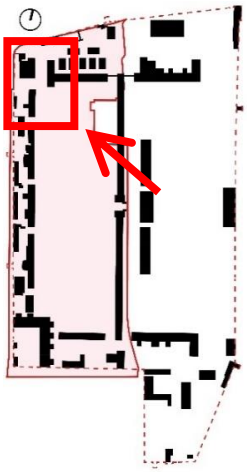




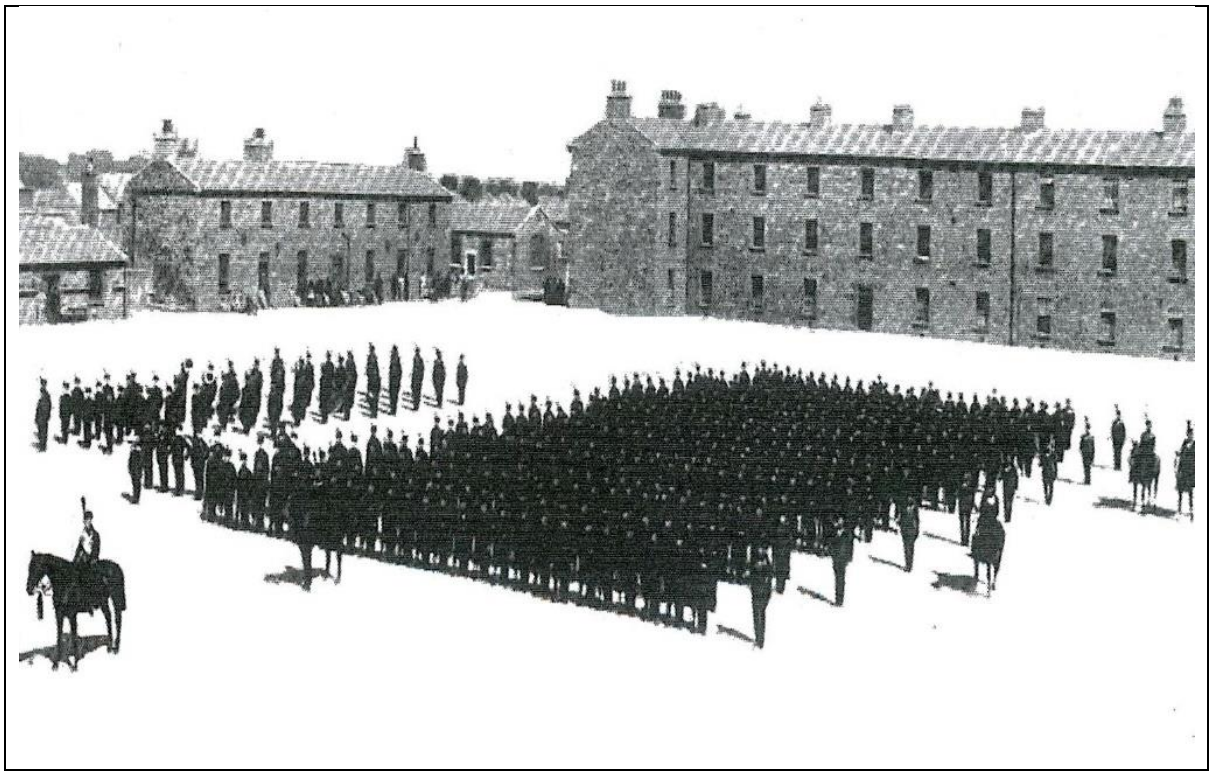
Underwater Archaeological Assessment consists of a programme of works carried out by a specialist underwater archaeologist, which can involve wade surveys, metal detection surveys and the excavation of test pits within the sea or riverbed. These assessments are able to access and assess the potential of an underwater environment to a much higher degree than terrestrial based assessments.

Appendix E4 Historic Photographic Record

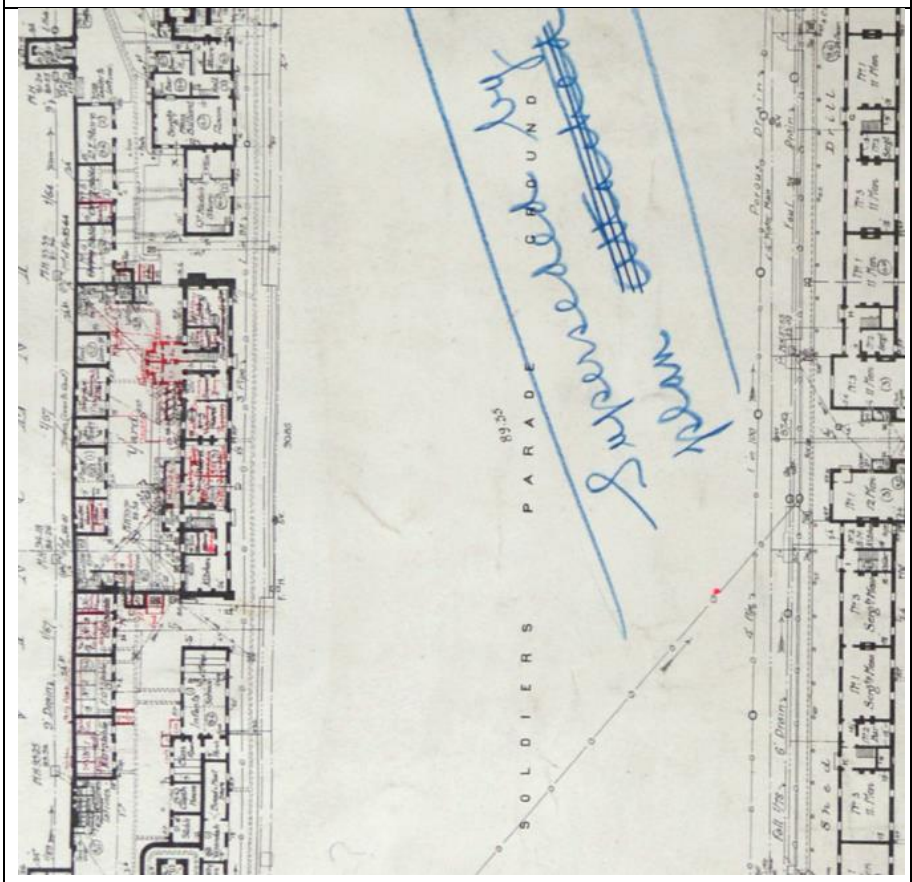


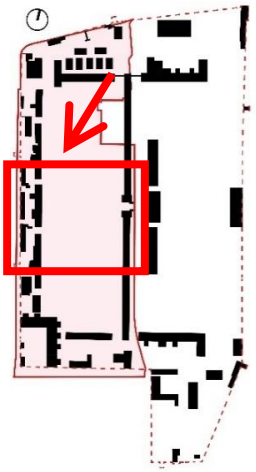


Historic photographic record

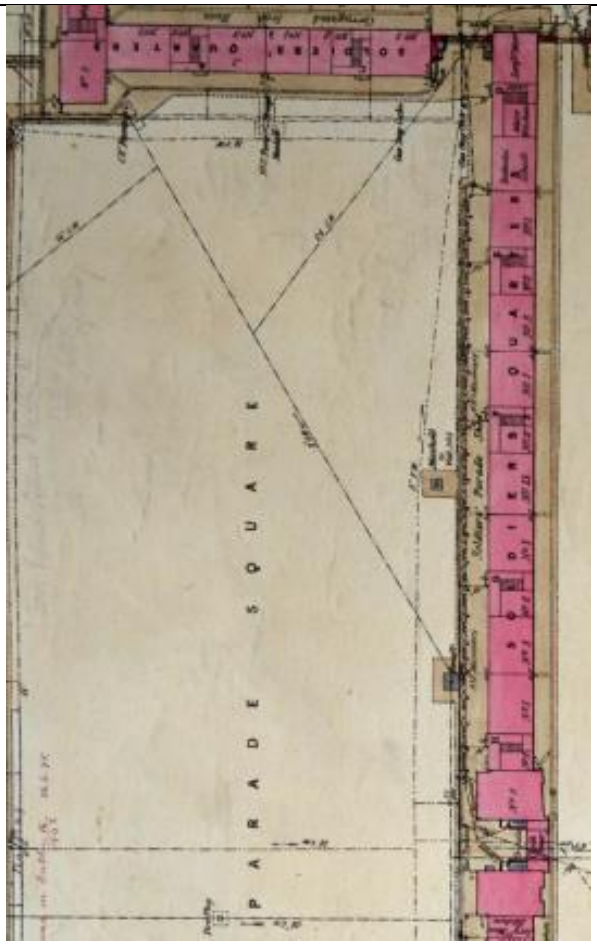


Married Soldiers Quarters	
	 The married quarters were located in the Southwest Corner of the site. Fronting onto their own courtyard which had a small pedestrian gate through the Barracks boundary wall.

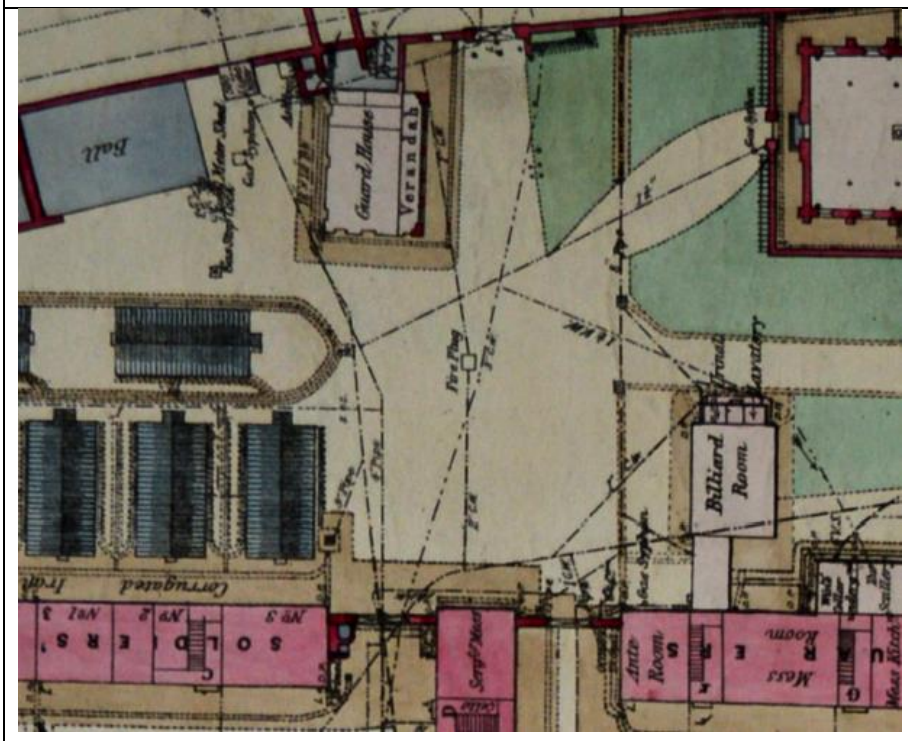




Guard House and Ball Alley	
	 Near the main entrance a cut-stone Guard House was located with a veranda to the elevation facing the gate. The corrugated iron huts appear to have been slated and look like permanent structures.

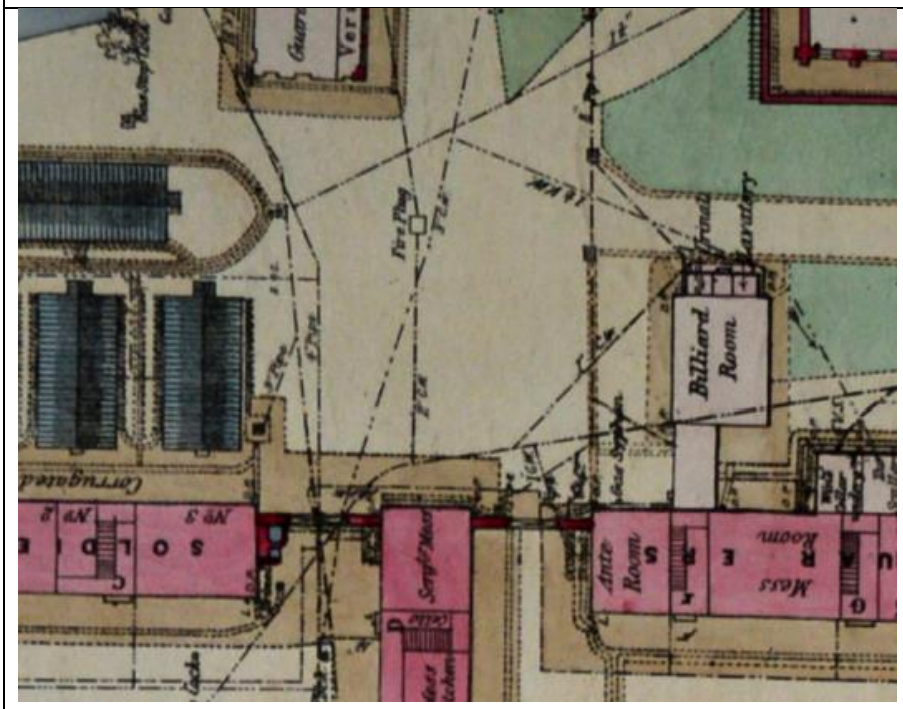


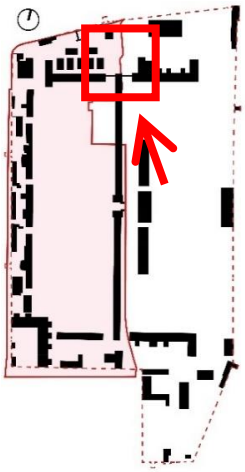
Canteen and Tap Room	
	 The North West of the site contained several utility buildings including a soldiers washing house, Canteen, Cook House, Drying Ground, Womens Washouse, Womens Privies, Canteen Yard, Grocery Bar and a skittle alley.



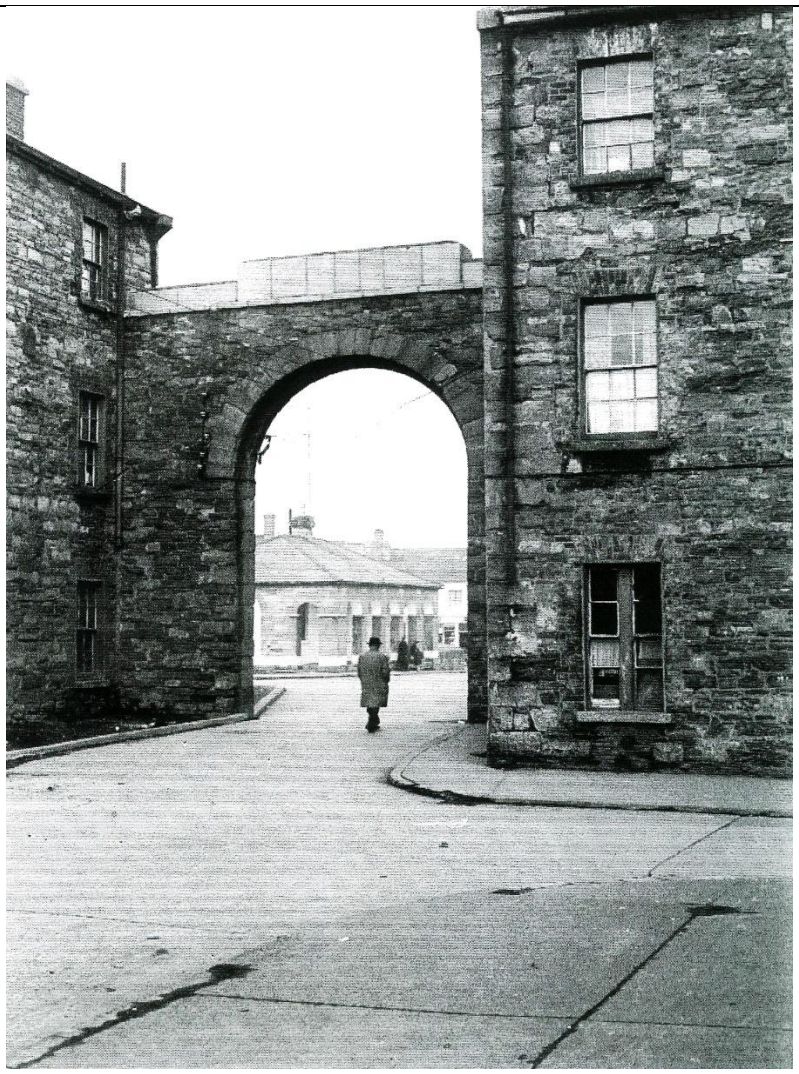
Soldiers Parade Ground	
	 Here we see a view of Soldiers Parade Ground with the hospital in the centre. The buildings on the right were later demolished and replaced with a kitchen and Cavalry Sergeants mess.

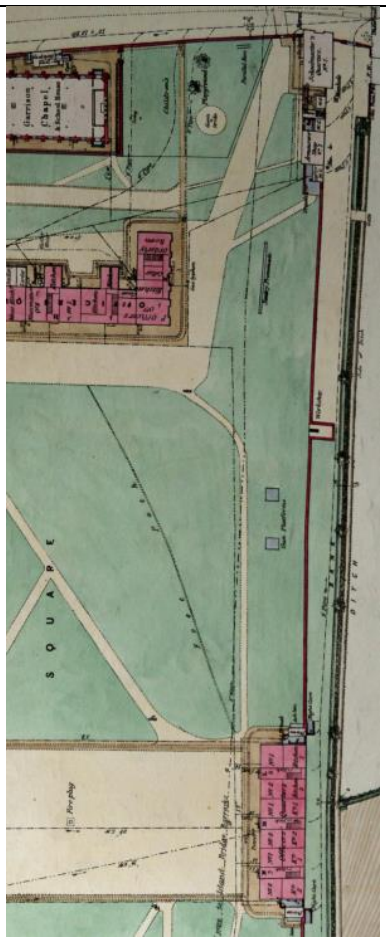
Parade Square	
	 View looking North towards the main entrance. Bell tower visible on right.



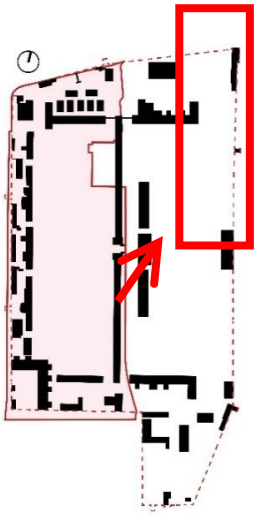


Guard House



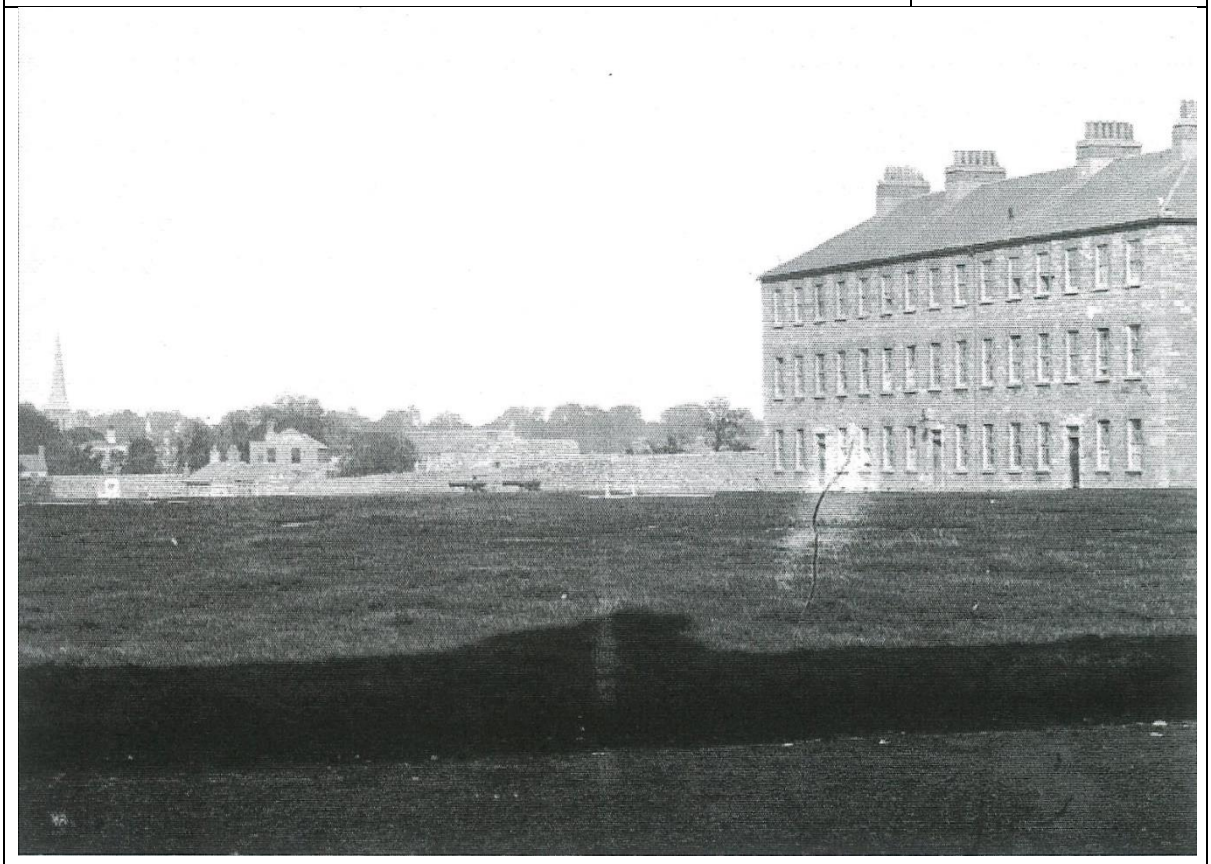


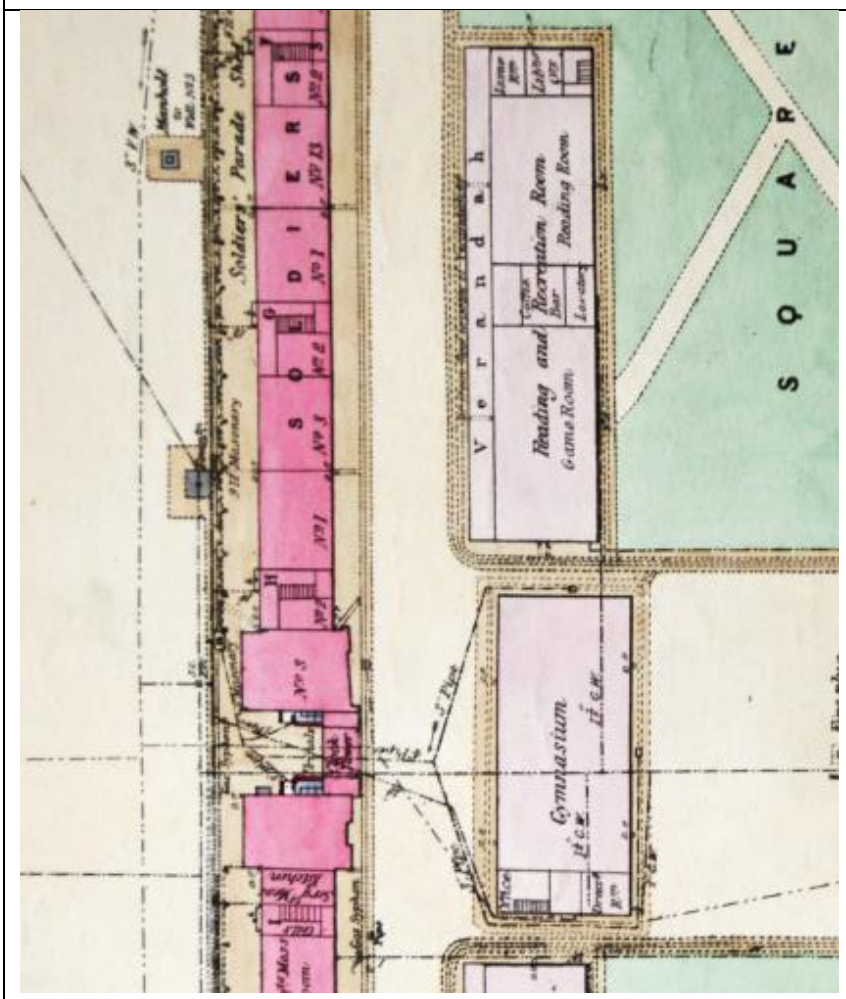
Another view of guardhouse. Main entrance arch visible on right.

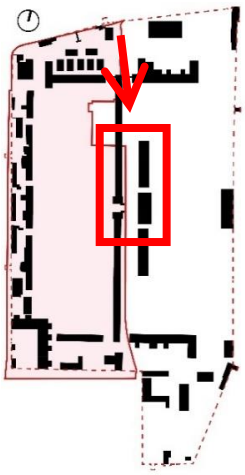


37

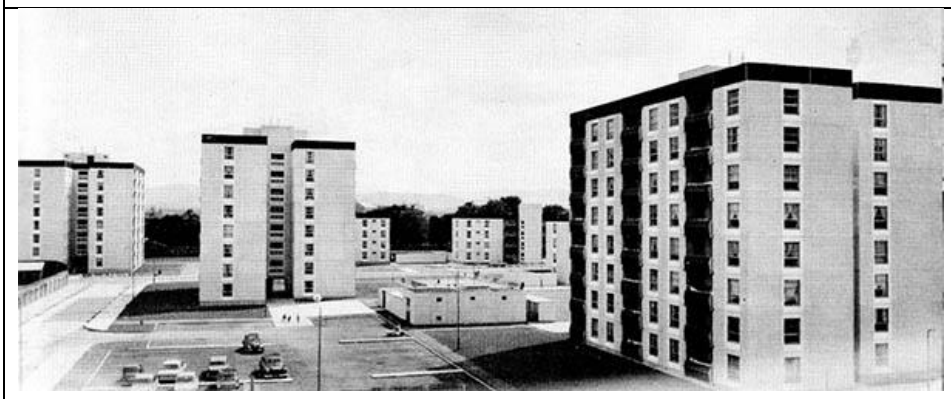
Hospital and Billiard Room	
	 View through entrance to Officers Square with Guard House in background.



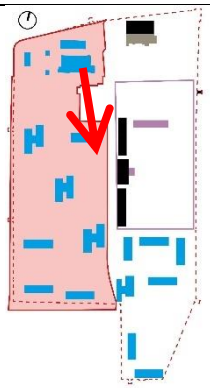


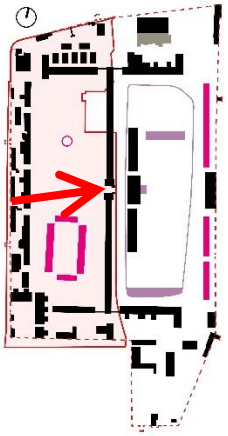


Officers Quarters	



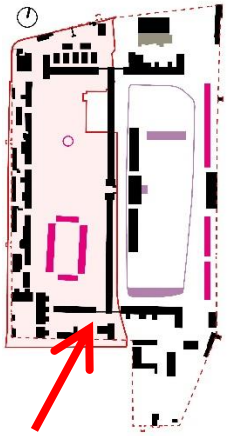
View of Officers Quarters, with St Judes Spire in background.





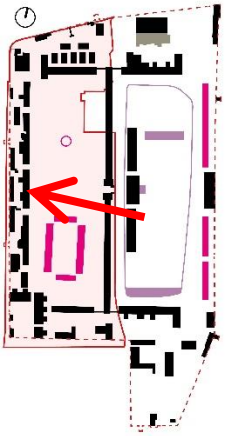
Gymnasium	
	 View looking south towards gymnasium. Verandah is visible on front elevation of Reading and recreation room.

St Michaels Estate

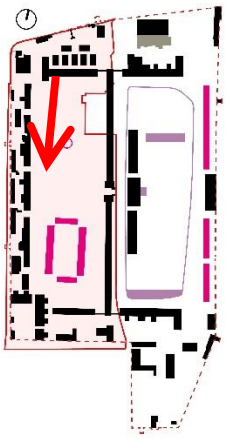


The Clocktower	
	
Looking at the clocktower, Keogh Square on the Right out of shot	

Southern End of Barracks



Rear Entrance (mid C20th)



Married Quarters

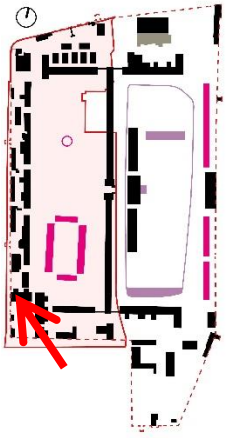
Married Quarters and Converted Barracks Buildings as part of Keogh Square

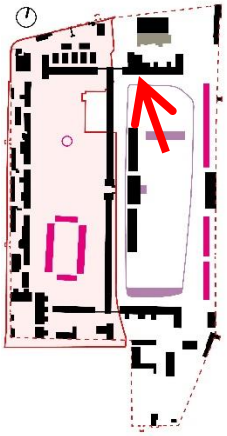
Hospital Building	
	
Hospital (mid C20th)	

Keogh Square	
	

Keogh Square Cottages on left, hospital on right with Married Quarters in distance

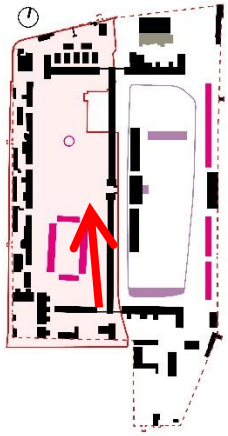
Northern Archway





Entrance Arch Being Dismantled

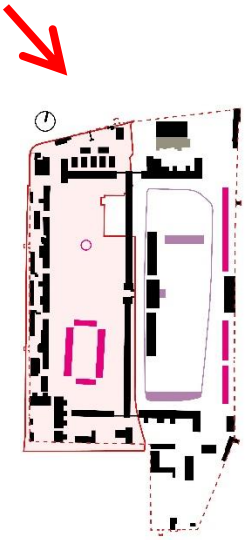
Keogh Square



Keogh Square with Hospital and recently built Tyrone Place

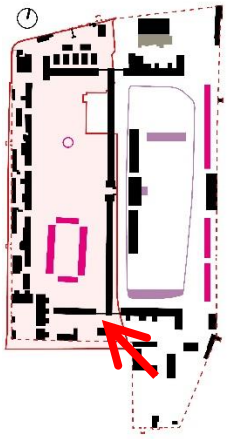
Northern end of Officers Quarters	
	
Converted Officers Quarters building with wall of school grounds on left and new cottages on right.	

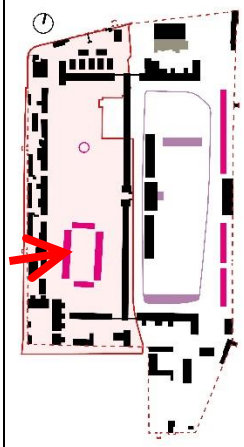
Mid-section of Soldiers Quarters	



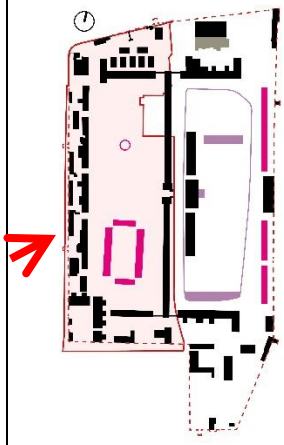
Gymnasium and Recreation halls on right, with partly demolished Soldiers Quarters on left.

Northern end of Soldiers Quarters

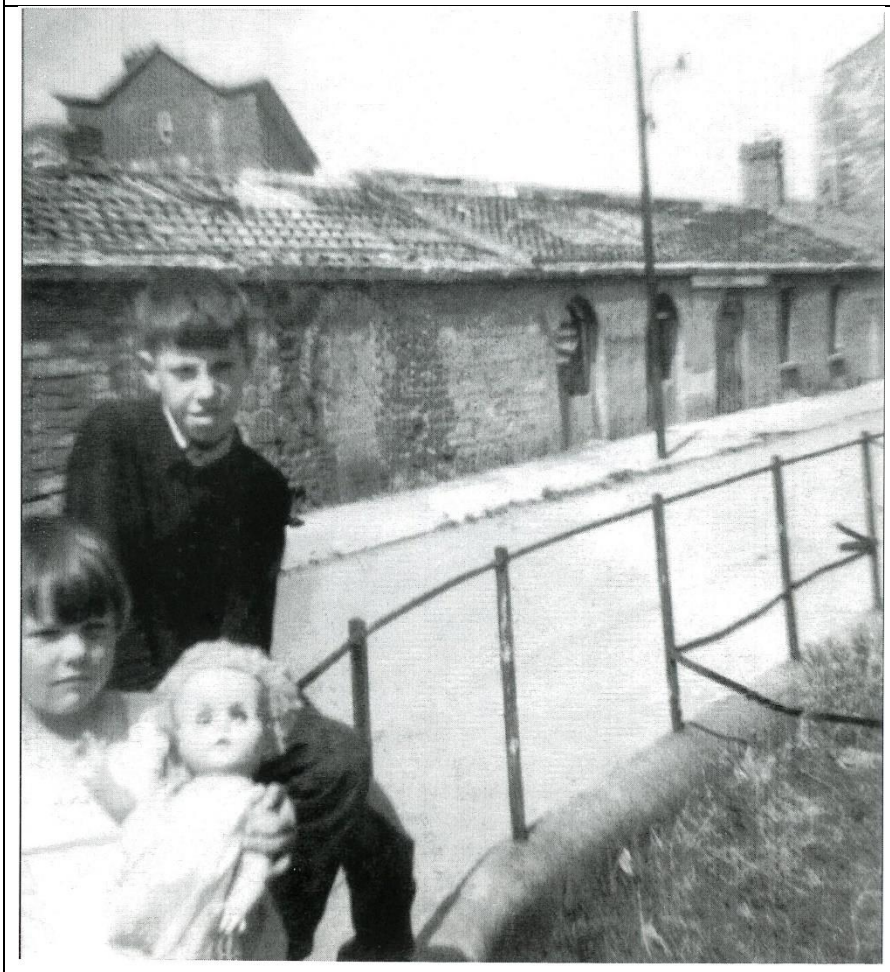


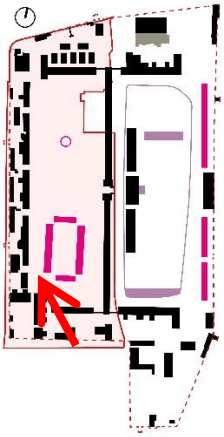


Church and Guard House on right, with a large number of Northern Barracks Buildings demolished and the central spine of Soldiers Quarters remaining



Southern end of Soldiers and Officers Quarters





Rear arched entrances to Officers Square

Keogh Square	
	
Keogh Square in foreground, with Gymnasium (school) visible in background. The clocktower has been demolished.	

Hospital Building	
	
Hospital on left with converted barracks buildings on right.	

Keogh Square	
	
Railings of Keogh square gardens in foreground and ruined former Barracks buildings in background.	

Appendix E5 Method Statement

Part Six
Outline Methodologies

6.1 Method Statement

Preparation

- Prepare a Safety & Health Plan for the Works.
- Erect self-supporting scaffolding and protection in accordance with current Health and Safety Legislation to provide a safe working environment. Scaffold footings to be set out on paving below to spread loads so as to avoid depressions and/or damage to paving.
- Fabric to be inspected carefully by design team from the scaffold prior to works commencing. Allow the design team to carry out a full fabric and measured survey of the structure from all levels of the scaffold where pockets are to be opened up.

Works to Stonework

☐ Exact locations of stones to be removed to be identified from scaffold by Conservation Architect with Design Architect.
☐ Masons must have extensive knowledge and experience of medieval masonry repair, CV's of personnel to be submitted.
☐ All unstable stonework or stonework likely to be dismantled is to be numbered and photographed carefully to allow for reinstatement to original position. A planning frame may also be used for recording the position of stonework ensuring all stone is numbered to correspond with the frame.
☐ All soil and organic material to be removed prior to re-bedding stone.
☐ Carry out mortar analyses in order to provide mixes to be approved for use. Samples of lime mortars will be required for design team approval, prior to commencement.
☐ Source suitable local sands and aggregates for proposed mortar mix for approval of conservation architect.
☐ Source suitable local matching stone where stone are damaged during removal for approval of conservation architect.
☐ Sample panels of work for approval (stone re-bedding and pointing) to be provided in least visible area, prior to commencement of works. These are to be presented at the first site visit by the Design Team.
☐ Carry out facing stone repairs as agreed with conservation architect.
☐ Ensure that masonry is clean and sufficiently moistened prior to lime work commencing. Misting of finished pointing to take place during the initial curing period. The finishing of the pointing is to be carried out as specified. The mortar is to be tamped as required to close shrinkage cracks and produce the desired finish. The mortar may need to be tamped on several occasions. Under no circumstances will a brushed finish to the pointing be acceptable.
☐ All replacement stone to be bedded in a suitable lime mortar as specified.
☐ All structural repairs to be carried out as directed by design team. If structural voids are uncovered on site, inform design team immediately.
☐ Scaffolding to be protected by sheeting to prevent premature drying out of mortar. In addition, allowance to be made to fit vertical sheets of hessian, left in place for an appropriate time (minimum 6 weeks) to allow for sufficient moisture during curing. Hessian to be dampened down continually. Frost protection to be put in place if there is a chance of frost damage. No lime works to be carried out below 5°C or when the temperature is liable to fall below this temperature.
☐ All masonry repairs to be bonded into original.
☐ On completion, protection is to be left in place until the pointing has carbonated satisfactorily.

Appendix E6 NIAH Description on Historic Buildings and Protected Structures

Appendix A to Chapter 14: NIAH Description and Description of protected Structures & Buildings Listed within 100m of the site

Map Ref	RPS No	NIAH Ref No	Title	Period	Type of Structure	Distance From Site	Rating	
A	2639	50080092	Saint Michael's Church	1835 - 1935	Church	30m	Regional	

Description: Freestanding double-height cut limestone former Church of Ireland church, built c.1845, having gabled porch to west (entrance) elevation, eight-bay nave with entrance porch, chapel, and confessional projecting to north (street) elevation. Full-length addition to south elevation of nave, dated 1934, having flat-roofed entrance porches and confessional projections to south elevation of this. Flat-roofed sacristy to east (chancel) elevation. Later in use as school, now in use as Roman Catholic church. Pitched slate roofs having stepped cut stone coping, rooflights over chancel, cut stone bellcote to west elevation having pitched stone roof and carved stone cross finial, carved stone cross finial to east elevation, roof to later wing having copper ridge, carved stone finials to east and west elevations and stone chimneystack to east elevation. Copper roofs to sacristy and south entrance porches. Cast-iron rainwater goods. Cut limestone walls over chamfered cut stone plinth, having cut limestone buttresses to north and south elevations having cut stone shoulders and plinth. Pointed arch windows to all elevations, having cut stone surround, chamfered stone sills and leaded stained glass, paired lancet windows to entrance porches and side chapel, five-light arrangement of windows to east elevation having carved hood moulding, loop windows to confessional bays, north elevation, five-light window arrangement to east and west gables, later wing. Secondary glazing to all windows, with exception of sacristy. Pointed arch door openings with cut stone doorcases and carved stone hood mouldings having decorative stops, double-leaf timber panelled doors, cut stone steps, later ramp to main entrance. Carved marble fonts. Some blind door openings. Interior with painted plastered walls, exposed timber truss roofs, timber gallery over main entrance. Harry Clarke Studio stained glass windows to five lights to chancel. Later wing to south separated from main body of church by pointed arcade with octagonal columns having moulded capital and plinth. Carved timber confessionals within recessed alcoves, carved timber pews, marble altar rail to side altar. Plaque to side altar commemorating foundation of later wing. Set in own landscaped grounds, having shrine to west and site entrances to east and west, double-leaf wrought-iron gates flanked by square-profile cut stone piers. Site bounded by wrought-iron railings on rendered plinth wall.

Appraisal: Originally built as a garrison church for Richmond Barracks, Saint Michael's Church was used as a school in the early twentieth century and given over to the Roman Catholic Church when the barracks was decommissioned in 1926. The later south wing, a sensitive addition to the original building, was designed by architects Robinson and Keefe and built in 1934 as commemorated by a plaque in the church. The form and structure of this building is enhanced by the attention to detail and fine craftsmanship of the cut limestone construction and carved stone details, a testament to the skill and craftsmanship of stonemasons in the nineteenth century. The chancel windows from the studio of Harry Clarke are of particular note and add aesthetic appeal. The quality of materials, and composition and scale of the building, create a pleasing sense of uniformity of design, making a positive architectural contribution to the streetscape. The church has played a significant role in the history of Inchicore, and remains in active use by the local community, contributing to the social character of the area.

B	7817	50080099	Goldenbridge Cemetery Chapel	1825 - 1835	Mortuary Chapel	50m	Regional	

Description: Freestanding rectangular-plan double-height pedimented mortuary chapel, built c.1830, having pedimented prostyle Ionic portico to front (west) elevation. Pitched roof having cross finial to front elevation, moulded cornice, chimney and pediment to rear. Rendered walls over rendered plinth, corner pilasters having moulded cornice and base, rectangular recess to rear (east) elevation. Round-headed window openings to north and south elevations, having painted stone sills and moulded surround, fourteen-over-twelve pane timber sash windows, blocked internally. Interior having plastered ceiling with moulded panels having rosette to centre. Blocked window openings having timber sill and moulded surround. Blind arch to east elevation having moulded capitals to piers. Gravel surface to floor, having remnants of paving. Located on raised podium having granite steps, rendered surface and granite block perimeter, accessed by pathway in landscaped surrounds. Set in centre of cemetery.

Appraisal: This pedimented open chapel, built to designs by Patrick Byrne, remains the centre-piece of Goldenbridge Cemetery, an early nineteenth-century garden cemetery. Drawing from classical references, the elegantly composed façades create a pleasing architectural composition. Despite suffering loss of fabric, the chapel, which recently underwent refurbishment works retains much noteworthy fabric. Located to the centre of the cemetery, addressing a raised granite-edged podium, the building is enhanced by the surrounding mature landscaping.

C		50080100	Sextons House	1860 - 1900	Caretakers House	5m	Regional	

Description: Detached three-bay two-storey sexton's house, built c.1880, having single-storey flat-roofed extension to south elevation. Now disused. Pitched slate roof having terracotta ridge crestings and finial, having exposed timber end trusses, red brick chimneystacks, red brick eaves course and some cast-iron rainwater goods. Yellow brick walls laid in Flemish bond, having moulded red brick string course and plinth course, red brick quoins to all elevations, rendered walls to front (west) and south elevations. Square-headed window openings having cut stone sills, red brick block-and-start surrounds, all openings blocked, timber sash window evident in first floor opening to front elevation. Square-headed door openings to front and rear (east) elevations, having red brick block-and-start surrounds, all openings blocked, granite plinth blocks and steps to rear elevation opening. Located on street, within boundary of Goldenbridge Cemetery, having rear access from cemetery grounds and small yard with shed to south, having castellated brick walls, partially rendered. Square-profile granite War Department bollard to north-east corner of house.

Appraisal: This house completes the north-east boundary of the garden cemetery at Goldenbridge. This was the sexton or graveyard caretaker's house, and it addresses both the street and the entrance to the graveyard. The elegant brick façade is greatly enlivened by the use of decorative brick detailing to highlight key features such as window and door openings while an elegantly executed eaves course, decorative ridge tiles and exposed roof trusses further enhance the building's aesthetic appeal. The brick detailing is testament to the skill and craftsmanship of nineteenth-century brickworkers. Although some windows have been lost, much original fabric is retained. Despite suffering recent damage, it continues to make a positive contribution to Saint Vincent's Street West.

D		50080098	Goldenbridge Cemetery	1825 - 1830	Cemetery	0m	Regional	

	7818	**Description:** Enclosed Roman Catholic cemetery established 1829, with upright and recumbent grave markers of varying materials and designs, dating from 1829 to the beginning of the twenty-first century. Mortuary chapel to centre, on raised podium within mature landscaping. Sexton's house to north-east boundary having small yard to south. Calp limestone boundary walls with medallion motif, having rubble stone parapet to north boundary and north section of west boundary, wrought-iron railings over calp limestone plinth wall to south section of west boundary. Rendered entrance portal to north-east corner having rendered capping with cross finial, plaque with lettering 'D.O.M', segmental-headed opening having block-and-start cut granite surround and double-leaf wrought-iron entrance gates, giving access from Saint Vincent Street West. Located along the Grand Canal, Saint Vincent Street West and former Bulfin Street.
		Appraisal: Established in 1829, following the passing of the 'Act of Easement of Burial Bills' in 1824 , this was the first Roman Catholic cemetery to be opened following Catholic Emancipation in 1829, pre-dating Prospect Cemetery in Glasnevin by three years. The high boundary walls, rich landscaping and delineated paths are typical of a nineteenth-century garden cemetery, as opposed to a churchyard. The variety of designs found in the grave markers is significant in terms of artistic value. The site is further enhanced by the mortuary chapel, the sexton's house, the stone boundary walls and gates, and the mature trees and shrubs. W. T. Cosgrave, former president of the Irish Free State, was buried in Goldenbridge Cemetery in 1965. The cemetery is in no longer in active use but remains a significant part of the social fabric of the area, and an important social and historical reference.

E	50080101	Goldenbridge Cemetery Walls	1825 - 1830	Walls	0m	Regional	

	Description: Calp limestone boundary walls to Goldenbridge Cemetery, constructed c.1830, having entrance portal and gates to north-east corner. Rubble limestone walls having medallion detail to internal elevation. North boundary and north section of west boundary having rubble stone parapet, south section of west boundary having wrought-iron railings over calp limestone plinth wall with concrete capping, south boundary having rendered capping, curved niches and undulating parapet to east end. Sexton's house to north-east abutting boundary wall. Brick infill repairs to sections of south boundary wall. Boundary wall encloses garden cemetery, having gates to north-east corner giving access from Saint Vincent's Street West.
	Appraisal: The walls surrounding Goldenbridge Cemetery create a sense of enclosure within the landscaped burial grounds, typical of early nineteenth-century garden cemeteries. Despite some alterations, the original fabric remains intact, adding a patina of age to the surrounding streetscape. It forms part of a significant group of related structures at the cemetery, with the mortuary chapel and sexton's house.

F	50080093	Inchicore Primary Care Centre	1830 - 1870	Barracks	10m	Regional	

	Description: (NOTE: DESCRIPTION IS NOW SUPERSEDED DUE TO DATE OF NIAH ASSESSMENT) Detached twelve-bay single-storey former barracks, built c.1850, having two-bay entrance breakfront to front (west) elevation, half-dormer attic to north end and two-storey extension with pitched-roof to rear (east) elevation. Later in use as social housing, subsequently in use as school, now in use as health centre. Hipped slate roof with cut granite eaves course, having moulded brown brick chimneystack flanked by pair of hipped dormer windows to north elevation, parapet to breakfront having cut granite coping and carved limestone cross finial. Cast-iron rainwater goods. Snecked cut limestone walls over limestone plinth, having cut granite impost course and circular blind opening to pediment. Plaque commemorating poet and soldier Francis Ledwidge to north elevation. Round-headed recessed window openings with granite sills to front and south elevations, having cut limestone voussoirs, granite impost blocks and yellow brick reveals, nine-over-nine pane timber sash windows to front elevation, yellow brick infill in blocked window opening to south elevation. Round-headed window openings to dormer windows, having cut granite sills and red brick block-and-start surrounds, three-over-three pane timber sash windows. Square-headed window openings with stone sills to north elevation, ground floor, having red brick block-and-start surround and three-over-three pane timber sash windows. All openings having external secondary glazing. Glazed entrance doors having glazed upper section to breakfront, and timber panelled door having glazed upper section to north end of front elevation, in round-headed former window openings, having cut limestone voussoirs, granite impost blocks and yellow brick reveals. Round-headed blocked door opening to south elevation, having cut limestone voussoirs, granite impost blocks, yellow brick reveals and yellow brick infill. Square-headed blocked door opening to north elevation having red brick block-and-start surround and yellow brick infill. Located on street adjacent to two surviving barracks buildings, addressing the site of recently demolished Saint Michael's Estate housing complex.
	Appraisal: (NOTE: DESCRIPTION IS NOW SUPERSEDED DUE TO DATE OF NIAH ASSESSMENT) This building and the two adjacent barracks buildings were part of the Richmond Barracks complex dating from 1814, and form a focal point in the streetscape. The historic significance of the barracks is well-documented. All those arrested after the 1916 Rising were taken to Richmond Barracks for processing, including the leaders, who were held in the gymnasium prior to the court martial. Following the establishment of the Irish Free State in 1922, the barracks were taken over by the Irish Army and renamed Kehoe Barracks. In 1924 the barracks were given over to Dublin Corporation and converted to provide social housing. Kehoe Square was demolished in 1969 to allow the construction of Saint Michael's Estate housing which was demolished in 2013. The three surviving barracks buildings were in use as a Christian Brothers' school until recently. The design of the barracks is grounded in long-established traditions with a symmetrical plan and classically-derived proportions. The construction in cut limestone is typical of the solidity and traditional materials favoured by barracks in the nineteenth century. The stone and brick detailing are worthy of note and add aesthetic appeal. With much early fabric surviving intact, the barracks add to the historic character of the locality. In active use by the local community, it retains an important social function.

G	50080094	Richmond Barracks	1830 - 1870	Barracks	10m	Regional	

	Description: (NOTE: DESCRIPTION IS NOW SUPERSEDED DUE TO DATE OF NIAH ASSESSMENT) Detached seven-bay single-storey former barracks, built c.1850, having attic accommodation to south end and single-storey flat-roofed extension to rear (east) elevation. Later in use as social housing, subsequently in use as school, currently disused. Pitched slate roof having decorative polychrome eaves course, some cast-iron rainwater goods. Yellow brick walls laid in English bond over chamfered granite and limestone, square-headed recessed panels to north elevation having chamfered red brick reveals, dentilated polychrome brick head detail and chamfered sills. Segmental-headed window openings to front (west) and south elevations, having yellow brick voussoirs and cut granite sills, set within square-headed recesses. Blocked window openings to front elevation, timber sash windows to south elevation, ground floor. Segmental-headed door opening to south elevation having yellow brick voussoirs, square-headed door opening to north elevation having concrete lintel. Located on street between two surviving barracks buildings, addressing the site of recently demolished Saint Michael's Estate housing complex.

		Appraisal: (NOTE: DESCRIPTION IS NOW SUPERSEDED DUE TO DATE OF NIAH ASSESSMENT) This building and the two adjacent barracks buildings were part of the Richmond Barracks complex dating from 1814, and form a focal point in the streetscape. The historic significance of the barracks is well-documented, all those arrested after the 1916 Rising were taken to Richmond Barracks for processing, including the leaders, who were held in the gymnasium prior to the court martial. Following the establishment of the Irish Free State in 1922, the barracks were taken over by the Irish Army and renamed Kehoe Barracks. In 1924 the barracks were given over to Dublin Corporation and converted to provide social housing. Kehoe Square was demolished in 1969 to allow the construction of Saint Michael's Estate housing which was demolished in 2013. The three surviving barracks buildings were in use as a Christian Brothers' school until the late twentieth century, this central building being used as the school gymnasium. Although some windows have been lost, much original fabric is retained. The elaborate brick detailing is testament to the skill and craftsmanship of brickworkers in the nineteenth century. The composition and scale of the building create a pleasing formal facade, making a positive contribution to the area. Both this building and the adjacent former barracks to the south will be restored as a 1916 commemorative project.						
H		50080095	Richmond Barracks	1830 - 1870	Barracks	10m	Regional	
	8705	**Description: (NOTE: DESCRIPTION IS NOW SUPERSEDED DUE TO DATE OF NIAH ASSESSMENT)** Detached twelve-bay single-storey former barracks, built c.1850, having central two-bay pedimented entrance breakfront to front (west) elevation, and half-dormer attic to south elevation. Later in use as social housing, subsequently in use as school, currently disused. Hipped slate roof with cut stone eaves course, having moulded brown brick chimneystack flanked by pair of hipped dormer windows to south elevation, parapet to breakfront having cut granite coping and carved limestone cross finial. Cast-iron rainwater goods. Snecked cut limestone walls over limestone plinth, having cut granite impost course and circular blind opening to pediment having carved stone crest '1929 / FACERE ET DOCERE'. Round-headed recessed window openings with cut granite sills to front and north elevations, having cut limestone voussoirs, cut granite impost blocks and yellow brick reveals. Round-headed window openings to dormer windows, having cut stone sills and red brick block-and-start surrounds. All openings blocked or partially blocked, timber sash windows evident. Round-headed recessed blocked door openings to front and north elevations, having cut limestone voussoirs, granite impost blocks and yellow brick reveals. Located on street adjacent to two surviving barracks buildings, addressing the site of recently demolished Saint Michael's Estate housing complex.						
		Appraisal: (NOTE: DESCRIPTION IS NOW SUPERSEDED DUE TO DATE OF NIAH ASSESSMENT) This building and the two adjacent barracks buildings were part of the Richmond Barracks complex dating from 1814, and form a focal point in the streetscape. The historic significance of the barracks is well-documented, all those arrested after the 1916 Rising were taken to Richmond Barracks for processing, including the leaders, who were held in the gymnasium prior to the court martial. Following the establishment of the Irish Free State in 1922, the barracks were taken over by the Irish Army and renamed Kehoe Barracks. In 1924 the barracks were given over to Dublin Corporation and converted to provide social housing. Kehoe Square was demolished in 1969 to allow the construction of Saint Michael's Estate housing which was demolished in 2013. The three surviving barracks buildings were in use as a Christian Brothers' school until the late twentieth century. The design of the barracks is grounded in long-established traditions with a symmetrical plan and classically-derived proportions. The construction in cut limestone is typical of the solidity and traditional materials favoured by the military in the nineteenth century. The stone and brick detailing are worthy of note and add aesthetic appeal. Although some windows have been lost, much original fabric is retained. The composition and scale of the building create a pleasing formal facade, making a positive contribution to the area. Both this building and the adjacent former barracks to the north will be restored as a 1916 commemorative project.						
I			Richmond Barracks Boundary Wall	1812	Defensive	0m	Regional	
J		50080089	Mcdowells Public House	1865-1870	Public House	22m	Regional	
		Description: Attached pair of three-bay two-storey former houses with attic accommodation, dated 1868, now in use as public house and having shopfronts to front (south) elevation, with lower two-storey lean-to return to rear (north) elevation. Pitched slate and artificial slate roof having rooflights, lined-and-ruled rendered chimneystack to west gable, rendered parapet with cornice to front (south) elevation, and cast-iron rainwater goods. Lined-and-ruled rendered walls, having channelled quoins, and painted lettering. Square-headed window openings, having rendered window surrounds, painted sills, and one-over-one pane timber sash windows. Shopfront to west comprising central display windows flanked by door openings, timber panelled pilasters with carved foliated consoles flanking fascia and dentillated cornice. Timber framed windows, panelled riser, timber panelled double-leaf door to public house, sheeted timber door with plain overlight to east. Later shopfront to east, having recent steel shutters.						
		Appraisal: This public house occupies a corner site on Emmet Road and shares similar scale and proportions with neighbouring buildings, making a positive contribution to a coherent streetscape. Its form is enhanced by render detailing such as its window surrounds and quoins, while timber sash windows add a patina of age. The survival of the shopfronts is significant, demonstrating the quality of craftsmanship in the nineteenth and early twentieth centuries. Richmond House was a popular public house with the soldiers of Richmond Barracks, an infantry barracks built to the immediate south in 1810 and closed in 1924. The public house is of social as well as architectural interest, and is painted in the colours of Saint Patrick's Athletic Football Club, with the rear of the building overlooking Richmond Park stadium to the north.						
K		50080383	Golden Bridge	1740 - 1780	Bridge	110m	Regional	
		Description: Single-arch masonry bridge, built c.1760, carrying Emmet Road over Camac River. Road widened to north in twentieth-century, having recent wall to north elevation. Segmental-arch with rubble limestone voussoirs, walls, and parapet wall to south elevation. Square-headed poured concrete lintel and soffit to north elevation having cement block parapet wall and cement coping. Tarmacadam carriageway, with cement-paved path to north and south.						
		Appraisal: Although subsequently altered due to road widening, this traditionally constructed bridge in unrefined locally-sourced stone is evidence of the long established settlement here. As a crossing point over the River Camac it would have provided access to nearby Richmond Barracks from the west. Golden Bridge was mapped as early as John Rocque's map of Dublin city and environs of 1773. Still in use today, it has given its name to the townlands to the south, Goldenbridge North and Goldenbridge South, indicating its significance to the area in the past.						
L		50080384	Emmett Road Postbox	1920 - 1940	Post Box	80m	Regional	

		Description: Freestanding cast-iron pillar box, erected c.1930. Moulded neck, shallow domed cap, curved hinged door having aperture to east elevation. Monogram 'P&T' to door. Maker's mark 'CARRON COMPANY / STIRLINGSHIRE' to rear.						
		Appraisal: This attractive piece of street furniture represents the high quality of mass-produced cast-iron work in the early years of the twentieth century. The insignia, representing the national Posts & Telegraphs service (fl. 1924-84), dates the box to the early years of the Irish State and provides decorative as well as contextual interest. It continues to fulfil its function and is testimony to the robust quality of manufacture. Following Independence, the Irish government continued to commission pillar boxes from British firms as well as Irish ones. This model was erected in Britain during the reign of George V (1910-1936), with the GR cipher rather than the P&T monogram on the door. It is indicative of the continuity of design right through the nineteenth and twentieth centuries, until the adoption of rectangular steel post boxes in more recent decades.						
M		50080088	Inchicore United Workmans Club	1880 - 1900	Clubhouse	45m	Regional	
		Description: Attached five-bay two-storey workmen's club, built c.1890, having lower two-storey return to rear (north) elevation. Hipped artificial slate roof, having red brick chimneystacks with cornices, and paired timber brackets to eaves. Red brick walls laid in English garden wall bond to front (south) elevation, with moulded brick string course. Chamfered plinth course. Lined-and-ruled rendered walls to east and rear elevations. Elliptical-headed window openings to front elevation, having red brick voussoirs and cut granite sills with red brick sill courses. Continuous moulded red brick label moulding to ground floor windows. Replacement uPVC windows, and timber-framed glazed signage boards to interior of windows. Elliptical-headed door opening having red brick voussoirs, recent steel door with shuttering.						
		Appraisal: Inchicore United Workmans Club has acted as a place of congregation and recreation for local workmen since the late nineteenth-century. This symmetrical and well-proportioned building exhibits skilled craftsmanship, and is typical of late nineteenth-century construction. Though the windows and doors have been replaced, the building retains an early character, and the glazed panels to the interior of the ground floor windows are a reminder of the former windows. Inchicore village gained a large working-class population in the mid nineteenth-century with the construction of the Great Southern & Western Railway Works in 1846 and its associated housing, and a large paper mill at Goldenbridge.						
N		50080096	Mercy Convent Gate Lodge	1860 - 1900	Gate Lodge	10m	Regional	
		Description: Detached three-bay two-storey gate lodge, built c.1880, having single-storey flat-roofed extension to west elevation. Now disused. Hipped artificial slate roof having terracotta ridge crestings, coving to eaves, red brick chimneystacks with projecting chimneybreasts to east and west elevations, having moulding and embellishment to brickwork. Some cast-iron rainwater goods. Red brick walls laid in English garden wall bond having cut limestone platband with carved cross detail to east elevation. Segmental-headed window openings having painted granite sills, and red brick voussoirs, chamfered reveals and six-over-six timber sash windows to front (north) elevation, ground floor. Segmental-headed door opening having red brick voussoirs, chamfered reveals and granite step, blocked opening. Pitched artificial slate canopy over entrance having terracotta ridge crestings, timber panelled barge boards and decorative timber brackets. Located on street, at entrance to former convent and industrial school, having garden to south and enclosure to north having later railings. Red brick gate piers to north, with cut limestone string course, and pointed limestone capping having decorative stone cross. Later metal gate piers with wrought-iron double-leaf entrance gates with cross finial, matching pedestrian gate.						
		Appraisal: A well-designed and carefully executed gate lodge with decorative brick detailing that is testament to the skill and craftsmanship of nineteenth-century brickworkers. The brickwork and stone embellishment, the unusual eaves detail and the decorative ridge tiles are of particular note, adding aesthetic appeal and a patina of age to the streetscape. Although some windows have been lost, much original fabric is retained. The cross motifs indicate that it was built as a gate lodge to the convent and industrial school to the west, and typically of Victorian gate lodges it combines a modest size with highly decorative elements. It addresses the entrance to the site, while presenting a decorative yet blank elevation to the street.						
O		50080397	Saint Vincent's Convent	1855 - 1865	Chapel	150m	Regional	
		Description: Attached cruciform-plan Roman Catholic church, built c.1860, having four-bay nave, full-height chancel and transepts, sacristies to north-east and south-east re-entrant corners of transept with lean-to slate roofs, and gabled porches to north-west and south-west re-entrant corners of transepts. Now in use as educational building. Pitched slate roofs with cut granite copings having carved granite cross finials, and cast-iron rainwater goods. Painted red brick walls laid in Flemish bond, with chamfered plinth course. Stepped buttresses with chamfered granite coping, angled to corners. Pointed arch lancet windows, arranged in threes to gables, having red brick voussoirs, carved granite keystones, chamfered granite sills, and leaded stained glass windows. Circular windows to sacristies, set in pointed arch recesses, now blocked. Tudor arch door openings to porches, having double-leaf timber battened doors. Two-storey bay to south-west corner, linking to convent, having pitched slate roof, painted red brick walls, and recessed Tudor arch door surround, with chamfered reveals, shouldered door opening with timber battened door, and plain overlight. Interior having cruck roof with exposed roof timbers supported on painted masonry corbels. Groin vaulting to crossing. Plastered walls with chamfered pointed arches to crossing. Gallery to west end. Shouldered square-headed door openings to sacristy rooms to chancel, timber battened doors. Recent subdivisions and alteration. Former convent buildings attached to south-west corner.						
		Appraisal: This former Roman Catholic church forms part of a complex of religious and industrial buildings associated with the former Saint Vincent's Industrial School. In 1855 Cardinal Cullen requested the Sisters of Mercy to provide a rehabilitation service to women who had been incarcerated in Mountjoy Jail. Cardinal Cullen rented a premises at Goldenbridge and by 1858 the Sisters of Mercy had established a convent, national school for the poor of the area and a commercial laundry, as well as the rehabilitation service for the former prisoners. The Griffith's Valuation map of c.1860 shows a Roman Catholic chapel on the site, while the convent buildings were constructed to the south later in the century. The church is of architectural interest, and though the interior has been altered, the building retains much of its early form and materials. The church may have been designed by John Bourke (d.1871), who carried out designs from 1858 for the Saint Vincent de Paul Reformatory at Goldenbridge. Bourke designed many commissions for the Catholic Church throughout his career, and it was as a designer of churches, convents and related schools and institutions that he made his reputation. The building is of historical and social significance as part of the Goldenbridge Convent and Industrial School complex.						
P		50080097	Saint Anne's	1870 - 1910	Presbytery	95m	Regional	

		Description: Detached three-bay two-storey former presbytery, built c.1890, having two-storey return with catslide roof to rear (north) elevation, and single-storey flat-roofed extension to west elevation. Now in use as private house. Hipped slate roof having clay ridge tiles, red brick chimneystacks, moulded brick eaves course and some cast-iron rainwater goods. Red brick walls. Segmental-arched window openings having cut granite sills and red brick voussoirs, replacement uPVC windows. Round-headed door opening having red brick doorcase with moulded brick cornice, moulded surround, impost and plinth, cut granite keystone, timber panelled door having plain fanlight, and granite step. Set back from road, front garden enclosed by metal railings over cut granite plinth, with matching pedestrian gate, garden to west and north enclosed by calp limestone boundary wall having red brick piers and vehicular entrance to south elevation. **Appraisal:** This well-proportioned middle-sized house occupies a prominent site along the Grand Canal. The elegant brick façade is enlivened through the use of decorative brick and granite detailing to highlight the door opening, while an elegantly executed eaves course further enhances the building's design. The limestone boundary walls add a patina of age to Saint Vincent Street West. Originally a presbytery, it formed part of a larger group of associated religious buildings in the area.

Report Limitations

Synergy Environmental Ltd. t/a Enviroguide Consulting (hereafter referred to as "Enviroguide") has prepared this report for the sole use of Dublin City Council in accordance with the Agreement under which our services were performed. No other warranty, expressed or implied, is made as to the professional advice included in this Report or any other services provided by Enviroguide.

The information contained in this Report is based upon information provided by others and upon the assumption that all relevant information has been provided by those parties from whom it has been requested and that such information is accurate. Information obtained by Enviroguide has not been independently verified by Enviroguide, unless otherwise stated in the Report.

The methodology adopted and the sources of information used by Enviroguide in providing its services are outlined in this Report.

The work described in this Report is based on the conditions encountered and the information available during the said period of time. The scope of this Report and the services are accordingly factually limited by these circumstances.

All work carried out in preparing this report has used, and is based upon, Enviroguide's professional knowledge and understanding of the current relevant national legislation. Future changes in applicable legislation may cause the opinion, advice, recommendations or conclusions set-out in this report to become inappropriate or incorrect. However, in giving its opinions, advice, recommendations and conclusions, Enviroguide has considered pending changes to environmental legislation and regulations of which it is currently aware. Following delivery of this report, Enviroguide will have no obligation to advise the client of any such changes, or of their repercussions.

Enviroguide disclaim any undertaking or obligation to advise any person of any change in any matter affecting the Report, which may come or be brought to Enviroguide's attention after the date of the Report.

Certain statements made in the Report that are not historical facts may constitute estimates, projections or other forward-looking statements and even though they are based on reasonable assumptions as of the date of the Report, such forward-looking statements by their nature involve risks and uncertainties that could cause actual results to differ materially from the results predicted. Enviroguide specifically does not guarantee or warrant any estimate or projections contained in this Report.

Unless otherwise stated in this Report, the assessments made assume that the site and facilities will continue to be used for their current or stated proposed purpose without significant changes.

The content of this report represents the professional opinion of experienced environmental consultants. Enviroguide does not provide legal advice or an accounting interpretation of liabilities, contingent liabilities or provisions.

If the scope of work includes subsurface investigation such as boreholes, trial pits and laboratory testing of samples collected from the subsurface or other areas of the site, and environmental or engineering interpretation of such information, attention is drawn to the fact that special risks occur whenever engineering, environmental and related disciplines are applied to identify subsurface conditions. Even a comprehensive sampling and testing programme implemented in accordance with best practice and a professional standard of care may fail to detect certain conditions. Laboratory testing results are not independently verified by Enviroguide and have been assumed to be accurate. The environmental, ecological, geological, geotechnical, geochemical and hydrogeological conditions that Enviroguide interprets to exist between sampling points may differ from those that actually exist. Passage of time, natural occurrences and activities on and/or near the site may substantially alter encountered conditions.

APPENDICES

Appendix I – 2020/21 Winter Bird Survey Data

Appendix II – 2021/22 Winter Bird Survey Data

1 INTRODUCTION

Enviroguide Consulting were commissioned by Dublin City Council to carry out a series of Wintering Bird Surveys in relation to a Proposed Development at Emmet Road, Co. Dublin.

2 QUALITY ASSURANCE AND COMPETENCE

Synergy Environmental Ltd., T/A Enviroguide Consulting, is wholly Irish Owned multi-disciplinary consultancy specialising in the areas of the Environment, Waste Management and Planning. All our consultants carry scientific or engineering qualifications and have a wealth of experience working within the Environmental Consultancy sectors.

Professional memberships include the Chartered Institution of Wastes Management (CIWM), the Irish Environmental Law Association and Chartered Institute of Ecology and Environmental Management (CIEEM).

All surveying and reporting has been carried out by qualified and experienced ecologists and environmental consultants. Brian McCloskey, Project Ecologist and Ornithologist with Enviroguide, and Eric Dempsey, Senior Ornithologist undertook the wintering bird surveys at the Site of the Proposed Development.

Brian McCloskey is a graduate Ecologist and experienced Ornithologist with 12 years of bird survey experience. Brian is a longstanding and active member of Bird Watch Ireland and has provided Ornithology survey work for ecological consultancies, e.g., vantage points surveys of gulls, terns, raptors, waders and wildfowl; hinterland surveys of the above as well as riverine species; and breeding waders and country birds. Brian is highly experienced with all survey methodologies and with surveying all species groups of Irish birds and migrants.

Eric Dempsey is an Environmental Consultant and Senior Ornithologist who has worked on a wide range of conservation, research, and ecological monitoring projects across Ireland. Eric is the author of the best-selling books, The Complete Field Guide to Ireland's Birds and Finding Birds in Ireland and is experienced in coordinating and undertaking surveys along with being highly proficient in report writing and data management. Eric is highly experienced with all survey methodology and has inputted in various Environmental Impact Assessment Reports, Environmental Assessments and Appropriate Assessments.

3 BACKGROUND

The purpose of this report is to provide a robust evidenced based assessment of whether the Site of the Proposed Development is, or has the potential to be, in its current state, utilised as *ex-situ* feeding/roosting grounds by species of shorebird and waterfowl listed as Special Conservation Interest (SCI) species for nearby Special Protection Areas (SPAs).

Member States are required to designate SPAs under the EU Birds Directives (79/409/EEC), to provide protection for bird species of special conservation importance. These sites along with Special Areas of Conservation (SACs) are collectively known as Natura 2000 sites or

'European Sites', and form part of Natura 2000, a network of protected sites located throughout the European Community.

The following SPAs are located within proximity to the Site of the Proposed Development: South Dublin Bay and River Tolka Estuary SPA ca. 6.9km to the east, Baldoyle Bay SPA ca.14.3km to the northeast, North Bull Island SPA ca. 9.7km to the northeast and Wicklow Mountains SPA located ca.11.1km to the south.

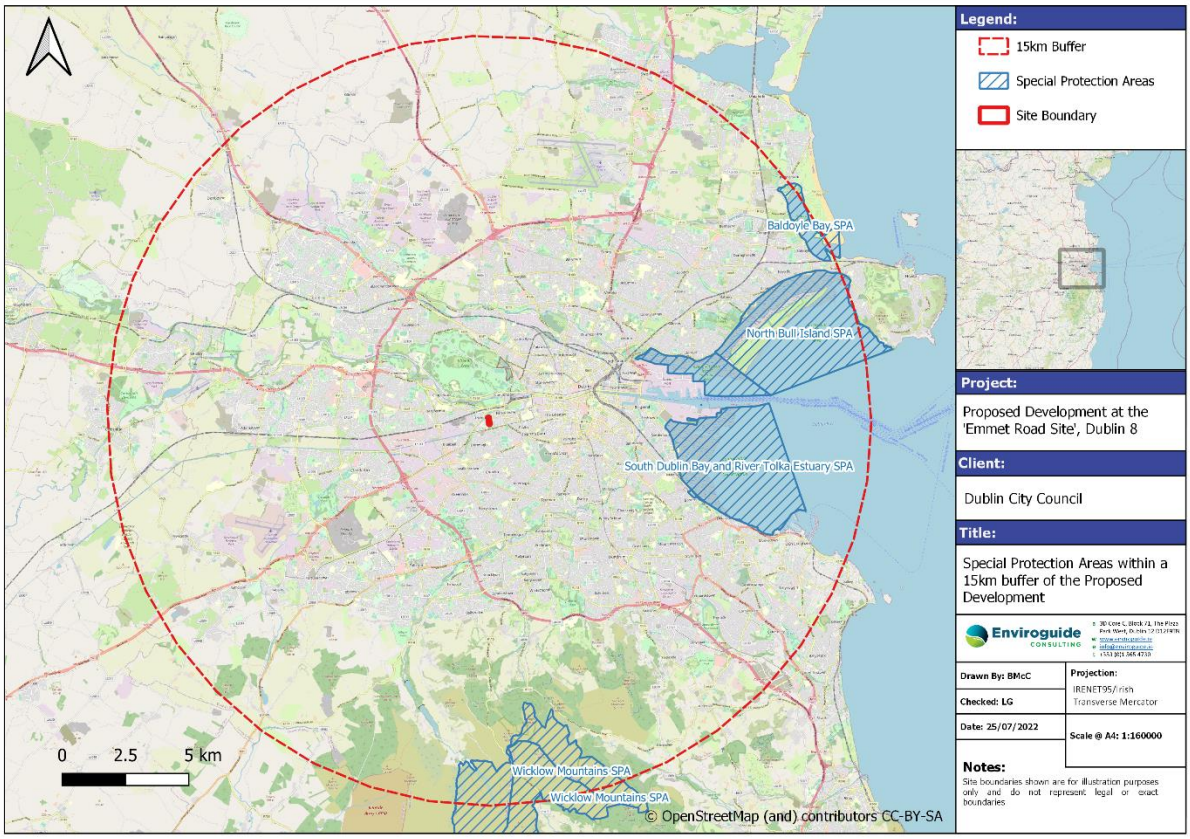

Figure 1: Special Protection Areas (SPAs) (in blue) located within proximity to the Site of the Proposed Development (red marker).

3.1 Qualifying Interests

The species listed as SCIs for these designated European sites are listed in Table 1 below. There are 23 species that are listed as SCIs for the aforementioned SPA's, 21 waterfowl/shore bird species and 2 terrestrial species.

Table 1: Bird species of Special Conservation Interest listed for nearby SPAs.

Special Protection Area (SPA)			
Site Code	**Site Name**	**Qualifying Interests**	**Distance to Site**

004024	South Dublin Bay and River Tolka Estuary SPA	Light-bellied Brent Goose (*Branta bernicla hrota*) [A046] Oystercatcher (*Haematopus ostralegus*) [A130] Ringed Plover (*Charadrius hiaticula*) [A137] Grey Plover (*Pluvialis squatarola*) [A141] Knot (*Calidris canutus*) [A143] Sanderling (*Calidris alba*) [A144] Dunlin (*Calidris alpina*) [A149] Bar-tailed Godwit (*Limosa lapponica*) [A157] Redshank (*Tringa totanus*) [A162] Black-headed Gull (*Chroicocephalus ridibundus*) [A179] Roseate Tern (*Sterna dougallii*) [A192] Common Tern (*Sterna hirundo*) [A193] Arctic Tern (*Sterna paradisaea*) [A194] Wetland and Waterbirds [A999]	6.2km
004040	Wicklow Mountains SPA	Merlin (*Falco columbarius*) [A098] Peregrine (*Falco peregrinus*) [A103]	11km
004016	Baldoyle Bay SPA	Light-bellied Brent Goose (*Branta bernicla hrota*) [A046] Shelduck (*Tadorna tadorna*) [A048] Ringed Plover (*Charadrius hiaticula*) [A137] Golden Plover (*Pluvialis apricaria*) [A140] Grey Plover (*Pluvialis squatarola*) [A141] Bar-tailed Godwit (*Limosa lapponica*) [A157] Wetland and Waterbirds [A999]	14.2km
004006	North Bull Island SPA	Light-bellied Brent Goose (*Branta bernicla hrota*) [A046] Shelduck (*Tadorna tadorna*) [A048] Teal (*Anas crecca*) [A052] Pintail (*Anas acuta*) [A054] Shoveler (*Anas clypeata*) [A056] Oystercatcher (*Haematopus ostralegus*) [A130] Golden Plover (*Pluvialis apricaria*) [A140] Grey Plover (*Pluvialis squatarola*) [A141] Knot (*Calidris canutus*) [A143]	9.3km

		Sanderling (*Calidris alba*) [A144] Dunlin (*Calidris alpina*) [A149] Black-tailed Godwit (*Limosa limosa*) [A156] Bar-tailed Godwit (*Limosa lapponica*) [A157] Curlew (*Numenius arquata*) [A160] Redshank (*Tringa totanus*) [A162] Turnstone (*Arenaria interpres*) [A169] Black-headed Gull (*Chroicocephalus ridibundus*) [A179] Wetland and Waterbirds [A999]	

It is noted that the three Tern species listed above are strictly pelagic species, except when breeding, and visit Ireland during the summer. These species in particular would not be expected to frequent the Site of the Proposed Development at any time of the year due to their coastal and pelagic requirements.

The majority of the 21 waterfowl/shorebird species are not expected to utilise the Site lands due to a combination of their largely coastal nature as shorebirds, and for their respective preferences for particular types of inland feeding grounds i.e., arable/pasture fields and short sward grasslands.

4 EXISTING ENVIRONMENT

The Site of the Proposed Development is located near Inchicore, just off Emmet Road beside the Goldenbridge Cemetery, in south County Dublin. The Site is situated in a primarily residential/ commercial area on the outskirts of the villages of Inchicore and Kilmainham, and measures approximately 4.68 hectares (including watermain upgrade along Emmet Road) and c. 3.72 hectares on the main development site which is bounded to the north by Emmet Road, the east by the St. Michael's Estate, the west by St. Vincent's Street West and to the south by the Goldenbridge Cemetery.

Figure 2 shows the Site location.

The following habitat types (Fossitt, 2000) were recorded within Site of the Proposed Development:

- *BL3 – Buildings and artificial surfaces*
- *GA2 – Amenity grassland*
- *GS2 – Dry meadows and grassy verges*
- *ED3 – Recolonising bare ground*
- *BC4 – Flower beds and borders*
- *BL1 – Stone walls and other stone work*

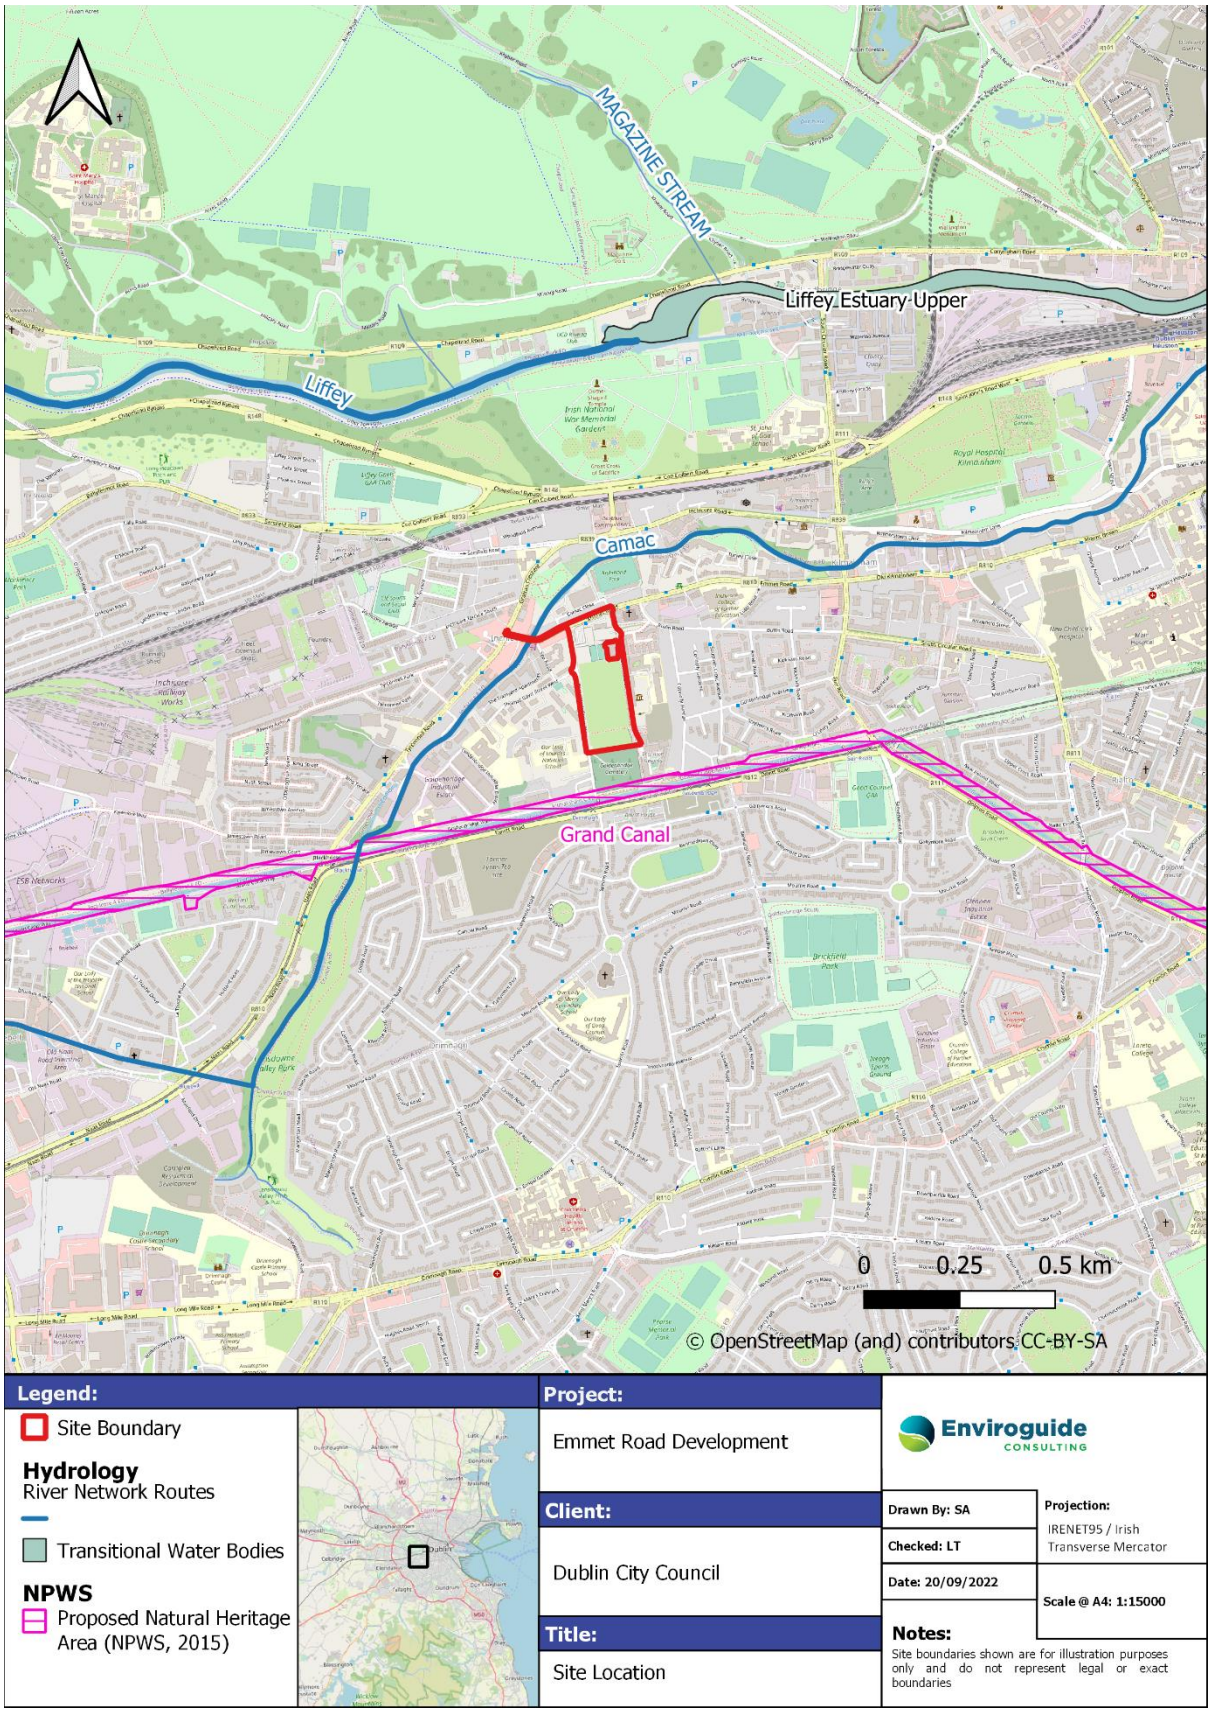

Figure 2: Site location

Figure 3: Survey Area

5 METHODOLOGY

5.1 Habitat suitability Assessment

Prior to commencement of surveys in October 2021, a site walkover was conducted by Enviroguide Senior Ecologist Liam Gaffney and an initial assessment was made on the quality of the lands with regard to their *ex-situ* potential. Based on this assessment, the methodology for the survey was designed with a view to providing the scientific data necessary to ascertain with confidence the level of usage of the Site lands by the relevant SCI bird species (As detailed in Table 1).

5.2 Survey Methodology

During 2020/21 a total of 6 survey days were carried out at the Site; covering October, November and December 2020 and January, February and March 2021. These surveys provide a summary of the usage of the Site by SCI species during the winter. A total of 36 hours of survey were carried out at the Site throughout the 2020/21 winter.

Table 2: Winter Waterfowl and Shorebird Surveys conducted at the Site of the Proposed Development in 2020/21

Winter Bird survey Dates
30th October 2020
28th November 2020
27th December 2020
19th January 2021
24th February 2021
30th March 2021

During 2021/22 a total of 5 survey days were carried out at the Site; covering December 2021, January and March 2022. These surveys provide a summary of the usage of the Site by SCI species during the 2021/22 winter. A total of 30 hours of survey were carried out at the Site.

Table 3: Winter Waterfowl and Shorebird Surveys conducted at the Site of the Proposed Development in 2021/22

Winter Bird survey Dates
1st December 2021
20th December 2021
24th January 2022
4th March 2022
21st March 2022

The survey methodology was as followed:

- Each survey day either commenced at dawn and continued for 6 hours or commenced 6 hours prior to dusk and ended at dusk. These timings were alternated each survey day to capture any possible temporal trends in the usage of the lands by SCI species.
- Each day, prior to the commencement of the survey, the Site was walked and checked for any obvious evidence of SCI species usage e.g., Light-bellied Brent Goose (LBBG) droppings.
- Each hour the Site was walked and observed for a period of approx. 20 mins with any SCI species activity on, or in flight over the Site recorded.
- All SCI species that were observed visiting the Site or flew overhead were recorded, as were any other species of note e.g., rare passerines etc.

All surveys were undertaken using:

- Optricon 8x42 binoculars (or equivalent)
- Optricon 20x Telescope (or equivalent)
- Agreed survey methodology.
- Field notebook.

6 SURVEY RESULTS

6.1 2020/21 Survey Results

6.1.1 Ex-situ usage

The first set of winter bird Surveys at the Site of the Proposed Development comprised of 6 survey days i.e., a total of 36 hourly counts across October, November and December 2020 and January, February and March 2021.

Out of a total of 36 hourly counts: Five waterfowl/shorebird species were recorded utilising the Site lands. Light-bellied Brent Geese (*Branta bernicla hrota*) were recorded feeding on the

Site on just one occasion. Light-bellied Brent Goose droppings, a distinctive indicator of this species' presence/usage of a Site, were also recorded on just one occasion.

The only other shorebirds recorded utilising the Site were Gull species such as Herring Gull (*Larus argentatus*), Common Gull (*Larus canus*) and Black-headed Gull (*Larus ridibundus*), loafing about on the Site. Lesser black-backed Gull (Larus fuscus) was recorded during the March surveys.

Table 4: Waterfowl/Shorebird species recorded at the Site during the 2020/21 winter

Waterfowl/Shorebird species recorded 2020/21					
Species	**Scientific name**	**BOCCI Status**	**Activity**	**Date**	**Peak Count**
Light-bellied Brent Goose	*Branta bernicla hrota*	Amber	Feeding on Site	28/11/2020	14
Lesser Black backed Gull	*Larus fuscus*	Amber	Loafing on Site	30/03/2021	30
Herring Gull	*Larus argentatus argenteus*	Amber	Flying around and loafing on Site	All survey dates	18
Black-headed Gull	*Larus ridibundus*	Amber	Flying around and loafing on the Site	30/10/2020 27/12/2020 19/01/2021 24/02/2021	27
Common Gull	*Larus canus*	Amber	Flying around and loafing on the Site	30/10/2020 27/12/2020 19/01/2021	1

6.2 2021/22 Survey Results

6.2.1 Ex-situ usage

The second set of winter bird Surveys at the Site of the Proposed Development comprised of 5 survey days i.e., a total of 30 hourly counts in December 2021, January and March 2022.

Out of a total of 30 hourly counts: Eight waterfowl/shorebird species were recorded in the vicinity of the Site lands. Four of these species were only recorded as flying over the Site rather than using the Site as a feeding ground. Light-bellied Brent Geese were recorded once flying over the Site. Light-bellied Brent Goose droppings were not recorded on any of the Site visits, despite thorough Site walkovers carried out each survey day.

The only shorebirds recorded utilising the Site were all Gull species with Herring Gull, Common Gull and Black-headed Gull loafing about on the Site. Lesser black-backed Gull was recorded on the March surveys.

6.2.2 Fly overs

Out of a total of 30 hourly counts: 4 instances of waterfowl/shorebird species in flight over the Site were recorded. No records of Merlin or Peregrine were made at or over the Site during any of the survey days.

Records of interest are highlighted below:

- 24/01/2022 – 230 Light-bellied Brent Geese flew south-east over the Site.
- 21/03/2022 – A Mute Swan (*Cygnus olor*) flew west over the Site.
- 21/03/2022 – An Oystercatcher (*Haematopus ostralegus*) flew east over the Site.
- 21/03/2022 – 9 Mallard (*Anas platyrhynchos*) flew east over the Site.

Herring Gull, Common Gull, Lesser black-backed Gulls and Black-headed Gull were the most common shorebird species observed loafing on the Site lands along with common passerine species such as corvids, wood pigeons, and smaller hedgerow species.

Table 5: Waterfowl/Shorebird species recorded on the Site of the Proposed Development 2021/22

Waterfowl/Shorebird species recorded 2021/22					
Species	**Scientific name**	**BOCCI Status**	**Activity**	**Date**	**Peak Count**
Lesser Black backed Gull	*Larus fuscus*	Amber	Flying over and loafing on the Site	21/03/2022	3
Herring Gull	*Larus argentatus argenteus*	Amber	Flying over and loafing on the Site	All survey dates	15
Black-headed Gull	*Larus ridibundus*	Amber	Flying over and loafing on the Site	All survey dates	43
Common Gull	*Larus canus*	Amber	Flying over and loafing on the Site	01/12/2021 24/01/2022 04/03/2022	4

7 CONCLUSIONS

Results of the winter bird surveys carried out over two winters (5 days across December 2021, January and March 2022 and 6 days across October, November and December 2020 and

January, February and March 2021) confirm very little usage of the Site of the Proposed Development by species listed as of Special Conservation Interest for the relevant SPAs.

Over the course of the 66 hours surveyed, one observation of Light-bellied Brent Geese was made during the 2020/21 winter. On the 28th of November 2020, a peak count of 14 individuals were found feeding on the Site. No records of this species were made during the 2021/22 winter and no LBBG droppings were recorded at the Site during any of the Site visits. This demonstrates that the Site of the Proposed Development is not a significant *ex-situ* feeding Site for LBBG. The only other SCI recorded on the Site was Black-headed Gull; recorded loafing about on the site in low numbers (Peak count of 43 on 24/01/2022).

Table 6 summarises the peak counts of all relevant species recorded on site during the surveys, and compares this with their respective 1% national and international population estimates. These 1% national and international population estimate figures are taken from Lewis *et al.* (2019). National figures from Lewis *et al.* (2019) are based on records from the Irish Wetland Bird Survey (I-WeBS), a scheme that is funded by the National Parks and Wildlife Service of the Department of Culture, Heritage & the Gaeltacht and that is co-ordinated by BirdWatch Ireland; and international figures are based on records from Wetlands International (2012 & 2018).

Table 6: Summary of peak counts of all relevant SCI species across the survey period, and respective 1% national and international population estimates.

Species	Peak Count	Date	1% National Population	1% International Population
Light-bellied Brent Geese	14	28/11/2020	350	400
Black-headed Gull	43	24/01/2022	n/a*	31,000

*= I-WeBS typically does not record gull species sufficiently in order to be able to generate accurate 1% national figures. Gulls are widely distributed during winter and are not monitored routinely during I-WeBS so standard methods of population estimation and threshold setting cannot be applied. Gull species are therefore not assigned 1% thresholds but rather a 'threshold of significance' is applied that relates to the known most important sites for the species in question (Crowe, 2005). In the case of Black-headed Gull the current threshold of significance is 1,000 (after Crowe, 2005).

Although there is some potential feeding habitat for waterfowl and shorebird species at the Site in the form of the amenity grassland present, little to no usage of the Site was recorded during the two winters it was surveyed. It is noted that the Site is not located in close proximity to the coast and also experiences frequent disturbance in the form of humans passing through the Site walking or with dogs. As such, it is unlikely that the Site will be used regularly if at all by any SCI species other than Gull species. LBBG were only recorded feeding on the Site

once in winter 2020/21 and the lack of visual records or droppings since then indicate that it is not regularly used as an important feeding Site by the Brent Geese.

The only gull species recorded at the Site that is an SCI for the SPAs located within 15km of the Site was Black-headed Gull; recorded loafing about on the site in low numbers (Peak count of 43 on 24/01/2022). It is noted that the highest peak count recorded at the Site of 43 Black-headed Gull on one occasion is not deemed to be significant in terms of overall population numbers. As mentioned above the current threshold of significance for Black-headed Gull is 1,000 (Crowe, 2005). The South Dublin Bay and River Tolka Estuary SPA and North Bull Island SPA are designated as SPAs due in-part to the fact they supports nationally important numbers of wintering waterbird species including 3,040 and 2,196 Black-headed Gull respectively (NPWS, 2015; NPWS 2014). It is therefore concluded that there will be no loss of any important *ex-situ* foraging/roosting habitat, to any of the SCI species listed for the relevant SPAs, as a result of the Proposed Development.

Other than Black-headed Gulls which were present on all counts, SCI species were noted in flight over the Site on just two occasions (Light-bellied Brent Geese and Oystercatcher) and no significant flight path was observed to be consistently in use over the Site. A lone occurrence of 230 LBBG recorded in January 2022 and a single Oystercatcher in March 2022 were the only SCI waterfowl species recorded in flight over the Site. It is noted that the Proposed Development heights of 5-7 storeys will also not impact on the aforementioned species in terms of in-flight collisions.

Based on initial Site assessment/observations, expert opinion, and the findings of the survey itself; it is our considered professional opinion that the Site of the Proposed Development is not currently utilised in any significant manner by SCI species listed for the relevant SPAs. It is also does not currently represent an important flyway for SCI species. Therefore, it is deemed that the Proposed Development will not have any significant adverse effects on these species in terms of *ex-situ* habitat loss, or flight-line obstruction going forward.

1. INTRODUCTION

1.1 Purpose of the Report

Ash Ecology and Environmental Ltd (AEE) were commissioned to carry out a series of bat emergence and activity surveys on behalf of on behalf of Enviroguide Consulting for their client Dublin City Council (DCC).

The development site is bounded to the north by Emmet Road, to the south by Goldenbridge cemetery to the east by the former Richmond Barracks and the pedestrian link to the Bulfin estate next to Saint Michael's Church and to the west by Saint Vincent Street West.

The development will comprise 578 no. apartments, consisting of 110 no. studio apartments, 172 no. 1 bedroom apartments, 250 no. 2 bedroom apartments (including 10 no. duplex apartments) and 46 no. 3 bedroom apartments (all apartments to have balconies or terraces), community facilities Library/Community Hub, Creche, Supermarket, 5 no. units (retail/café/restaurant/class 2 financial services floorspace) & 2 no. Café/restaurant units), a public plaza fronting onto Emmet Road and the installation of a new watermain c 200m in length along Emmet Road to the junction with Tyrconnell Road/Grattan Crescent. The proposal includes works to a protected structure (8705 - Richmond/Keogh Barracks, relating to works to rubble stone boundary wall).

The overall site comprise 4.68 hectares (including watermain upgrade along Emmet Road) and the main development site comprises 3.72 hectares consisting of the now demolished Saint Michael's Estate housing development, see Figure 1 for site location. An aerial photo with existing layout and surrounding landscape is shown as Figure 2.

As the buildings onsite are to be demolished a series of bat surveys were required which took place during July 2020 and July 2022. A bat survey was also carried out in July 2020 to assess the Goldenbridge Cemetery to the south boundary of the site for usage by bats via the perimeter (assess not permitted at night for health and safety reasons).

1.2 Competency of Assessor

This report has been prepared by Ash Ecology & Environmental Ltd (AEE) whose managing director and leading ecologist is Aisling Walsh who is a full member of the Chartered Institute of Ecological & Environmental Management (CIEEM) while the company, AEE, is a Registered Practice by the CIEEM. Aisling's qualifications include M.Sc. (Dist) in Biodiversity and Conservation (TCD) and B.Sc. (Hons) Zoology (NUIG), a diploma in Applicated Aquatic Science (GMIT) and a Certificate in Applied Biology (GMIT). Aisling has over 15 years of experience providing environmental consultancy and environmental assessment services. Aisling has written numerous Ecological Impact Assessments (EcIA), Screening for Appropriate Assessment Stage I and Stage II Natura Impact Statements, chapters for Environmental Impact Assessments/Statements (EIAR), Badger Surveys, Bat Surveys, Bird and Habitat Surveys.

Aisling is a licenced bat ecologist (example of recent: DER/BAT 2020 – 46 EUROPEAN, DER/BAT 2020 – 48 EUROPEAN, DER/BAT 2021 – 89 EUROPEAN, DER/BAT 2022 – 12 EUROPEAN)and a member of Bat Conservation Ireland. In addition she has completed several bat courses to continue her training and CPD with the most recently (May 2021) a Lantra-accredited course, developed by the Bat Conservation Trust and supported by the Arboricultural Association to access bat tree roost features. Over the past 15 years Aisling has completed 100s of bat surveys providing her with more than adequate experience in the profession.

1.3 Bat Legislation

All bat species are protected under the Wildlife Act 1976 to 2021 which make it an offence to wilfully interfere with or destroy the breeding or resting place of these species; however, the Acts permit limited exemptions for certain kinds of situations.

Section 23 of the Wildlife Act 1976 to 2021 contains several exemptions to the protection given to the species listed for protection on Schedule 5 (e.g. for agriculture or construction). In 2005 a further amendment through the European Communities (Natural Habitats) (Amendment) Regulations 2005 (S.I. No. 378 of 2005) removed all of the exemptions provided in Section 23(7) of the Wildlife Act 1976 to 2021 insofar as they relate to Annex IV species, including all species of bats. Those 2005 Regulations were revoked in 2011 except for Regulation 2 which brings about this strengthened protection for bats (and other Annex IV species). All species of bats in Ireland are listed on Schedule 5 of the 1976 Act, and are therefore subject to the provisions of Section 23, which make it an offence to:

- Intentionally kill, injure or take a bat;
- Wilfully interfere with the breeding or resting place of a bat

The Council Directive 92/43/EEC of 21 May 1992 on the Conservation of Natural Habitats and of Wild Fauna and Flora ("the Habitats Directive") seeks to protect rare and vulnerable species, including all species of bats, and their habitats and requires that appropriate monitoring of populations be undertaken. All species of bat found in Ireland are listed on Annex IV of the Directive. Member States are required to put in place a system of strict protection (as outlined in Article 12) for species listed on Annex IV ('European protected species'). The lesser horseshoe bat is further protected under Annex II. This Annex relates to the designation of Special Areas of Conservation (SACs). The Habitats Directive is transposed into Irish law by the

European Communities (Birds & Natural Habitats Regulations) 2011 (S.I. No. 477 of 2011) ("the Habitats Regulations"). Under the Habitats Regulations (2011), all bat species are listed on the First Schedule and Regulation 51 makes it an offence to:

- Deliberately capture or kill a bat;
- Deliberately disturb a bat particularly during the period of breeding, hibernating or migrating;
- Damage or destroy a breeding site or resting place of a bat;
- Keep, sell, transport, exchange, offer for sale or offer for exchange any bat taken in the wild.

Across Europe, bats are further protected under the Convention on the Conservation of European Wildlife and Natural Habitats (Bern Convention 1982), which, in relation to bats, exists to conserve all species and their habitats. The Convention on the Conservation of Migratory Species of Wild Animals (CMS, Bonn Convention 1979) was instigated to protect migrant species across all European boundaries. EUROBATS (a daughter Agreement under CMS) is of particular relevance in relation to cooperation across international borders for the conservation of bats, many of which are known to migrate long distances. The Irish government has ratified both of these conventions as well as the EUROBATS Agreement.

1.4 Derogation licences

It is an offence, under Regulation 51 of the European Communities (Birds and Natural Habitats) Regulations, 2011 ('the 2011 Regulations') to:

a) Deliberately capture or kill a bat in the wild;
b) Deliberately disturb a bat particularly during the period of breeding, rearing, hibernation and migration;
c) Damage or destroy a bat's breeding site or resting place, or;
d) Keep, transport, sell, exchange, offer for sale or offer for exchange any bat taken in the wild, other than those taken legally before the Habitats Directive before the Habitats Directive was implemented.

A person may apply to the Minister under Regulation 54 of the 2011 Regulations for a derogation licence to carry out one or more of these prohibited activities. But, the Minister may only grant such a derogation licence if three criteria are met.

Firstly the Minister may only grant a derogation licence if it is for one of the following specified reasons listed in Regulation 54:

a) In the interests of protecting wild fauna and flora and conserving natural habitats;
b) To prevent serious damage, in particular to crops, livestock, forests, fisheries and water and other types of property;
c) In the interests of public health and public safety, or for other imperative reasons of overriding public interest, including those of a social or economic nature and the beneficial consequences of primary importance for the environment;
d) For the purpose of research and education, of repopulating and introducing these species and for the breeding operations necessary for these purposes, including the artificial propagation of plats, or;

e) To allow, under strictly supervised conditions, on a selective basis and to a limited extent, the taking or keeping of bats.

Secondly, the Minister may only issue a derogation if there is no alternative to carrying out the prohibited activity. The first aim of the developer, whether from a private company or a public authority, working with professional advice, should be to entirely avoid any potential impact of a proposed development on bats and their breeding and resting places. Alternatives may involve redesigning a development so that bat roosts, and associated commuting routes and feeding areas are kept intact and that bats are not disturbed, for example by inappropriate lighting. It should be noted that the European Commission has a specific understanding of satisfactory alternative solution. "An alternative solution cannot be deemed unsatisfactory merely because it would cause greater inconvenience or compel a change in behaviour" (European Commission, 2021, page 13)[1]. Decisions about what solution is satisfactory must be science-based and should solve the problem of how to strictly protect the bats in light of the development.

Thirdly the Minister may only grant a derogation if it is not detrimental to the maintenance of the populations of bats at a favourable conservation status (FCS) in their natural range. There is case law from the Court of Justice of the European Union (CJEU) to back this up. One example is the Finnish Wolf Case C-674/17. The ruling establishes that the Member State must "clearly and precisely" identify in the derogation what the objectives of the derogation are. It must also establish that the derogation is capable of achieving those objectives and demonstrate that there is no satisfactory alternative. Cumulative effects of derogations must be taken into account when issuing derogations. The maximum number of all derogations must not be detrimental to the maintenance or restoration of the population at FCS. Consideration must be given to other human causes of mortality. Any risk to FCS must be ruled out by detailed conditions based on the level of population, its conservation status and its biological characteristics. The conditions must be precisely defined and they must be monitored to ensure they are implemented.

If any of these three criteria are not satisfied, the Minister cannot issue a derogation licence. It must never be assumed that a derogation licence will automatically be granted.

In summary, it is clear that a developer must first look to avoid all impacts on bats. This may mean looking at alternative solutions and redesigning the project accordingly. If this is not possible, the developer needs to check whether there are grounds to apply for a derogation licence, based on the reasons given in Regulation 54 of the Habitats Regulations. When applying for a derogation licence the developer must clearly state the reason and describe in detail all alternative solutions which were given serious consideration. Any mitigation intended to ensure that there is no impact or minimal impact on the bats must be clearly described in detail, giving examples of how it worked in other places.

If a derogation licence has been refused by the Minister, any aspect of the development for which the derogation licence was sought, must not go ahead, no matter what other permissions are in place.

[1] https://op.europa.eu/en/publication-detail/-/publication/bbc7ace0-27e2-11ec-bd8e-01aa75ed71a1/language-en

A derogation licence is required when on the basis of survey information and specialist knowledge, it appears that:

- The site in question is a breeding site or resting place for bats and/or;
- The proposed activity could impact on a breeding site or resting place of a bat.

No licence is required if the proposed activity is unlikely to result in an offence. The advice given in this document (and see also Mullen et al. 2021)[2] should assist the proponent, or those acting on their behalf, in arriving at a decision on this matter, though it must be recognised that determining whether a particular site is used as a breeding or resting place can be problematic for such mobile animals as bats. Determining whether an activity undertaken near to a roost might impact on that roost (e.g. by removing important flight lines or foraging areas) will also require specialist assessment. Note that if the proposed activity can be timed, organised and carried out so as to avoid committing an offence then no licence is required.

Examples of works that are likely to need a licence because they may result in the destruction of a breeding or resting place and/or disturbance of bats include:

- Demolition of buildings known to be used by bats;
- Conversion of barns or other buildings known to be used by bats;
- Restoration of ruined or derelict buildings;
- Maintenance and preservation of heritage buildings;
- Introduction of artificial lighting inside a roost or near a roost entrance;
- Change of use of buildings resulting in increased ongoing disturbance;
- Removal of trees known to be used by bats;
- Significant alterations to roof voids known to be used by bats. Examples of works that, if carefully planned, may not need a licence include:
- Works near to or at roosts (e.g. re-roofing) if carried out while bats are not present and the access points and roosting area are not affected;
- Remedial timber treatment, carried out with the correct (non-toxic to bats) chemicals while bats are not present.

2. METHODOLOGY

2.1 Information Sources

A desk-based review of information sources was completed. Information contained on the websites of the National Parks and Wildlife Service (NPWS)[3] and the National Biodiversity Data Centre (NBDC)[4] was reviewed. The following publications and websites were also reviewed and consulted:

2.2 Desk Study

2.2.1 Previous Records

A desktop review was carried out to identify the previous records of Bat species within the Proposed Development Site and its environs. The study area occurs in 10km^2 Grid Square O13. The website the NBDC (www.nbdc.ie) was accessed on 09/07/2022 to establish any previous bat records and shown below in Table 1.

[5] https://www.theilp.org.uk/documents/guidance-note-8-bats-and-artificial-lighting/

[6] https://www.batconservationireland.org/wp-content/uploads/2013/09/BCIreland-AA-Guidelines_Version1.pdf

[7] https://www.batconservationireland.org/wp-content/uploads/2013/09/BCIrelandGuidelines_Lighting.pdf

Table 1 Historical Bat Records in 10km^2 Grid Square O13 (NBDC website www.nbdc.ie accessed 09/07/2022)

Species Name - Common	*Species Name - Latin*	Last Documented Record O13
Brown Long-eared Bat	*Plecotus auritus*	25/05/2020
Daubenton's Bat	*Myotis daubentonii*	25/05/2020
Leisler's Bat	*Nyctalus leisleri*	08/06/2020
Nathusius's Pipistrelle	Pipistrellus nathusii	25/05/2020
Natterer's Bat	Myotis nattereri	25/05/2020
Common Pipistrelle	*Pipistrellus pipistrellus*	03/08/2013
Soprano Pipistrelle	*Pipistrellus pygmaeus*	25/05/2020
Whiskered Bat	Myotis mystacinus	13/08/2007

2.2.2 *Species Background*

Ireland had ten known bat species until February 2013, when a single live greater horseshoe bat (*Rhinolophus ferrumequinum)* was found roosting in Co. Wexford[8]. On 8th June 2020, a single audio recording was confirmed in the Glendaough area, Co. Wicklow. It was found on two more occasions in the same area in early July 2020 (Bat Conservation Ireland, July 2020).

The ten species (excluding the greater horseshoe) are briefly described overleaf. For a more comprehensive overview see McAney, 2006.[9]

The dependence of Irish bat species on insect prey has left them vulnerable to habitat destruction, land drainage, agricultural intensification and increase use of pesticides. Also, their reliance on buildings as roosting sites has made them particularly vulnerable to renovation works and the use of timber chemical treatment. Buildings are highly important as roosting sites for bats and all Irish bat species use buildings for all roost types. Most significant in terms of roosts in houses are maternity roosts, but cellars and even attics may serve as hibernation sites for bats. Roosts within buildings can far exceed the numbers encountered in trees, bridges, caves or cliffs and roosts of over 1,000 bats have been recorded in buildings.[10]

2.2.2.1 Family Vespertilionidae:

Common pipistrelle *Pipistrellus pipistrellus*
This species was only recently separated from its sibling, the soprano or brown pipistrelle P. pygmaeus[11], which is detailed below. The common pipistrelle's echolocation calls peak at 45 kHz. The species forages along linear landscape features such as hedgerows and treelines as well as within woodland.

Soprano pipistrelle *Pipistrellus pygmaeus*
The soprano pipistrelle's echolocation calls peak at 55 kHz, which distinguishes it readily from the common pipistrelle on detector. The pipistrelles are the smallest and most often seen of our bats, flying at head height and taking small prey such as midges and small moths. Summer roost sites are usually in buildings, but tree holes and heavy ivy are also used. Roost numbers can exceed 1,500 animals in mid-summer.

Nathusius' pipistrelle *Pipistrellus nathusii*
Nathusius' pipistrelle is a recent addition to the Irish fauna and has mainly been recorded from the north-east of the island in Counties Antrim and Down[12] and also in Fermanagh, Longford and Cavan. It has also recently been recorded in Counties Cork and Kerry.[13] However, the known resident population is enhanced in the autumn months by an influx of animals from Scandinavian countries. The status of the species has not yet been determined.

Leisler's bat *Nyctalus leisleri*
This species is Ireland's largest bat, with a wingspan of up to 320mm; it is also the third most common bat, preferring to roost in buildings, although it is sometimes found in trees and bat boxes. It is the earliest bat to emerge in the evening, flying fast and high with occasional steep dives to ground level, feeding on moths, caddisflies and beetles. The echolocation calls are sometimes audible to the human ear being around 15 kHz at their lowest. The audible chatter from their roost on hot summer days is sometimes an aid to location. This species is uncommon in Europe and as Ireland holds the largest national population the species is considered as Near Threatened here.

Brown long-eared bat *Plecotus auritus*
This species of bat is a 'gleaner', hunting amongst the foliage of trees and shrubs, and hovering briefly to pick a moth or spider off a leaf, which it then takes to a sheltered perch to consume. They often land on the ground to capture their prey. Using its nose to emit its echolocation, the long-eared bat 'whispers' its calls so that the insects, upon which it preys, cannot hear its approach (and hence, it needs oversize ears to hear the returning echoes). As this is a whispering species, it is extremely difficult to monitor in the field as it is seldom heard on a bat detector. Furthermore, keeping within the foliage, as it does, it is easily overlooked. It prefers to roost in old buildings.

[11] Barratt, E. M., Deauville, R., Burland, T. M., Bruford, M. W., Jones, G., Racey, P. A., & Wayne, R. K. (1997) *DNA Answers the Call of Pipistrelle Bat Species. Nature* 387: 138 - 139.
[12] Richardson, P. (2000) *Distribution Atlas of Bats in Britain and Ireland 1980 - 1999*. The Bat Conservation Trust, London, England.
[13] Kelleher, C. (2005) *International Bat Fieldcraft Workshop, Killarney, Co. Kerry*. National Parks and Wildlife Service, Department of the Environment, Heritage and Local Government.

Natterer's bat *Myotis nattereri*
This species has a slow to medium flight, usually over trees but sometimes over water. It usually follows hedges and treelines to its feeding sites, consuming flies, moths, caddisflies and spiders. Known roosts are usually in old stone buildings but they have been found in trees and bat boxes. The Natterer's bat is one of our least studied species and further work is required to establish its status in Ireland.

Daubenton's bat *Myotis daubentonii*
This bat species feeds close to the surface of water, either over rivers, canals, ponds, lakes or reservoirs but it can also be found foraging in woodlands. Flying at 15 kilometres per hour, it gaffs insects with its over-sized feet as they emerge from the surface of the water - feeding on caddis flies, moths, mosquitoes, midges etc. It is often found roosting beneath bridges or in tunnels and also makes use of hollows in trees.

Whiskered bat *Myotis mystacinus*
This species, although widely distributed, has been rarely recorded in Ireland. It is often found in woodland, frequently near water. Flying high, near the canopy, it maintains a steady beat and sometimes glides as it hunts. It also gleans spiders from the foliage of trees. Whiskered bats prefer to roost in buildings, under slates, lead flashing or exposed beneath the ridge beam within attics. However, they also use cracks and holes in trees and sometimes bat boxes. The whiskered bat is one of our least studied species and further work is required to establish its status in Ireland.

Brandt's bat *Myotis brandtii*
This species is known from five specimens found in Counties Wicklow (Mullen, 2007), Cavan, and Clare in 2003, a specimen in Kerry in 2005[14] and another in Tipperary in 2006.[15] No maternity roosts have yet been found. It is very similar to the whiskered bat and cannot be separated by the use of detectors. Its habits are similar to its sibling.

2.2.2.2 Family Rhinolophidae:

Lesser horseshoe bat *Rhinolophus hipposideros*

This species is the only representative of the Rhinolophidae or horseshoe bat family in Ireland. It differs from our other species in both habits and looks, having a unique nose leaf with which it projects its echolocation calls. It is also quite small and, at rest, wraps its wings around its body. Lesser horseshoe bats feed close to the ground, gleaning their prey from branches and stones. It often carries its prey to a perch to consume, leaving the remains beneath as an indication of its presence.

The echolocation call of this species is of constant frequency and, on a heterodyne bat detector, sounds like a melodious warble. The species is confined to six counties along the Atlantic seaboard: Mayo, Galway, Clare, Limerick, Kerry and Cork. The current Irish national population is estimated at 12,500 animals. This species is listed on Annex II of the EC Habitats Directive and 41 Special Areas of Conservation have

[14] Kelleher, C. 2006a Nathusius pipistrelle Pipistrellus nathusii and Brandt's Bat Myotis brandtii - New Bat Species to Co. Kerry – Irish Naturalists' Journal 28: 258.
[15] Kelleher, C. 2006b Brandt's Bat Myotis brandtii, New Bat Species to Co. Tipperary. Irish Naturalists' Journal 28: 345.

been designated in Ireland for its protection. Where it occurs, it is often found roosting within farm buildings.

2.2.3 Landscape Suitability

The National Biodiversity Data Centre (NBDC) maps landscape suitability bats based on Lundy *et al.* (2011). The maps are a visualisation of the results of the analyses based on a 'habitat suitability' index. The index ranges from 0 to 100 with 0 being least favourable and 100 most favourable for bats. On average for all bat species the highest range is between 36.44 - 58.56. The overall assessment of bat habitats for the current study area is given as '18.33', deemed 'Low' by the author.

Table 2 gives the suitability of the study area for the bat species found in the study area (based on NBDC) along with their Irish Red List Status (from Marnell *et al.*, 2019).[16]

Table 2 Suitability of the study area for the bat species found in the Dublin 8 (based on the NBDC data) with Irish Red list status indicated.

Common name	Scientific name	Suitability index	Irish red list status
All bats	-	18.33	Least Concern
Soprano pipistrelle	*Pipistrellus pygmaeus*	33	Least Concern
Brown long-eared bat	*Plecotus auritus*	23	Least Concern
Common pipistrelle	*Pipistrellus pipistrellus*	31	Least Concern
Lesser-horseshoe bat	*Rhinolophus hipposideros*	0	Least Concern
Leisler's bat	*Nyctalus leisleri*	37	Least Concern
Whiskered bat	*Myotis mystacinus*	13	Least Concern
Daubenton's bat	*Myotis daubentonii*	11	Least Concern
Nathusius' pipistrelle	*Pipistrellus nathusii*	10	Least Concern
Natterer's bat	*Myotis nattereri*	7	Least Concern

2.2.4 Bat Roosts

Bats were originally cave and tree dwelling animals but many now find buildings just as suitable for their needs. Bats are social animals and most species congregate in large colonies during summer. These colonies consist mostly of females of every reproductive class, with some juvenile males from the previous year. Male bats normally roost individually or in small groups meeting up with the females in the late autumn-early winter, when it is time to mate. In summer, bats seek warm dry buildings in which they can give birth and suckle their young. In winter, they seek out places with a constant low temperature and high humidity where they can become torpid and hibernate during adverse weather conditions. However, bats do not hibernate continuously during winter and will awake and hunt during mild nights when there are insects available, and it is energetically advantageous to forage.

[16] Marnell, F., Looney, D. & Lawton, C. (2019) Ireland Red List No. 12: Terrestrial Mammals. National Parks and Wildlife Service, Department of the Culture, Heritage and the Gaeltacht, Dublin, Ireland.

2.2.4.1 Maternity Roosts

Maternity roosts are the most significant roosts and they are predominantly all-female aggregations that are formed from late May onwards and remain as a relatively cohesive unit until mid to late August. Not all female bats give birth annually. These females that do bear young in a given year avail of a suitable building, tree and sometimes cave (or equivalent). The young are flightless for several weeks and hence are vulnerable to dangers such as tree felling and restoration, reinforcement or demolition of structures such as buildings and bridges.

2.2.4.2 Mating Roosts

Most bat species mate in autumn but pregnancy does not occur until the following spring. During this time males will take possession of a cavity in a building, tree, bridge, cave or mine and attract females to these sites to establish a harem. Male bats call both from a perch and in flight in much the same manner that male birds sing.

2.2.4.3 Hibernation Roosts

Bats have a high metabolic rate and in temperate countries, such as Ireland, flying insects are not available in sufficient numbers during winter to sustain bats. Therefore, bats hibernate during winter. In hibernation sites, bats are often completely inactive for several days and are extremely vulnerable to disturbance by human activities due to the time taken for them to become sufficiently active to allow escape. Hibernation may extend from November to the end of March, during which time bat activity will take place sporadically.

2.2.4.4 Night Roosts

These are roosts which are used as resting places for bats between foraging bouts. They also provide retreats for bats from predators or during inclement weather conditions. They also function as feeding perches and may be important for socialising.

2.3 Bat Survey Methodology

The guidance used for the bat emergence surveys and activity surveys followed Marnell et al (2022)[17] for the July 2022 survey and the older 2006[18] guidelines for surveys in 2020. The Bat Conservation Trust (2016)[19] Guidelines were used in both July 2020 and July 2022.

[17] Marnell, F., Kelleher, C. & Mullen, E. (2022) Bat mitigation guidelines for Ireland v2. Irish Wildlife Manuals, No. 134. National Parks and Wildlife Service, Department of Housing, Local Government and Heritage, Ireland.

[18] Kelleher, C. & Marnell, F. (2006) Bat Mitigation Guidelines for Ireland. Irish Wildlife Manuals, No. 25. National Parks and Wildlife Service, Department of Environment, Heritage and Local Government, Dublin, Ireland.

[19] The Bat Conservation Trust (2016) Bat Surveys for Professional Ecologists: Good Practice Guidelines 3rd edition

There are three main structures onsite which were surveyed (Labelled 1, 2 and 3 as per Figures 3-6.). Building 1 and 2 are for demolition. Building 3 will be retained and unaffected.

A bat emergence survey of the 3 No. existing buildings onsite was carried out on the 23rd of July 2020 (21.00 to 23.30, sunset 21.34, temperature 15°C in calm dry conditions) and 7th July 2022 (21.00 to 23.30, sunset 21.31, temperature 22-23°C in dry calm conditions) for the subject site (see Figure 2), while a general bat activity survey around the perimeter of the Goldenbridge Cemetery was carried out on 25th July 2020 (21.20 to 23.30, sunset 21.53, temperatures 15-17°C in dry calm conditions).

The equipment used included an Elekon Bat Logger M detector and heterodyne SSF Bat2 Detector. Visual observations were taken with the aid of a powerful L.E.D. torch (AP Pros-Series 220 Lumens High Performance Spotlight).

A Seek Thermal Reveal Pro High-Resolution Thermal Imaging Camera, along with a RIDGID 36848 Micro CA-150 Hand-Held Borescope was available for any inspection of any crevices/roof spaces on the affected Building 1 and 2 (where accessible). The borescope is fitted with a camera and allows visibility of confined spaces and narrow passages potentially used by hibernating/roosting bats. It allows spaces up to 3m from ground level to be inspected. All spaces that could potentially allow bats access the buildings were visually examined in detail for bats, signs of bats, or evidence of bat activity, using a torch where necessary. Cracks, crevices etc. were investigated for ingress / egress points and evidence of bat habitation, such as prey items, smearing lines, droppings, and staining. The floors, window sills, and other elevated surfaces were examined closely for droppings. The interior of Buildings No. 2 and No. 3 was also checked for bat signs. Building 1 was not accessible inside.

The BCT guidelines were followed for the assessment rating[20] and classified using Table 4.1 of the BCT guidelines (2016) which is shown as Table 3 overleaf.

The results were used to grade the 3 No. existing buildings as having Negligible, Low, Moderate, or High suitability for roosting bats in accordance with Bat Conservation Trust guidelines[21], see Table 3. Building 3, while not affected, was graded for completeness.

General Site photos are contained in Appendix A from July 2020 and July 2022.

[20] *Bat Surveys for Professional Ecologists, Good Practice Guidelines (2016)*
[21] Collins, J. (ed.) (2016) Bat Surveys for Professional Ecologists: Good Practice Guidelines (3rd edn).

Table 3 Guidelines for assessing the potential suitability of proposed development sites for bats, based on the presence of roost features within the landscape, to be applied using professional judgement.

Suitability	Description Roosting habitats	Commuting and foraging habitats
Negligible	Negligible habitat features on site likely to be used by roosting bats.	Negligible habitat features on site likely to be used by commuting or foraging bats.
Low	A structure with one or more potential roost sites that could be used by individual bats opportunistically. However, these potential roost sites do not provide enough space, shelter, protection, appropriate conditions[a] and/or suitable surrounding habitat to be used on a regular basis or by larger numbers of bats (i.e. unlikely to be suitable for maternity or hibernation[b]). A tree of sufficient size and age to contain PRFs but with none seen from the ground or features seen with only very limited roosting potential.[c]	Habitat that could be used by small numbers of commuting bats such as a gappy hedgerow or unvegetated stream, but isolated, i.e. not very well connected to the surrounding landscape by other habitat. Suitable, but isolated habitat that could be used by small numbers of foraging bats such as a lone tree (not in a parkland situation) or a patch of scrub.
Moderate	A structure or tree with one or more potential roost sites that could be used by bats due to their size, shelter, protection, conditions[a] and surrounding habitat but unlikely to support a roost of high conservation status (with respect to roost type only – the assessments in this table are made irrespective of species conservation status, which is established after presence is confirmed).	Continuous habitat connected to the wider landscape that could be used by bats for commuting such as lines of trees and scrub or linked back gardens. Habitat that is connected to the wider landscape that could be used by bats for foraging such as trees, scrub, grassland or water.
High	A structure or tree with one or more potential roost sites that are obviously suitable for use by larger numbers of bats on a more regular basis and potentially for longer periods of time due to their size, shelter, protection, conditions[a] and surrounding habitat.	Continuous, high-quality habitat that is well connected to the wider landscape that is likely to be used regularly by commuting bats such as river valleys, streams, hedgerows, lines of trees and woodland edge. High-quality habitat that is well connected to the wider landscape that is likely to be used regularly by foraging bats such as broadleaved woodland, tree-lined watercourses and grazed parkland. Site is close to and connected to known roosts.

[a] For example, in terms of temperature, humidity, height above ground level, light levels or levels of disturbance.
[b] Evidence from the Netherlands shows mass swarming events of common pipistrelle bats in the autumn followed by mass hibernation in a diverse range of building types in urban environments (Korsten *et al.*, 2015). This phenomenon requires some research in the UK but ecologists should be aware of the potential for larger numbers of this species to be present during the autumn and winter in large buildings in highly urbanised environments.
[c] This system of categorisation aligns with BS 8596:2015 Surveying for bats in trees and woodland (BSI, 2015).

2.4 Bat Roost Potential Tree Assessment

Trees that may provide a roosting space for bats were classified using the Bat Tree Habitat Key (BTHK, 2018)[22] and the classification system adapted from Collins (2016). The Potential Roost Features (PRFs) listed in BTHK (2018) were used to determine the PBR value of trees, see Table 4. Consideration was also given to the classification of trees according to the British Standard BS8956 - Surveying for bats in trees and woodland, see Table 5.

Trees, if identified as Potential Bat Roosts, were inspected during the daytime, where possible, for evidence of bat usage. Evidence of bat usage is in the form of actual bats (visible or audible), bat droppings, urine staining, grease marks (oily secretions from glands present) and claw marks. In addition, the presence of bat fly pupae (bat parasite) also indicated that bat usage of a crevice, for example, has occurred in the past.

[22] BTHK (2018) Bat Roosts in Trees – A Guide to Identification and Assessment for Tree-Care and Ecology Professionals. Exeter: Pelagic Publishing.

A Phase 1 inspection was undertaken to make a list of trees within the proposed development site that may be suitable as roosting sites for bats. Inspections were undertaken visually with the aid of a strong torch beam (AP Pros-Series 220 Lumens High Performance Spotlight) and Celestron12x56 Prism Binoculars during the daytime searching for PRFs, if visible. To aid this Phase 1 inspection, tree reports, where available, were consulted to supplement the data collected. A RIDGID 36848 Micro CA-150 Hand-Held Borescope for inspection of any accessible crevices on trees (3m from ground).

General Site photos showing the trees onsite are contained in Appendix A.

During the survey, the features listed below on the affected trees were sought as they may provide suitable roost sites for bats:

- Natural holes (e.g. knot holes) arising from naturally shed branches or branches previously pruned back to a branch collar.
- Man-made holes (e.g. cavities that have developed from flush cuts or cavities created by branches tearing out from parent stems).
- Cracks/splits in stems or braches (horizontal and vertical).
- Partially detached, loose or bark plates.
- Cankers (caused by localised bark death) in which cavities have developed.
- Other hollows or cavities, including butt rots.
- Compression of forks with included bark, forming potential cavities.
- Crossing stems or branches with suitable roosting space between.
- Ivy stems with diameters in excess of 50mm with suitable roosting space behind (or where roosting space can be seen where a mat of thinner stems has left a gap between the mat and the trunk).
- Bat or bird boxes.
- Other suitable places of rest or shelter.

Certain factors such as orientation of the feature, height from the ground, the direct surroundings and its location in respect to other features may enhance or reduce the potential value.

Table 4 Classification and Survey Requirements for Bats in Trees[23]

Classification of Tree	Description of Category and Associated Features (based on Potential Roosting Features listed above)	Likely Further Survey Work / Actions
Confirmed Roost	Evidence of roosting bats in the form of live / dead bats, droppings, urine staining, mammalian fur oil staining, etc.	A National Parks and Wildlife (NPWS) derogation licence application will be required if the tree or roost site is affected by the development or proposed arboricultural works. This will require a combination of aerial assessment by

[23] Bat Surveys for Professional Ecologists: Good Practice Guidelines (J., Collins (Bat Conservation Trust), 2016).

Classification of Tree	Description of Category and Associated Features (based on Potential Roosting Features listed above)	Likely Further Survey Work / Actions
		roped access bat workers (where possible, health and safety constraints allowing) and nocturnal survey during appropriate periods (e.g. nocturnal survey - May to August) to inform on the licence. Works to tree undertaken under supervision in accordance with the approved good practice method statement provided within the licence. However, where confirmed roost site(s) are not affected by works, work under a precautionary good practice method statement may be possible.
High Potential – Category 1	A tree with one or more Potential Roosting Features that are obviously suitable for larger numbers of bats on a more regular basis and potentially for longer periods of time due to their size, shelter protection, conditions (height above ground level, light levels, etc) and surrounding habitat. Examples include (but are not limited to); woodpecker holes, larger cavities, hollow trunks, hazard beams, etc.	Aerial assessment by roped access bat workers (if appropriate) and / or nocturnal survey during appropriate period (May to August). Following additional assessments, tree may be upgraded or downgraded based on findings. If roost sites are confirmed and the tree or roost is to be affected by proposals a licence from the NPWS will be required. After completion of survey work (and the presence of a bat roost is discounted), a precautionary working method statement may still be appropriate.
Moderate Potential – Category 2	A tree with Potential Roosting Features which could support one or more potential roost sites due to their size, shelter protection, conditions (height above ground level, light levels, etc) and surrounding habitat but unlikely to support	A combination of aerial assessment by roped access bat workers and / or nocturnal survey during appropriate period (May to August). Following additional assessments, tree may be upgraded or downgraded based on findings.

Classification of Tree	Description of Category and Associated Features (based on Potential Roosting Features listed above)	Likely Further Survey Work / Actions
	a roost of high conservation status (i.e. larger roost, irrespective of wider conservation status). Examples include (but are not limited to); woodpecker holes, rot cavities, branch socket cavities, etc.	After completion of survey work (and the presence of a bat roost is discounted), a precautionary working method statement may still be appropriate. If a roost site/s is confirmed a licence from the NPWS will be required.
Low Potential – Category 3	A tree of sufficient size and age to contain Potential Roosting Features but with none seen from ground or features seen only very limited potential. Examples include (but are not limited to); loose/lifted bark, shallow splits exposed to elements or upward facing holes.	No further survey required but a precautionary working method statement may be appropriate.
Negligible/No potential – Category 4	Negligible/no habitat features likely to be used by roosting bats	None.

Table 5 Classification of Trees for Risk of Bat Roost Presence

Tree category and description (following scoping survey)	Secondary (non-specialist) survey recommendations	Secondary (specialist) survey recommendations
Known or confirmed roost	Initially consider if work to tree(s) can be avoided. If not, a specialist bat roost assessment should be undertaken to establish bat species, numbers and the nature of the roost.	
High/medium risk Trees with a suitable potential roost feature, or with several features with some bat roost potential.	• Secondary (non-specialist) assessment to examine potential roost features previously identified. If roosts cannot reasonably be ruled out a bat specialist should be consulted. • Following this assessment the tree could be up-graded or down-graded (see column 1 categories.	• Specialist bat roost assessment should be undertaken if work to a tree cannot be avoided. • Assessment to include techniques such as endoscope use and dusk/pre-dawn surveys should be undertaken. • Following this assessment the tree could be up-graded or down-graded.
Low risk Trees of sufficient size and age to contain bat roosts but with no obvious potential roost features seen during the scoping survey, or features seen with limited roosting potential only, e.g. small amounts of ivy.	No further assessment is required unless sufficient new evidence is found to upgrade the category.	None
Negligible/no risk Trees with apparently no potential to support bats.		
NOTE Risk equates to the likelihood of bat roost presence.		

2.5 Landscape Evaluation

Ecological survey results were evaluated to determine the significance of identified features located in the study area on an importance scale ranging from international-national-county-local (from NRA, 2009) The local scale is approximately equivalent to one 10km square but can be operationally defined to reflect the character of the area of interest. Because most sites will fall within the local scale, this is sub-divided into two categories: local importance (higher value) and local importance (lower value).

3. RESULTS

3.1 Bat Survey

In total three species of bat were detected overall during the three surveys in July 2020 and 2022. The tabulated results are summarized in Table 6, with the complete dataset of bat species identified in real time in the field using the Elekon Batlogger M detector presented in Appendix B.

The visual results of the bat surveys (July 23rd and 25th 2020, and July 7th 2022) are shown as Figures 3, 4 and 5. A merged map of the three surveys, outlining the locations of the bat calls, is shown as Figure 6.

There are three main structures onsite which were surveyed (Labelled 1, 2 and 3 as per Figures 3-6.). Building 1 and 2 will be subject to demolition and Building 3 will be retained and unaffected.

The interior of the affected Building 2 and 3 were inspected as per the methodology set out in Section 2.3. All spaces that could potentially allow bats access into Building 1, 2 and 3 were visually examined in detail for bats, signs of bats, or evidence of bat activity, using a torch where necessary. Cracks, crevices etc. were investigated for ingress / egress points and evidence of bat habitation, such as prey items, smearing lines, droppings, and staining.

Overall (as per Table 3) the Buildings numbered 1 and 2 were assessed as having 'Low' bat suitability with limited access points observed. Both buildings 1 and 2 are currently vacant. Building 3 (Inchicore Community Sports Centre) is currently in use and a modern well sealed building with 'Negligible' bat roost potential. This building will not be affected by works.

Building 1 and 2 had some bat potential e.g. heavy ivy on walls, entry points via old vent holes, wooden soffits (Building 1), however given the high levels of city street lighting and limited foraging and commuting habitat, together with no bat emergence on the nights of surveys, it is unlikely bats are using these buildings. In addition the interior of Building 2 revealed no signs of bats to the interior.

It was noted Goldenbridge Cemetery (outside the site but adjacent to the south boundary) has mature trees with potential roost features (PRFs) and so is considered to be 'Low' to 'Moderate', however is mainly an ecological island in the city setting. Bat activity was low on all survey nights carried out in both July 2020 and July 2022, despite optimal weather conditions. The activity survey in July 2022 focused mainly on the eastern area of the site where the buildings are located (for health and safety reasons as advised by DCC personnel).

In conclusion the subject site had low levels of bat activity despite optimal weather while the cemetery had low to moderate levels with the majority in the southeast corner of the Goldenbridge Cemetery which is not within the development site.

Table 6 Bat Results Summary Data from three Survey Dates – July 23rd 2020, July 25th 2020 and July 7th 2022

Species Name - Common	Species Name - Latin	Number of Occurrences	Peak Frequency (kHz)
23/07/2020 - Site			
Leisler's Bat	*Nyctalus leisleri*	2	27
Soprano Pipistrelle	*Pipistrellus pygmaeus*	1	56
07/07/2022 - Site			
Leisler's Bat	*Nyctalus leisleri*	4	27
Soprano Pipistrelle	*Pipistrellus pygmaeus*	1	56
25/07/2021 – Goldenbridge Cemetery			
Common Pipistrelle	*Pipistrellus pipistrellus*	3	46
Leisler's Bat	*Nyctalus leisleri*	2	27
Soprano Pipistrelle	*Pipistrellus pygmaeus*	7	56

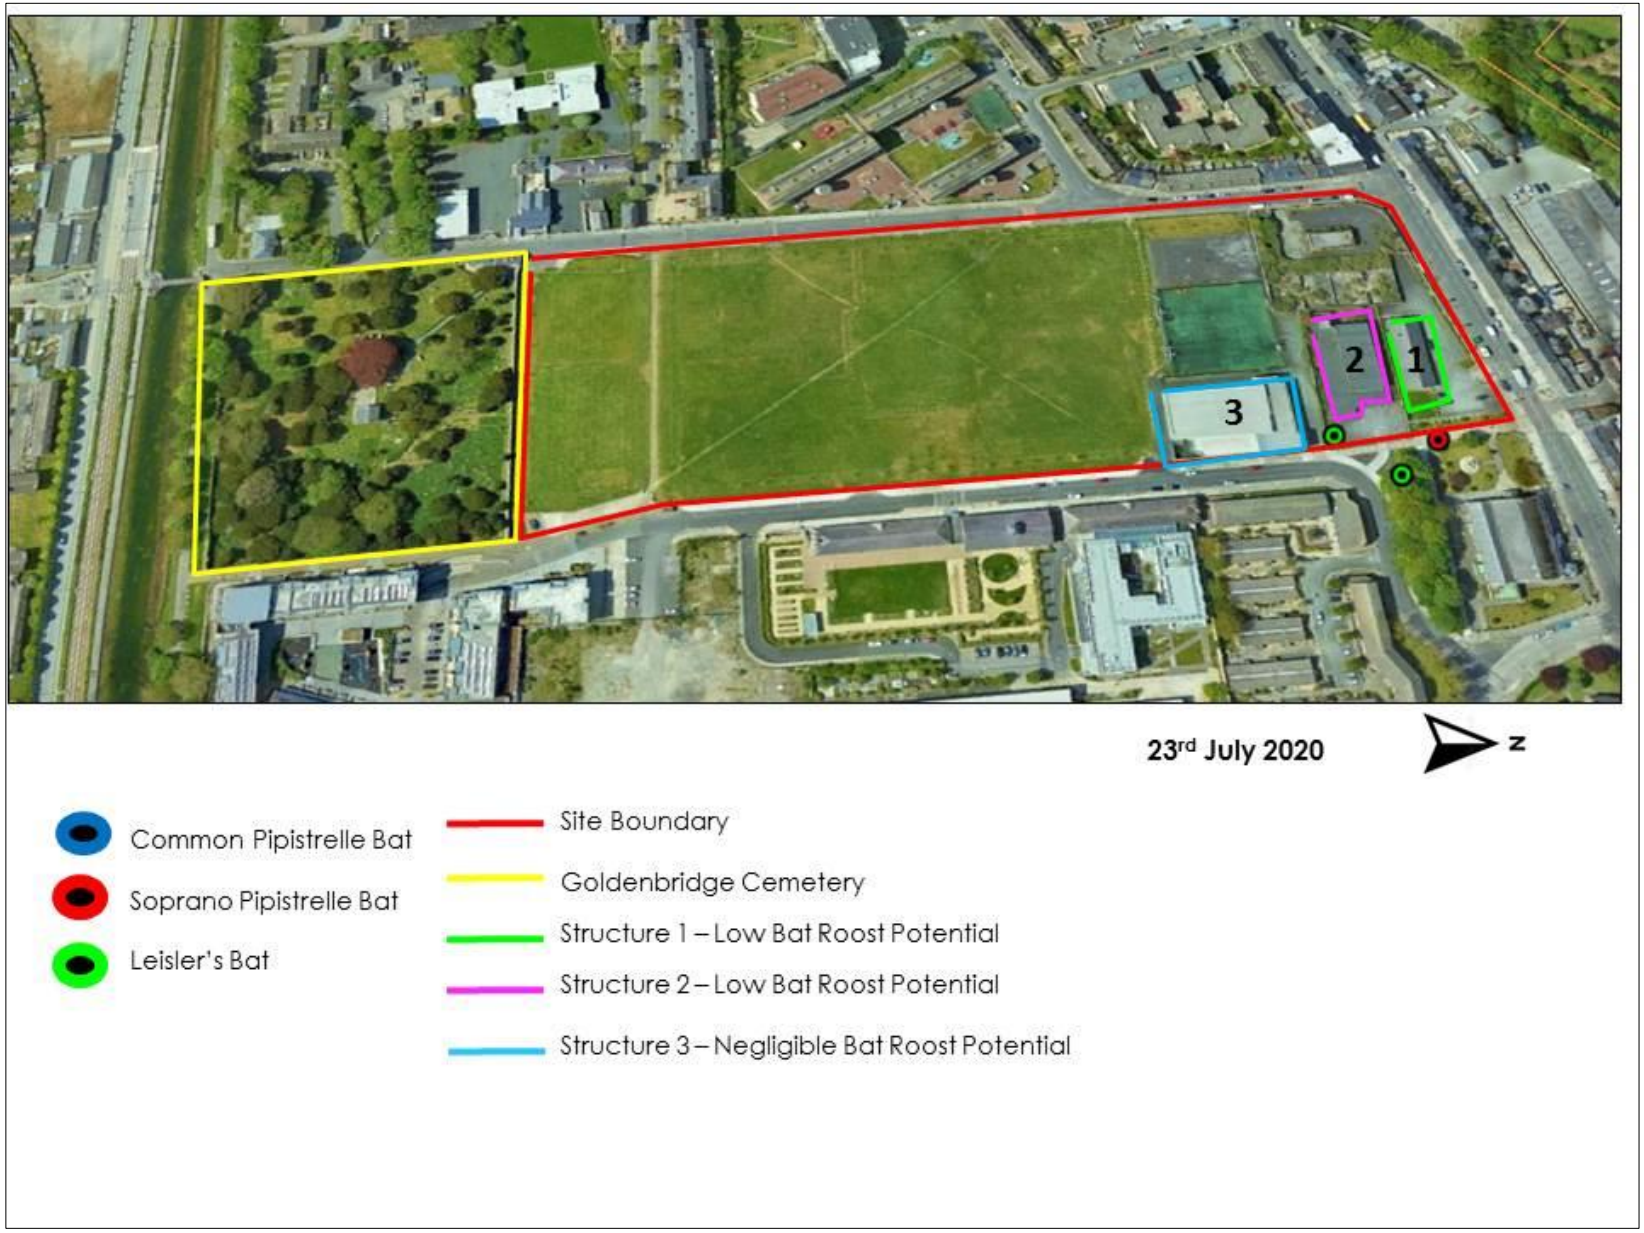

Figure 3 Bat Results with Legend – July 23rd 2020

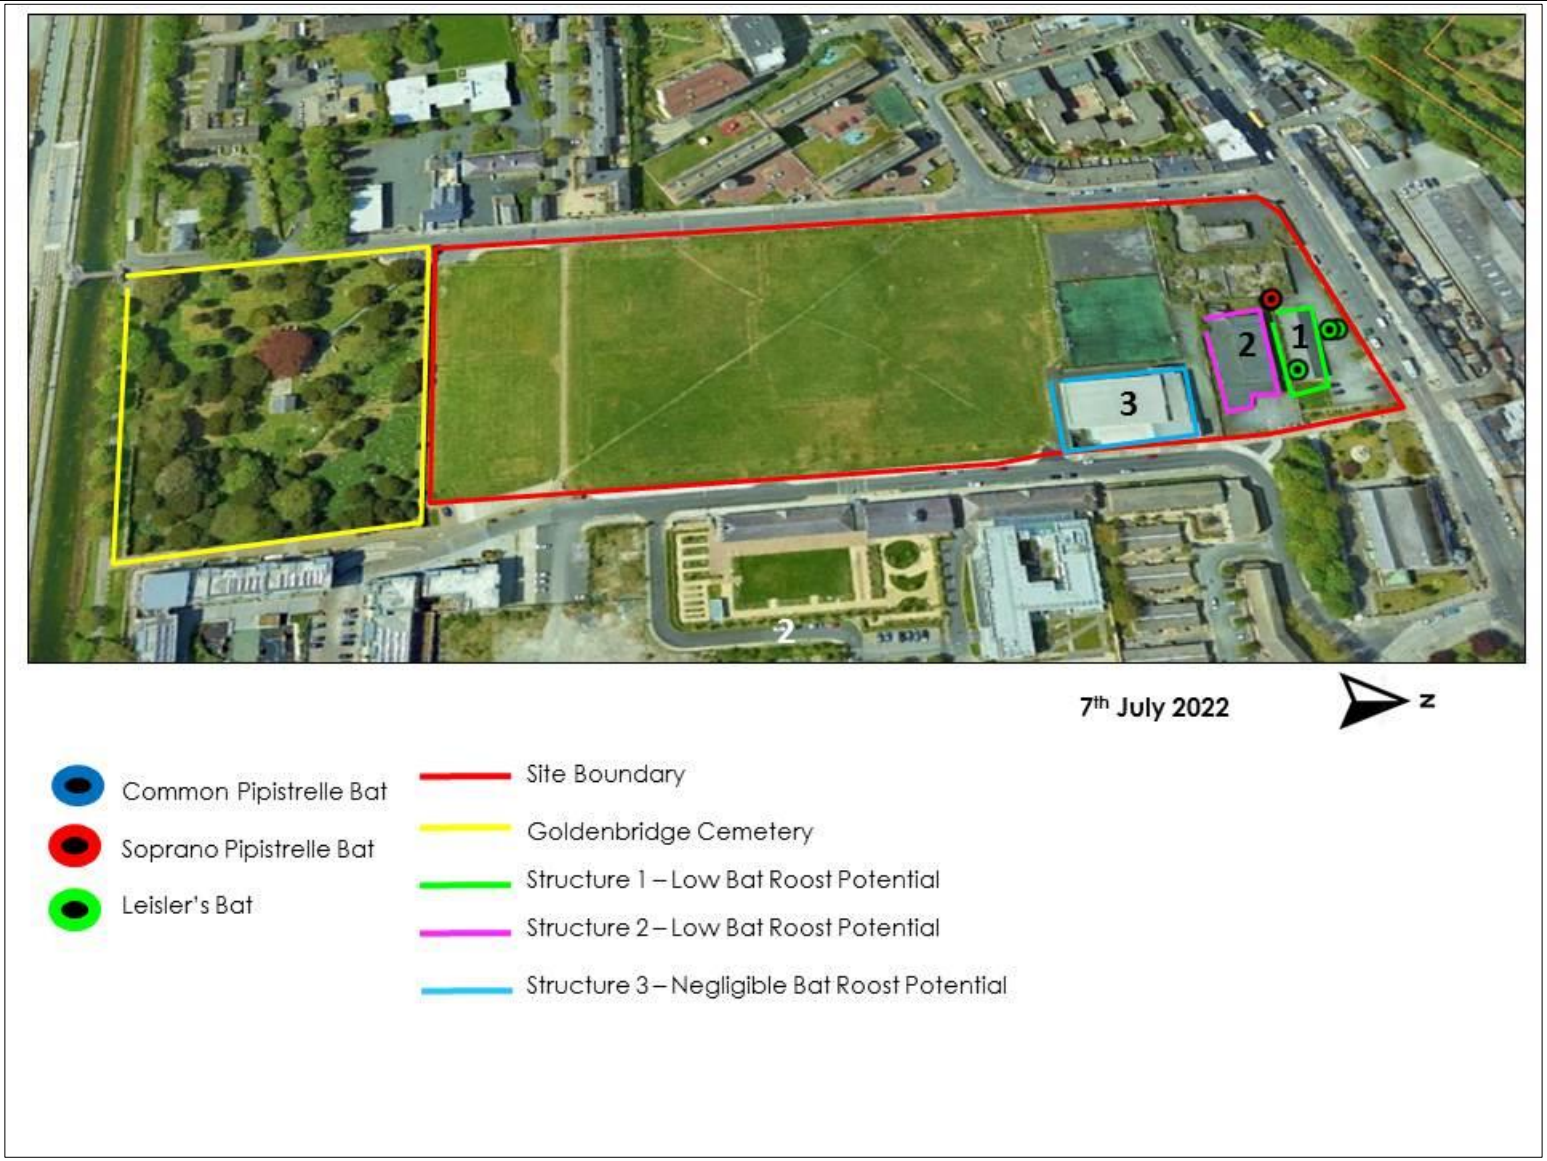

Figure 5 Bat Results with Legend – July 7th 2022

Figure 6 Bat Results Combined – July 23rd 2020, July 25th 2020 and July 7th 2022

3.2 Bat Potential Tree Assessment

Trees affected by the development are semi-mature. There are no mature trees present. All semi mature trees and areas of scrub were assessed as having negligible bat roost potential (see Tables 3 and 4) due to a lack of features such as heavy ivy, holes, crevices, bark splits and peeling bark. It is therefore surmised all trees onsite are assessed as having 'Negligible' bat roost potential (see Tables 3 and 4) and 'No Risk' for affecting bat roosts (see Table 5).

3.3 Landscape Evaluation

The landscape is considered of local importance (lower value) for bats at the subject site and of local importance (higher value) at the Goldenbridge Cemetery due to tree cover in this location and the network of mature treelines along with the Grand Canal giving a continuous treeline foraging route albeit with lighting which will discourage certain species which might account for the low level of bat activity. In that regard the trees and vegetation in and around the site are important as a biodiversity corridor to the wider landscape outside the cityscape.

4. RECOMMENDATIONS

4.1 Lighting for Bats

In order to minimise disturbance to bats utilising the site in general, the lighting and layout of the proposed development should be designed to minimise light-spill onto habitats used by the local bat population foraging or commuting. This can be achieved by ensuring that the design of lighting accords with guidelines presented in the Bat Conservation Trust & Institute of Lighting Engineers *'Bats and Lighting in the UK - Bats and Built Environment Series',* the Bat Conservation Trust *'Artificial Lighting and Wildlife Interim Guidance'* and the Bat Conservation Trust *'Statement on the impact and design of artificial light on bats*'. Therefore, where possible, the lighting scheme should include the following:

- The avoidance of direct lighting of proposed areas of habitat creation / landscape planting, or on trees planted.

- Goldenbridge Cemetery should not have an increase in the current lux level due to the adjacent development.

- Unnecessary light spill controlled through a combination of directional lighting and hooded / shielded luminaires or strategic planting to provide screening vegetation.

- Lights should be of low intensity. It is better to use several low intensity lights than one strong light spilling light across the entire area.

- Narrow spectrum lighting should be used with a low UV component. Glass also helps reduce the UV component emitted by lights.

- The colour rendering of the selected light fitting should be 3000k making the LED fittings a warmer light, helping to further minimize the impact on the local wildlife

- Where lighting is necessary, it shall be of limited height and targeted downwards to prevent overspill.

- Bat boxes should not be illuminated.

4.2 Bat Potential Trees

Trees used for future landscaping should comprise of mainly native Irish species.

4.3 Bat Roosting Opportunities

Due to a lack of mature trees onsite, if possible, the design of some non-residential units should incorporate integrated 5 x Bat Brick[24] over 4m high (if possible) into their south facing walls. The walls in which they are placed should not be illuminated. If this is not possible to integrate bat bricks then 5 x large bat boxes could be placed on the wall exterior.[25] See Appendix C for examples. If no suitable locations for bat boxes are available, 5 no. pole mounted bat boxes should be installed along the southern boundary near Goldenbridge Cemetery[26]. Finally, if there are no suitable locations for bat boxes within the Site, a series of 5 no. bat boxes should be installed on trees in nearby lands owned by Dublin City Council. The recommended boxes are Woodcrete 1FF Bat Boxes[27].

4.4 Further Surveys

While Building 1 and 2 were considered to be of Low bat Roost suitability and there was no emergence from same, a pre-demolition bat survey is recommended if these buildings are knocked between March and October to ensure no bats are present at this time.

5. CONCLUSION

The results of the bat survey showed no bats emerging from any building onsite, specifically Building 1 and 2 which are affected. There was no evidence of bat signs within Buildings 2 (affected) or Building 3 (unaffected). No bat derogation licence is required for this reason. Soprano Pipistrelle and Leisler's Bat were recorded flying over the subject site but not using it. Both these species and Common Pipistrelle were recorded in the Goldenbridge Cemetery area which is more amenable to bats due to the present of mature trees. There are no mature trees on the development site affected, only semi mature trees with no bat roost potential.

27 1FF Schwegler Bat Box With Built-in Wooden Rear Panel | NHBS Practical Conservation Equipment

On the basis of the findings of the survey works it is concluded that the overall impact arising from the proposed works, will most likely be negligible for bats if:

- A bat friendly lighting design is implemented following best practice guidelines. Goldenbridge Cemetery should not have an increase in Lux levels due to the development.
- The design of the proposed development incorporate 5 x integrated Bat Brick, 5 x large bat box placed onto the south facing walls of a selection of non-residential buildings, 5x pole mounted bat boxes at the south of the Site **or** 5 x bat boxes installed in onto trees in nearby lands owned by Dublin City Council in an unilluminated area.
- Works will cease and the NPWS Ranger and AEE contacted if bats are found during renovation works, and a Derogation Licence acquired.

TRACSIS

TRAFFIC DATA

Transport Data Collection and Analytics

Junction Turning Count

Project Number: 3665-IRE
Project Name: Emmet Rd
Client: O' Connor Sutton Cronin Consulting Engineers

Sites: 1-5
Survey Date: 28/04/2022

Survey Time: 07:00-19:00 **Weather:** Dry

Observations: No incidents or observations during the survey period.

Tracsis will retain all personal data relating to this project, including all video images, for a period of three months after receipt of this report and all other data files for one year.

If you would like a copy of the personal data or wish for us to retain for a longer period, please do not hesitate to contact us.

TRACSIS

TRAFFIC DATA

Transport Data Collection and Analytics

Max Queue Analysis by Video Observation

Project Number: 3665-IRE

Project Name: Emmet Rd

Client: O' Connor Sutton Cronin Consulting Engineers

Sites: 1-5

Survey Date: Thursday 28 April 2022

Survey Time: 07:00 - 19:00 **Weather:** Dry

Observations: No incidents or observations during the survey period.

Tracsis will retain all personal data relating to this project, including all video images, for a period of three months after receipt of this report and all other data files for one year.

If you would like a copy of the personal data or wish for us to retain for a longer period, please do not hesitate to contact us.

Queue Methodology

A queue is defined as those vehicles at a junction which are stationary or which have slowed down to walking speed or less. Queues are counted according to the weighting system defined below.

Vehicle	Number	Metres
PC, MC	0.5	2.5
LV	1	5
OGV1	2	10
OGV2	3	15
Bus	3	15

Please note that PC or MC are only recorded as queueing when adding to the length of the queue and those that are stopped abreast with another vehicle will not be counted.

Instances in which there are "+" figures in the queue data represent the longest queue that can be accurately seen. These queues were longer than reported but would have to be estimated if any further vehicles exceeding these limits were reported.

On carriageway with more than 1 lane, each lane is identified with numbers, starting with the lane closest to the kerb (inside lane), which is called "Lane 1". The next lane is numbered sequentially, "Lane 2", "Lane 3" and so forth.

TRACSIS

TRAFFIC DATA

Transport Data Collection and Analytics

Pedestrian Analysis by Video Observation

Project Number: 3665-IRE
Project Name: Emmet Rd
Client: O' Connor Sutton Cronin Consulting Engineers

Sites: 1-5
Survey Date: Thursday 28 April 2022

Survey Start: 07:00
Survey End: 19:00

AM Weather: Dry
PM Weather: Dry

Observations: No incidents or observations during the survey period

Tracsis will retain all personal data relating to this project, including all video images, for a period of three months after receipt of this report and all other data files for one year.

If you would like a copy of the personal data or wish for us to retain for a longer period, please do not hesitate to contact us.

Appendix G10.3 - TRICS

Calculation Reference: AUDIT-322901-220704-0749

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
Category : C - FLATS PRIVATELY OWNED
TOTAL VEHICLES

Selected regions and areas:

01	GREATER LONDON		
	HM	HAMMERSMITH AND FULHAM	1 days
	SK	SOUTHWARK	1 days
	WF	WALTHAM FOREST	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: No of Dwellings
Actual Range: 29 to 194 (units:)
Range Selected by User: 6 to 493 (units:)

Parking Spaces Range: All Surveys Included

Parking Spaces per Dwelling Range: All Surveys Included

Bedrooms per Dwelling Range: All Surveys Included

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/14 to 15/10/21

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Tuesday	2 days
Thursday	1 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	3 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Town Centre	1
Edge of Town Centre	2

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	1
Built-Up Zone	2

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

C3	3 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:

All Surveys Included

Population within 1 mile:

50,001 to 100,000	2 days
100,001 or More	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

500,001 or More	3 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	2 days
0.6 to 1.0	1 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	2 days
No	1 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

5 Very Good	1 days
6b (High) Excellent	2 days

This data displays the number of selected surveys with PTAL Ratings.

LIST OF SITES relevant to selection parameters

1 HM-03-C-02 BLOCKS OF FLATS HAMMERSMITH AND FULHAM
GLENTHORNE ROAD
HAMMERSMITH

Town Centre
Built-Up Zone
Total No of Dwellings: 194
Survey date: TUESDAY *30/04/19* *Survey Type: MANUAL*

2 SK-03-C-02 BLOCK OF FLATS SOUTHWARK
LAMB WALK
BERMONDSEY

Edge of Town Centre
Built-Up Zone
Total No of Dwellings: 29
Survey date: THURSDAY *23/04/15* *Survey Type: MANUAL*

3 WF-03-C-01 BLOCKS OF FLATS WALTHAM FOREST
ERSKINE ROAD
WALTHAMSTOW

Edge of Town Centre
Residential Zone
Total No of Dwellings: 97
Survey date: TUESDAY *05/11/19* *Survey Type: MANUAL*

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

22:00 - 23:00									
23:00 - 24:00									
Total Rates:			0.398			0.377			0.775

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. Parameter summary

Trip rate parameter range selected:	29 - 194 (units:)
Survey date date range:	01/01/14 - 15/10/21
Number of weekdays (Monday-Friday):	7
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	8
Surveys manually removed from selection:	25

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Calculation Reference: AUDIT-322901-220705-0749

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 01 - RETAIL
Category : C - DISCOUNT FOOD STORES
TOTAL VEHICLES

Selected regions and areas:

01	GREATER LONDON		
	LW	LEWISHAM	1 days

	LN	LINCOLNSHIRE	1 days
06	WEST MIDLANDS		
	WO	WORCESTERSHIRE	2 days
08	NORTH WEST		
	CH	CHESHIRE	1 days
09	NORTH		
	NB	NORTHUMBERLAND	1 days
11	SCOTLAND		
	PK	PERTH & KINROSS	1 days
	SR	STIRLING	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Parking spaces
Actual Range: 53 to 189 (units:)
Range Selected by User: 17 to 230 (units:)

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/14 to 23/09/21

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	3 days
Tuesday	3 days
Thursday	2 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	8 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Town Centre	1
Edge of Town Centre	7

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	2
Retail Zone	1
Built-Up Zone	4
No Sub Category	1

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

E(a)	8 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:

All Surveys Included

Population within 1 mile:

10,001 to 15,000	3 days
15,001 to 20,000	2 days
20,001 to 25,000	1 days
25,001 to 50,000	1 days
50,001 to 100,000	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

25,001 to 50,000	1 days
50,001 to 75,000	2 days
75,001 to 100,000	1 days
100,001 to 125,000	1 days
125,001 to 250,000	2 days
500,001 or More	1 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0	4 days
1.1 to 1.5	4 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Petrol filling station:

Included in the survey count	0 days
Excluded from count or no filling station	8 days

This data displays the number of surveys within the selected set that include petrol filling station activity, and the number of surveys that do not.

Travel Plan:

Yes	1 days
No	7 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	7 days
6a Excellent	1 days

This data displays the number of selected surveys with PTAL Ratings.

Covid-19 Restrictions	Yes	At least one survey within the selected data set was undertaken at a time of Covid-19 restrictions

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

Total Rates:			9.563			9.627			19.190

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. The Company authorises those who possess a current TRICS licence to access the TRICS Database and copy the data contained within the TRICS Database for the licence holders' use only. Parameter summary

Trip rate parameter range selected:	53 - 189 (units:)
Survey date date range:	01/01/14 - 23/09/21
Number of weekdays (Monday-Friday):	9
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	1
Surveys manually removed from selection:	6

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Minor arm flare	B - St Vincent Street West - Minor arm geometry	Is flare very short? Estimated flare length is zero but has been increased to 1 because a zero flare length is not allowed.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way		2.14	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Emmet Road (E)		Major
B	St Vincent Street West		Minor
C	Emmet Road (W)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - Emmet Road (W)	6.00			150.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate flare length	Flare length (PCU)	Visibility to left (m)	Visibility to right (m)
B - St Vincent Street West	One lane plus flare	5.50	4.30	4.10	2.20	2.20	✓	1.00	20	40

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	565	0.103	0.260	0.164	0.372
B-C	538	0.082	0.208	-	-
C-B	661	0.256	0.256	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.
