Dear Sir/Madam,

RE: EIAR SCOPING RELATING TO PROPOSED PART 10 MIXED USE DEVELOPMENT OF 574 DWELLINGS AND COMMUNITY/RETAIL/COMMERCIAL FLOORSPACE AT EMMET ROAD, DUBLIN 8.

1.0 Introduction

1.1 John Spain Associates has been appointed by Dublin City Council to prepare an Environmental Impact Assessment Report (EIAR) to support a future planning application for a mixed-use development on lands at Emmet Road (formerly St. Michael's Estate), Inchicore, Dublin 8.

1.2 The planning application will be made directly to An Bord Pleanála under the provisions of Section 175(3) of the Planning and Development Acts 2000 (as amended).

1.3 As part of the EIA process, we wish to consult with those statutory and non-statutory bodies that may have an interest in the proposal. We would therefore be grateful if you could provide any information relevant to the proposed site that you may hold, and/or highlight any issues that you feel should be addressed within the scope of the EIAR.

1.4 We have set out hereunder the site characteristics and a brief description of the development proposal in order to provide a strategic overview of the development characteristics.

John Spain Associates Ltd. trading as John Spain Associates. Directors: J. Spain, S. Spain.
Registered in Ireland No. 396306. Registered Office: 39, Fitzwilliam Place, Dublin 2. VAT No. IE 6416306U

2.0 Site Location

2.1 Emmet Road is located 4km west of the city centre in Inchicore. The site extends to c. 3.73 hectares is bound to the north by Emmet Road, to the south by the Grand Canal and Goldenbridge Cemetery, to the east by the rear of residential dwellings on Connolly Avenue and Bulfin Court and to the west by St Vincent Street West.

Figure 1 – Site Location

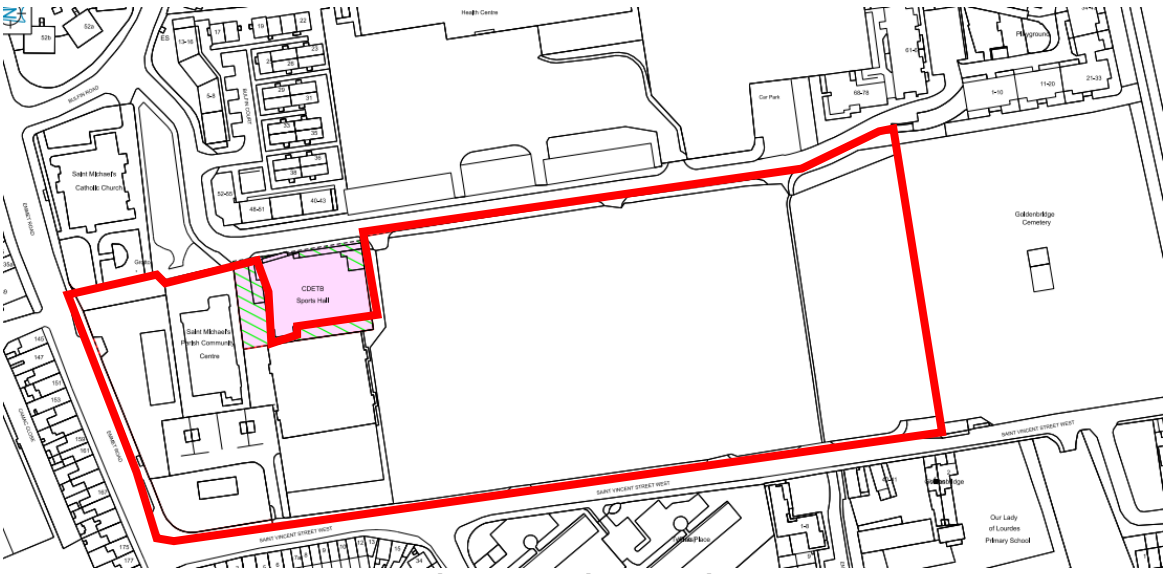

Figure 2 – Site Location

2.0 Background – Government Policy – Cost Rental

2.1 Housing for All - a New Housing Plan for Ireland', published in September 2021, is the government's housing plan to 2030. It is a multi-annual, multi-billion-euro plan which will improve Ireland's housing system and deliver more homes of all types for people with different housing needs.

2.2 Housing for All introduced 'Cost Rental', a new form of public housing in Ireland. The Cost Rental model must relate to affordability for low to middle income earners, for people who are above the social housing income limits, and who wish to rent or are unable to buy their own home.

2.3 The Government plans to provide an average of 2,000 Cost Rental homes per year for the next 10 years. This model of housing is a first in type initiative for Dublin City Council.

2.4 In this regard, the proposed Emmet Road Development will provide a tenure mix of 24% social and 76% cost rental homes

3.0 Planning Context Summary – Dublin City Development Plan 2016-2022

3.1 The site at Emmet Road is zoned 'Z14' – a Strategic Development and Regeneration Area (SDRA) – in the Dublin City Development Plan 2016-2022, with a stated objective *'to seek the social, economic and physical development and/or rejuvenation of an area with mixed use, of which residential and 'Z6' would be the predominant uses."*

3.2 According to the Dublin City Development Plan, the SDRA areas have the capacity for a substantial amount of development in developing areas in the inner and outer city.

3.3 The City Development Plan 2016-2022 contains a number of key guiding principles for this site under the heading SDRA 9 which are set out below.

SDRA9 – Guiding Principles

3.4 The guiding principles for the remaining SDRA lands include:

- *The development of a high-quality, vibrant, mixed-use urban quarter will be promoted; new facilities will be located in accessible locations and will maximise the opportunities to connect with the wider neighbourhood.*
- *The development will complement the regeneration of Inchicore by encouraging a natural extension of the village centre eastwards along Emmet Road; the development will provide strong connections between the site and the functions of the village centre, for which a local environmental improvements plan is proposed.*
- *The development of high-quality streetscape onto Emmet Road with accessible civic spaces, active frontages and an appropriate transition in scale, height and character between the village centre and the site will be promoted*
- *Strong permeability will be sought through the site, including pedestrian and cyclist connections, to achieve strong north-to-south connections between Emmet Road and the Luas/ Grand Canal corridor and east-to west connections between St Vincent Street West and Bulfin Road; active streetscapes along these routes will be promoted.*
- *Variety in housing tenures and unit types will be sought in order to achieve a balanced and sustainable community The important heritage features on, and adjoining, the site, shall be respected and highlighted by urban design with particular regard to the tourism, heritage, community and amenity value of assets such as St Michael's Church, Richmond Barracks, Goldenbridge Cemetery and the Grand Canal.*

- *The important heritage features on, and adjoining, the site, shall be respected and highlighted by urban design with particular regard to the tourism, heritage, community and amenity value of assets such as St Michael's Church, Richmond Barracks, Goldenbridge Cemetery and the Grand Canal.*
- *Innovative proposals that create a landmark destination within the city for combined facilities of a community, recreational, leisure and sports nature will be promoted; such facilities shall integrate positively with the existing sports facilities on site The development of high-quality senior citizen housing. This will be located on the site between Thornton Heights and Richmond Barracks.*

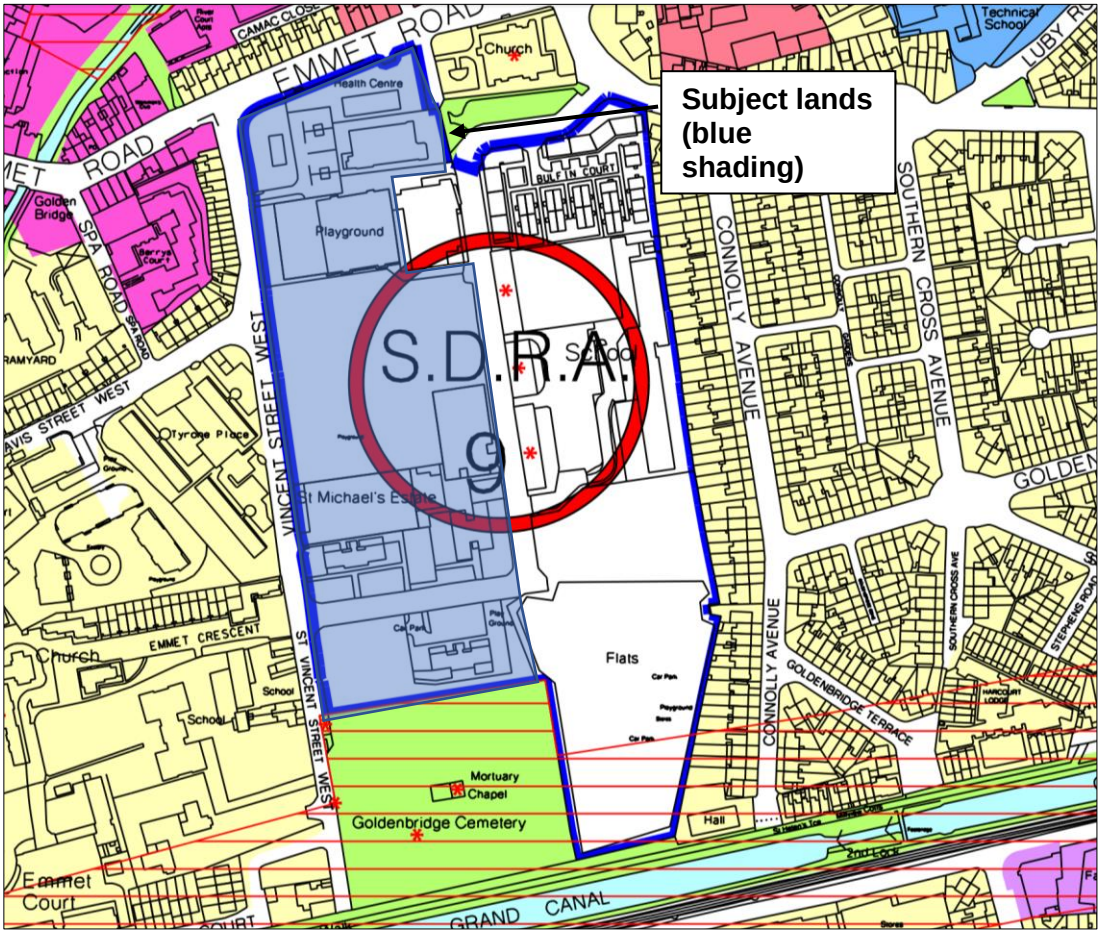

Figure 3 – SDRA 9. St Michael's Estate

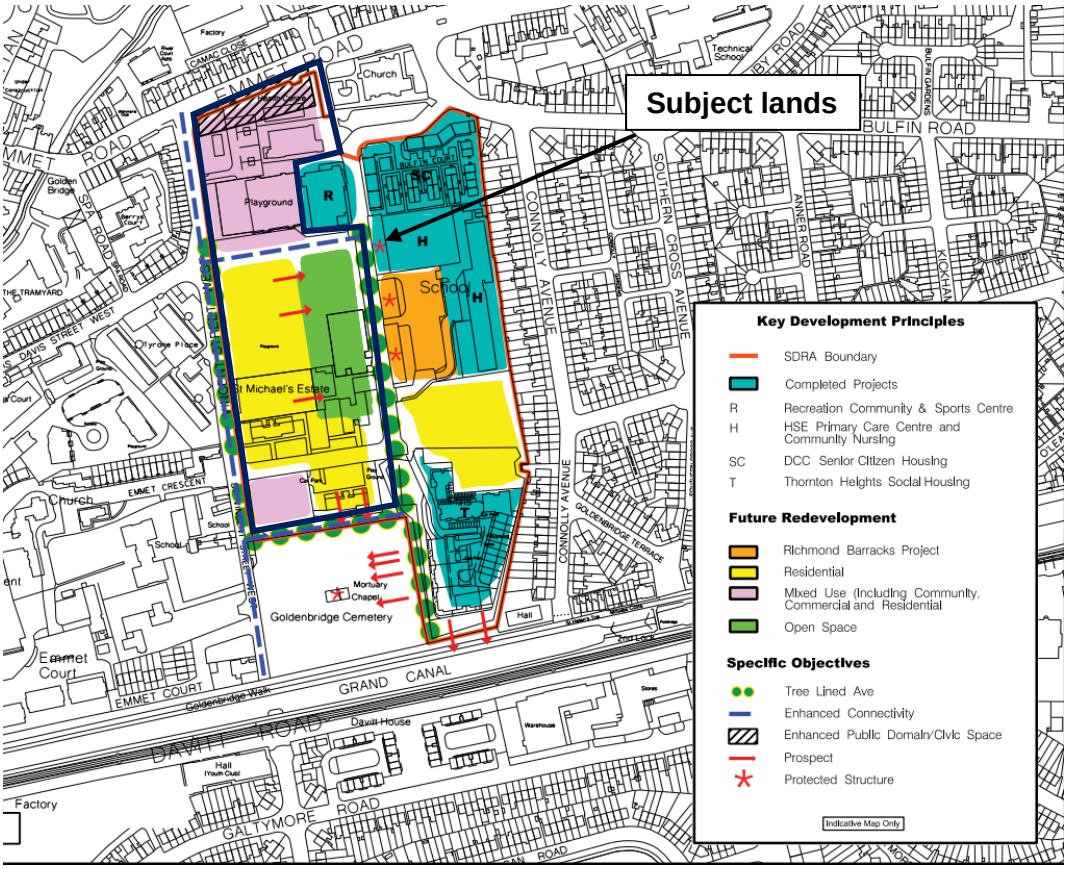

Figure 4 – Key Development Principles (Indicative Land Use Map)

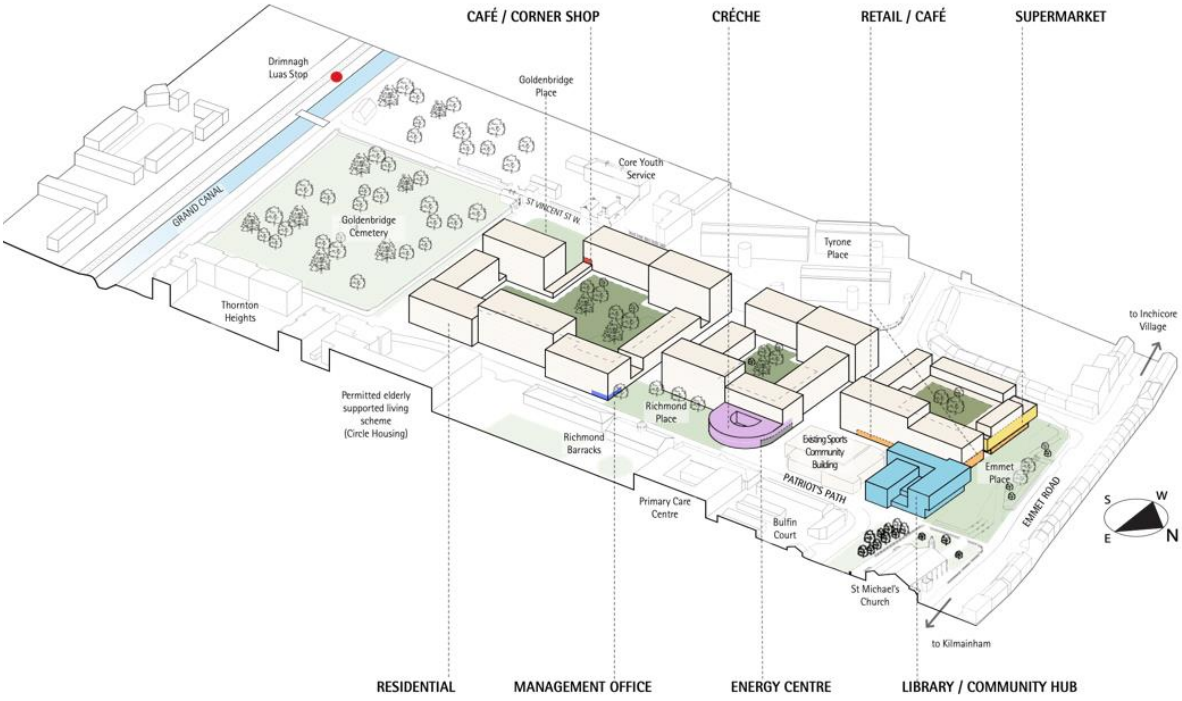
4.0 Project Description Summary

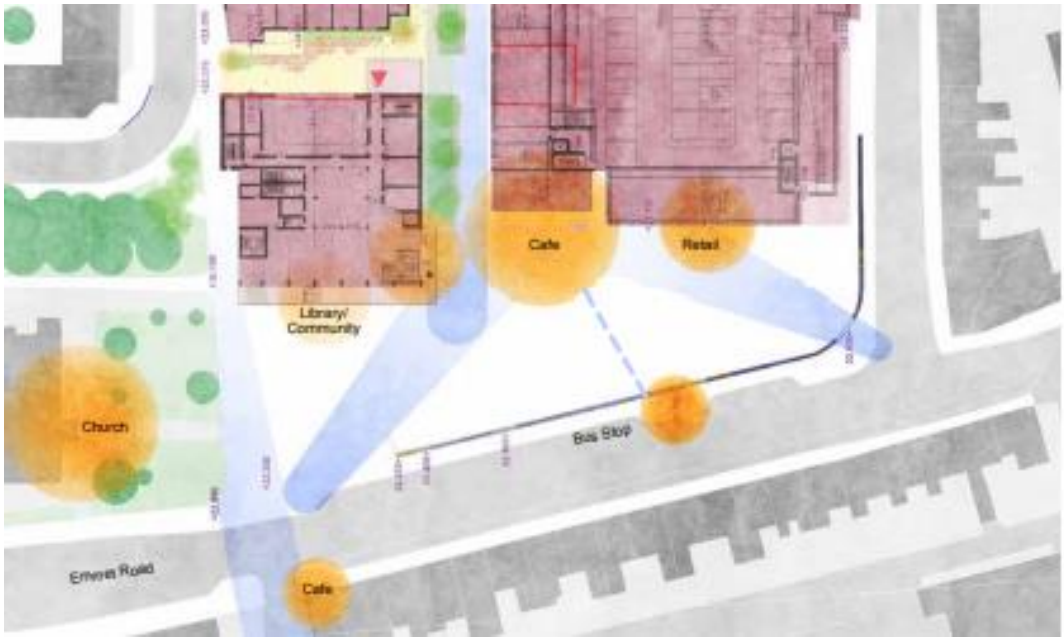
4.1 The project is predominantly residential in nature, comprising c. 574 no. apartments supplemented and supported by community facilities (Library/Community Hub, Creche, Retail/Café units) in a neighbourhood centre which includes a supermarket fronting onto Emmet Road.

4.2 The proposal also includes 50 no. car parking spaces including 3 no. accessible spaces, 30 car share spaces and 10% Electric Vehicle charging points. In addition it is proposed to provide 939 no. bicycle spaces and 293 bicycle visitor spaces. The car parking spaces will be predominantly provided in a Village Mobility Hub located beneath the Supermarket. Car parking spaces will be located adjacent to Goldenbridge Cemetery.

Community and Commercial Elements of Proposed Development[1]



4.3 The supporting community and commercial elements of the proposed development (of some 5,980 sq. m) will comprise:

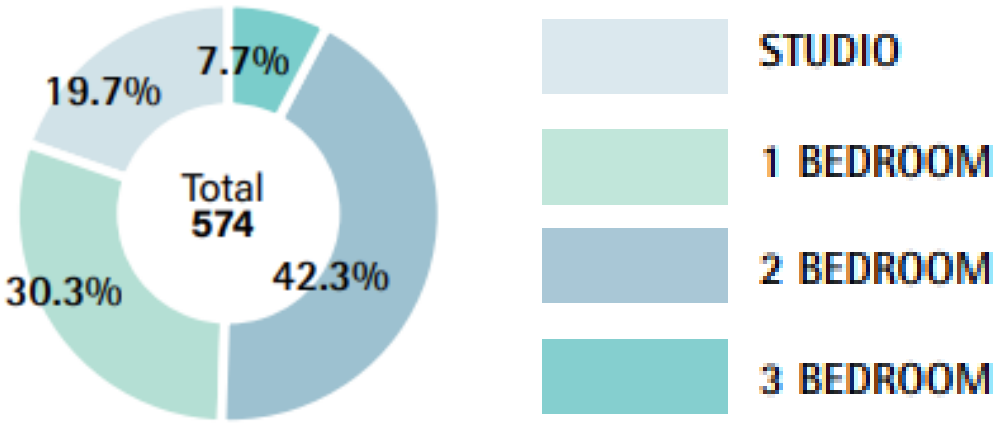


Creche	750 sq. m
Library/Community Hub	2,750 sq. m
Café/retail	150 sq. m
Supermarket	1,500 sq. m
Retail/café units	650 sq. m

[1] [1] Note: May be subject to change arising from further design analysis

Management office	90 sq. m

OVERVIEW OF PROPOSED USES



Residential Element of Proposed Development

4.4 The residential element of the proposed Emmet Road Development will provide a tenure mix of 24% social and 76% cost rental homes. The overall proposed apartment mix is envisaged as follows:

	Studio	1 bedroom	2 bedroom	3 bedroom	Total
Cost Rental Apartments	113	131	193		437
	25.8%	30.0%	44.2%		
Social Apartments	-	43	50	44	137
	0%	31.3%	36.5%	32.2%	
Total	113	174	243	44	574
% Mix	19.7%	30.3%	42.2%	7.7%	100%

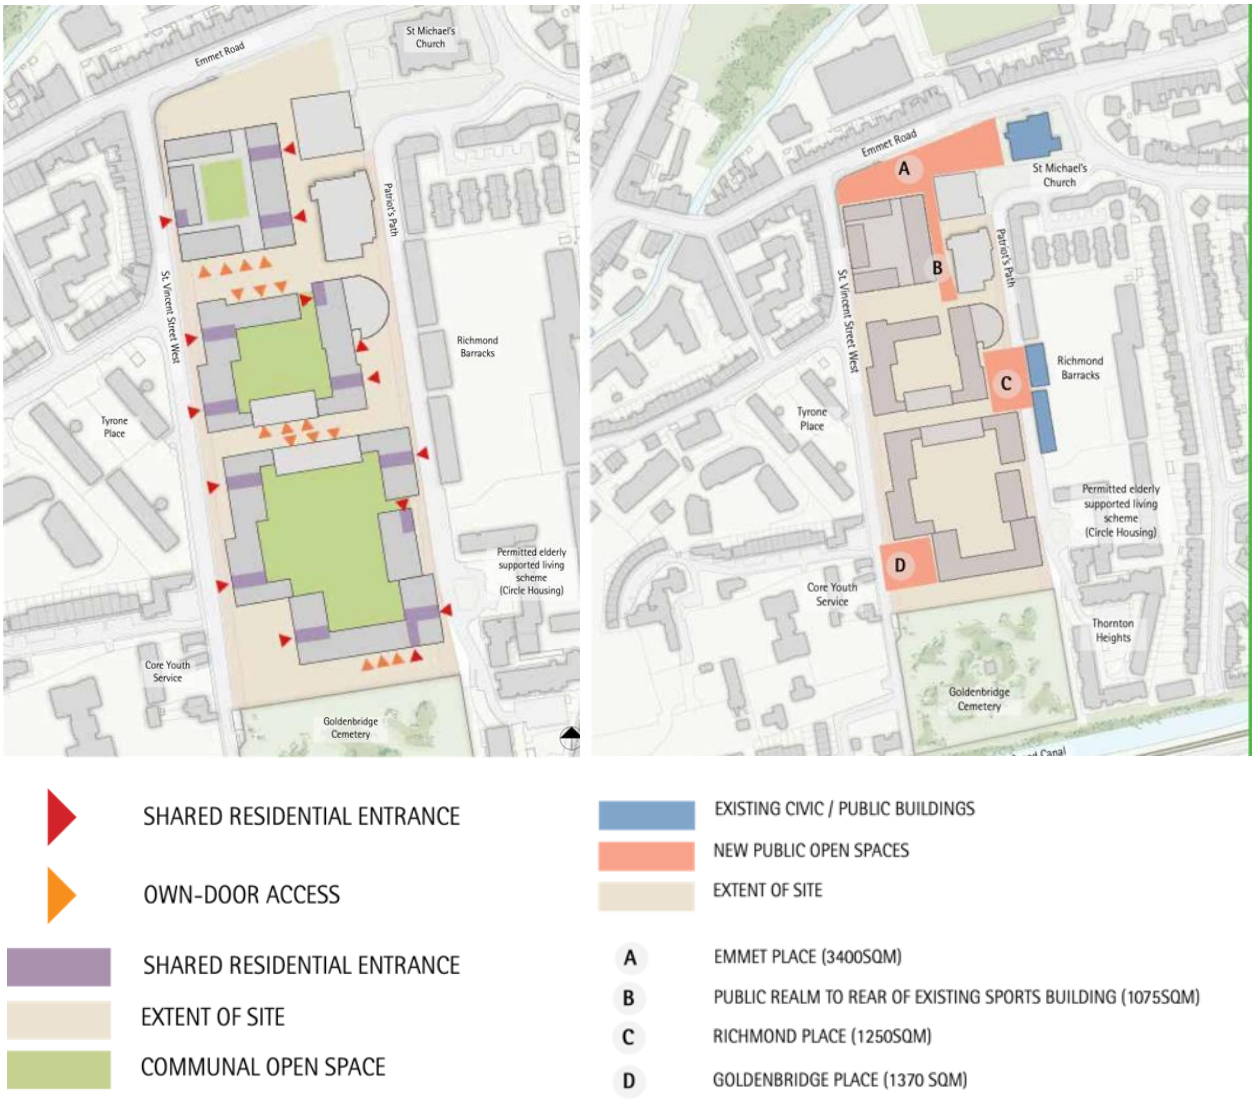


Table 1 Proposed Apartment Mix[2]

[2] Note: May be subject to change arising from further design analysis

Public Open Space/Communal Open Space

4.5 It is proposed to provide c. 7,095 sq. m of public open space (c. 19% of the site) in 4 no. areas distributed through the site as well as communal open space of c. 4,540 sq. m for the residents.

Scale and Massing

4.6 The proposed development is formed around 3 no. communal open space areas in a range of heights of 3,5 and 7 storey elements.

4.7 The EIAR will also include an assessment of the permitted (under Part 8) demolition of the former health centre and St. Michael's community centre and associated site clearance works which include the remains of a disused halting site (located in the northern portion of the subject lands) as well as a connection to Irish Water services from the subject site along Emmet Road for c. 200m to the Blackhorse Bridge located to the west, (adjacent to the Camac River) which will form part of the assessment.

5.0 Response Timelines Project Description Summary

5.1 We would appreciate if you could provide any information relevant to the proposed site that you may have and highlight any likely significant impacts you consider should be addressed within the scope of the EIAR.

5.2 We would be grateful if you could reply by the 27th of June 2022.

5.3 If you require any further information, or clarification please contact the EIA coordinator in John Spain Associates, who is Rory Kunz Executive Director:

% Mix	19.7%	30.3%	42.2%	7.7%	100%

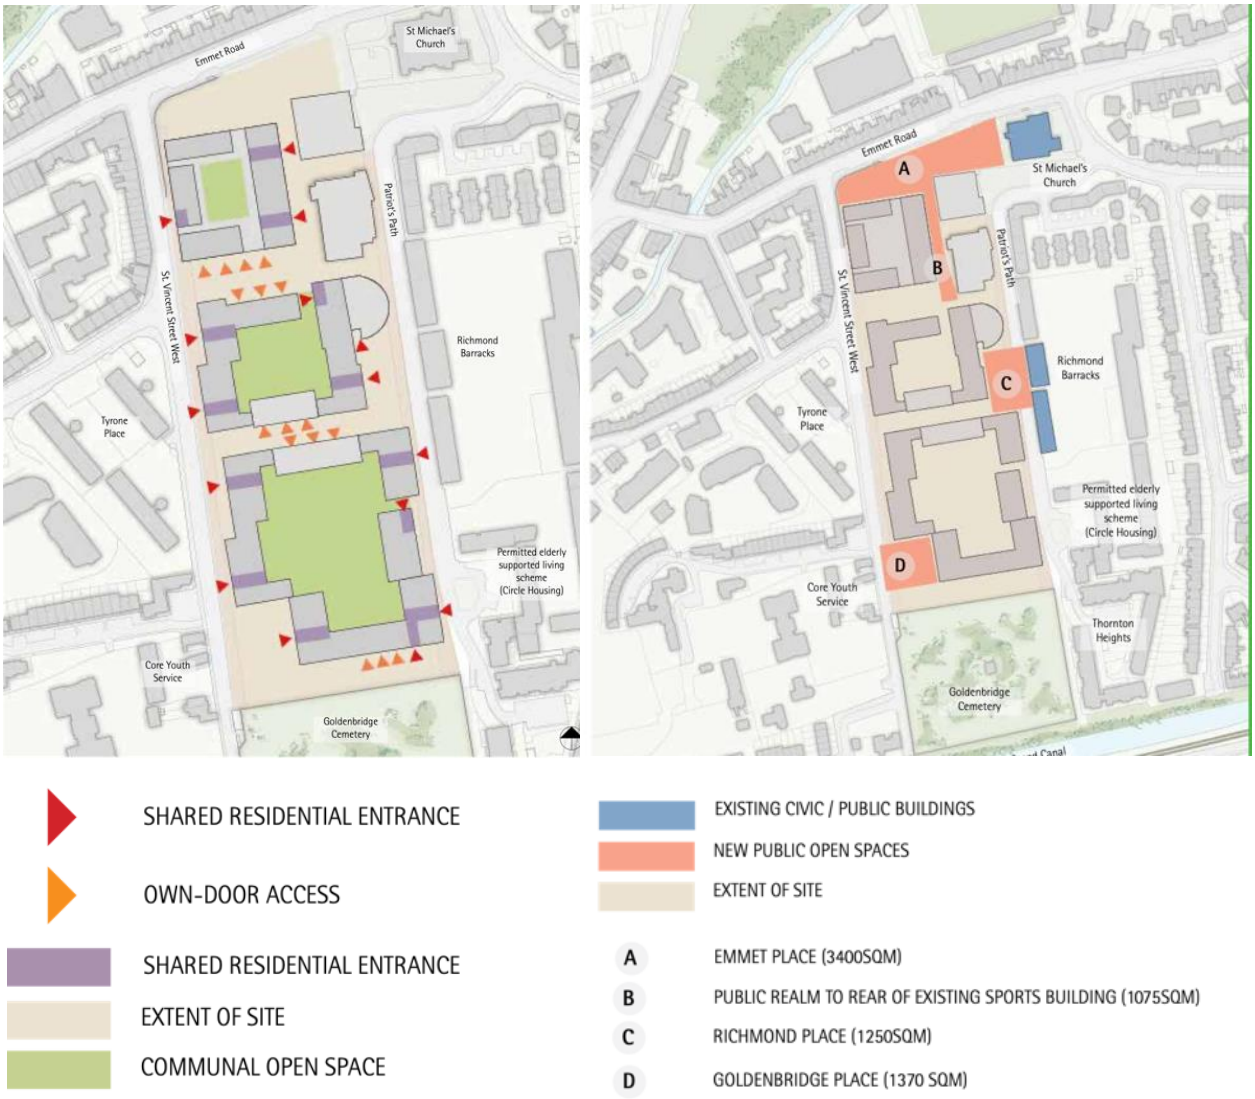

Table 1 Proposed Apartment Mix[2]

[2] Note: May be subject to change arising from further design analysis

Public Open Space/Communal Open Space

4.5 It is proposed to provide c. 7,095 sq. m of public open space (c. 19% of the site) in 4 no. areas distributed through the site as well as communal open space of c. 4,540 sq. m for the residents.

Scale and Massing

4.6 The proposed development is formed around 3 no. communal open space areas in a range of heights of 3,5 and 7 storey elements.

4.7 The EIAR will also include an assessment of the permitted (under Part 8) demolition of the former health centre and St. Michael's community centre and associated site clearance works which include the remains of a disused halting site (located in the northern portion of the subject lands) as well as a connection to Irish Water services from the subject site along Emmet Road for c. 200m to the Blackhorse Bridge located to the west, (adjacent to the Camac River) which will form part of the assessment.

5.0 Response Timelines Project Description Summary

5.1 We would appreciate if you could provide any information relevant to the proposed site that you may have and highlight any likely significant impacts you consider should be addressed within the scope of the EIAR.

5.2 We would be grateful if you could reply by the 27th of June 2022.

5.3 If you require any further information, or clarification please contact the EIA coordinator in John Spain Associates, who is Rory Kunz Executive Director:

Dear Sir/Madam,

RE: EIAR SCOPING RELATING TO PROPOSED PART 10 MIXED USE DEVELOPMENT OF 574 DWELLINGS AND COMMUNITY/RETAIL/COMMERCIAL FLOORSPACE AT EMMET ROAD, DUBLIN 8.

1.0 Introduction

1.1 John Spain Associates has been appointed by Dublin City Council to prepare an Environmental Impact Assessment Report (EIAR) to support a future planning application for a mixed-use development on lands at Emmet Road (formerly St. Michael's Estate), Inchicore, Dublin 8.

1.2 The planning application will be made directly to An Bord Pleanála under the provisions of Section 175(3) of the Planning and Development Acts 2000 (as amended).

1.3 As part of the EIA process, we wish to consult with those statutory and non-statutory bodies that may have an interest in the proposal. We would therefore be grateful if you could provide any information relevant to the proposed site that you may hold, and/or highlight any issues that you feel should be addressed within the scope of the EIAR.

1.4 We have set out hereunder the site characteristics and a brief description of the development proposal in order to provide a strategic overview of the development characteristics.

Registered in Ireland No. 396306. Registered Office: 39, Fitzwilliam Place, Dublin 2. VAT No. IE 6416306U

2.0 Site Location

2.1 Emmet Road is located 4km west of the city centre in Inchicore. The site extends to c. 3.73 hectares is bound to the north by Emmet Road, to the south by the Grand Canal and Goldenbridge Cemetery, to the east by the rear of residential dwellings on Connolly Avenue and Bulfin Court and to the west by St Vincent Street West.

Figure 1 – Site Location

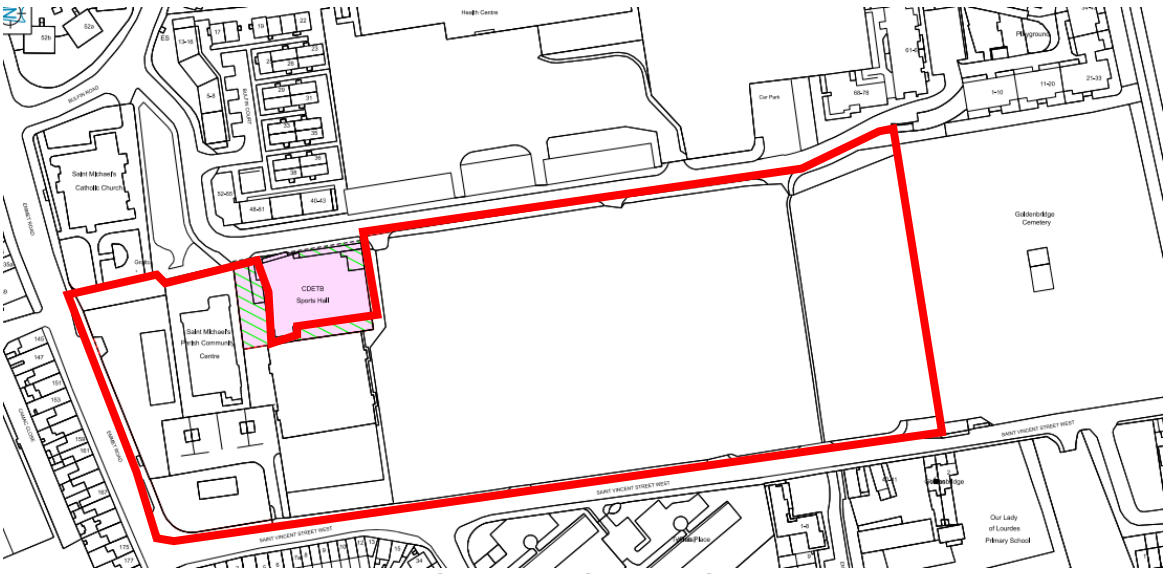

Figure 2 – Site Location

2.0 Background – Government Policy – Cost Rental

2.1 Housing for All - a New Housing Plan for Ireland', published in September 2021, is the government's housing plan to 2030. It is a multi-annual, multi-billion-euro plan which will improve Ireland's housing system and deliver more homes of all types for people with different housing needs.

2.2 Housing for All introduced 'Cost Rental', a new form of public housing in Ireland. The Cost Rental model must relate to affordability for low to middle income earners, for people who are above the social housing income limits, and who wish to rent or are unable to buy their own home.

2.3 The Government plans to provide an average of 2,000 Cost Rental homes per year for the next 10 years. This model of housing is a first in type initiative for Dublin City Council.

2.4 In this regard, the proposed Emmet Road Development will provide a tenure mix of 24% social and 76% cost rental homes

3.0 Planning Context Summary – Dublin City Development Plan 2016-2022

3.1 The site at Emmet Road is zoned 'Z14' – a Strategic Development and Regeneration Area (SDRA) – in the Dublin City Development Plan 2016-2022, with a stated objective *'to seek the social, economic and physical development and/or rejuvenation of an area with mixed use, of which residential and 'Z6' would be the predominant uses."*

3.2 According to the Dublin City Development Plan, the SDRA areas have the capacity for a substantial amount of development in developing areas in the inner and outer city.

3.3 The City Development Plan 2016-2022 contains a number of key guiding principles for this site under the heading SDRA 9 which are set out below.

SDRA9 – Guiding Principles

3.4 The guiding principles for the remaining SDRA lands include:

- *The development of a high-quality, vibrant, mixed-use urban quarter will be promoted; new facilities will be located in accessible locations and will maximise the opportunities to connect with the wider neighbourhood.*
- *The development will complement the regeneration of Inchicore by encouraging a natural extension of the village centre eastwards along Emmet Road; the development will provide strong connections between the site and the functions of the village centre, for which a local environmental improvements plan is proposed.*
- *The development of high-quality streetscape onto Emmet Road with accessible civic spaces, active frontages and an appropriate transition in scale, height and character between the village centre and the site will be promoted*
- *Strong permeability will be sought through the site, including pedestrian and cyclist connections, to achieve strong north-to-south connections between Emmet Road and the Luas/ Grand Canal corridor and east-to west connections between St Vincent Street West and Bulfin Road; active streetscapes along these routes will be promoted.*

- *Variety in housing tenures and unit types will be sought in order to achieve a balanced and sustainable community The important heritage features on, and adjoining, the site, shall be respected and highlighted by urban design with particular regard to the tourism, heritage, community and amenity value of assets such as St Michael's Church, Richmond Barracks, Goldenbridge Cemetery and the Grand Canal.*
- *The important heritage features on, and adjoining, the site, shall be respected and highlighted by urban design with particular regard to the tourism, heritage, community and amenity value of assets such as St Michael's Church, Richmond Barracks, Goldenbridge Cemetery and the Grand Canal.*
- *Innovative proposals that create a landmark destination within the city for combined facilities of a community, recreational, leisure and sports nature will be promoted; such facilities shall integrate positively with the existing sports facilities on site The development of high-quality senior citizen housing. This will be located on the site between Thornton Heights and Richmond Barracks.*

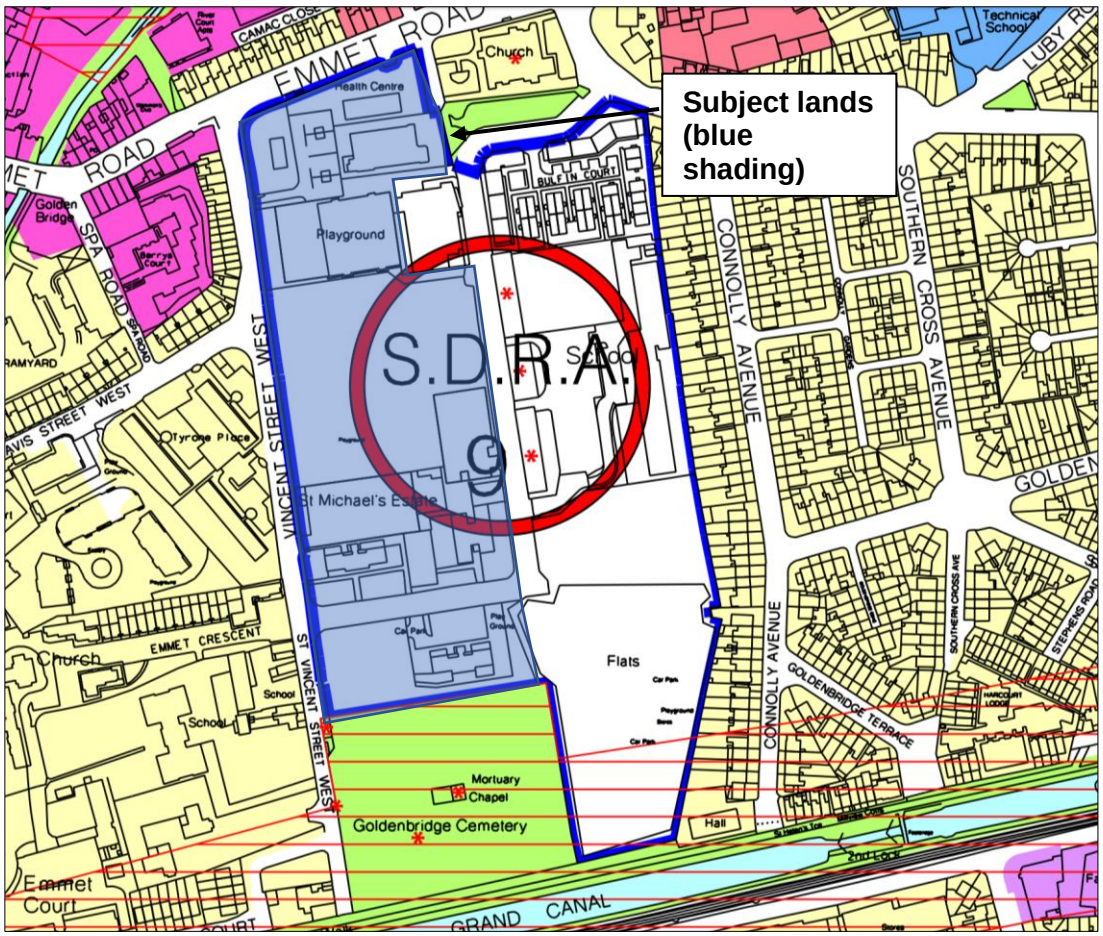

Figure 3 – SDRA 9. St Michael's Estate

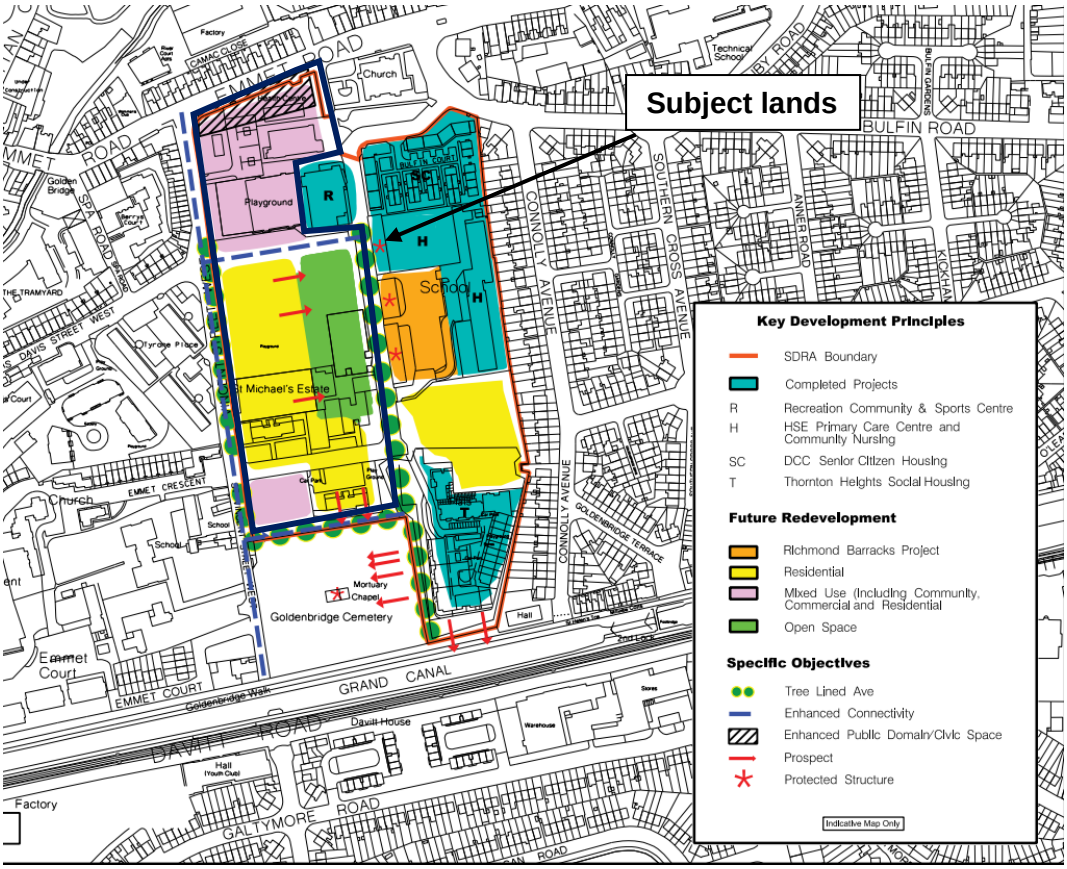

Figure 4 – Key Development Principles (Indicative Land Use Map)

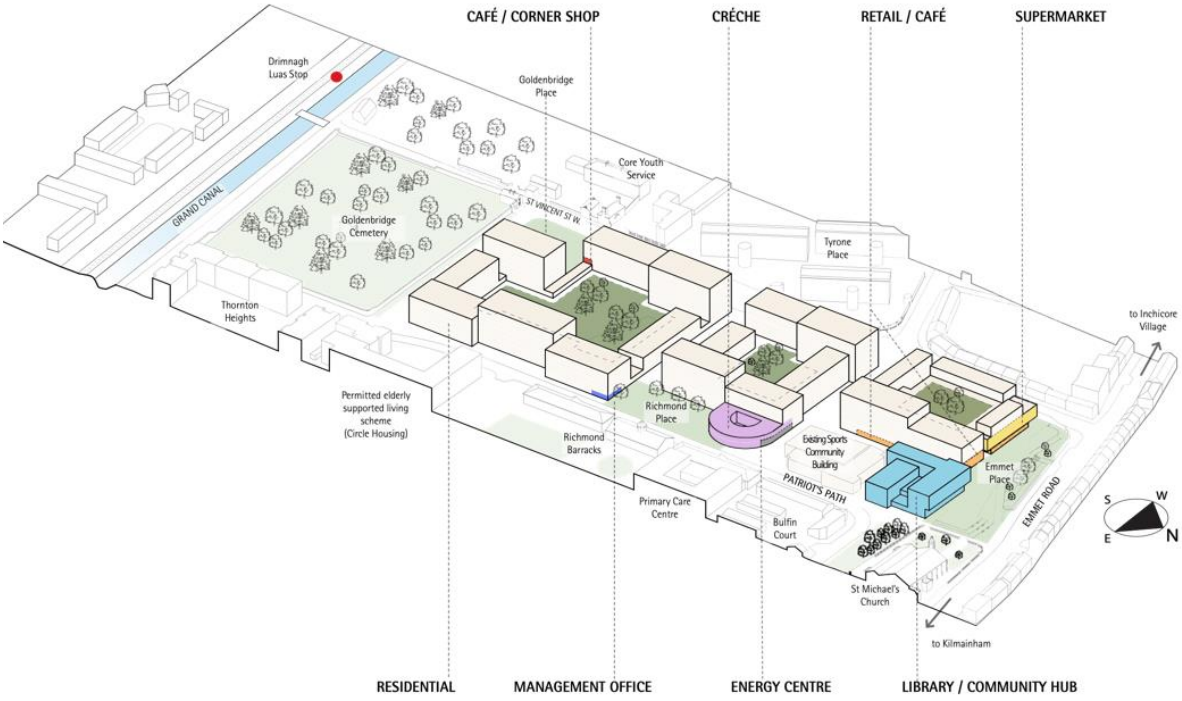
4.0 Project Description Summary

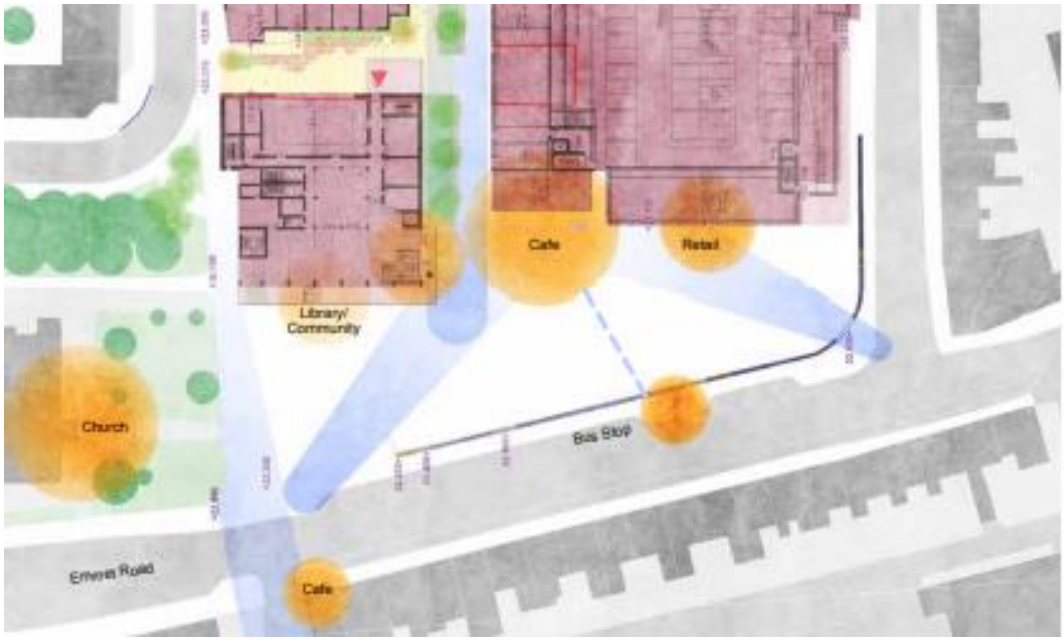
4.1 The project is predominantly residential in nature, comprising c. 574 no. apartments supplemented and supported by community facilities (Library/Community Hub, Creche, Retail/Café units) in a neighbourhood centre which includes a supermarket fronting onto Emmet Road.

4.2 The proposal also includes 50 no. car parking spaces including 3 no. accessible spaces, 30 car share spaces and 10% Electric Vehicle charging points. In addition it is proposed to provide 939 no. bicycle spaces and 293 bicycle visitor spaces. The car parking spaces will be predominantly provided in a Village Mobility Hub located beneath the Supermarket. Car parking spaces will be located adjacent to Goldenbridge Cemetery.

Community and Commercial Elements of Proposed Development[1]



4.3 The supporting community and commercial elements of the proposed development (of some 5,980 sq. m) will comprise:

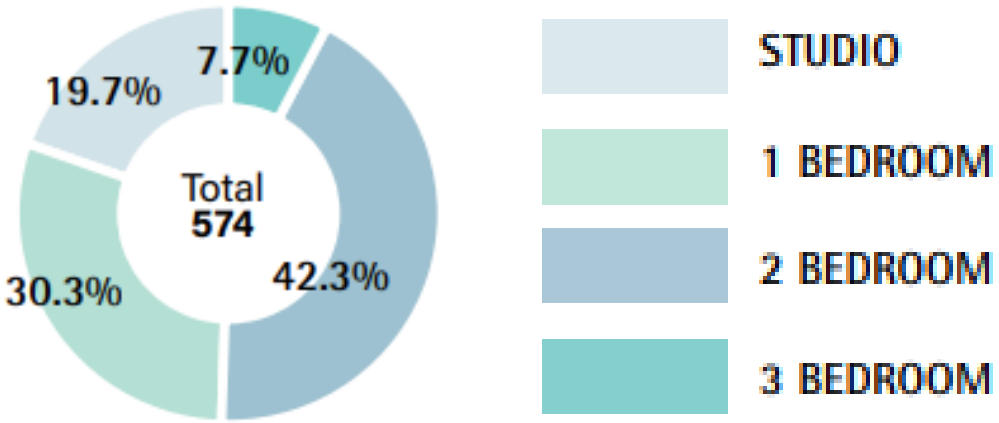


Creche	750 sq. m
Library/Community Hub	2,750 sq. m
Café/retail	150 sq. m
Supermarket	1,500 sq. m
Retail/café units	650 sq. m

[1] [1] Note: May be subject to change arising from further design analysis

Management office	90 sq. m

OVERVIEW OF PROPOSED USES



Residential Element of Proposed Development

4.4 The residential element of the proposed Emmet Road Development will provide a tenure mix of 24% social and 76% cost rental homes. The overall proposed apartment mix is envisaged as follows:

	Studio	1 bedroom	2 bedroom	3 bedroom	Total
Cost Rental Apartments	113	131	193		437
	25.8%	30.0%	44.2%		
Social Apartments	-	43	50	44	137
	0%	31.3%	36.5%	32.2%	
Total	113	174	243	44	574
% Mix	19.7%	30.3%	42.2%	7.7%	100%

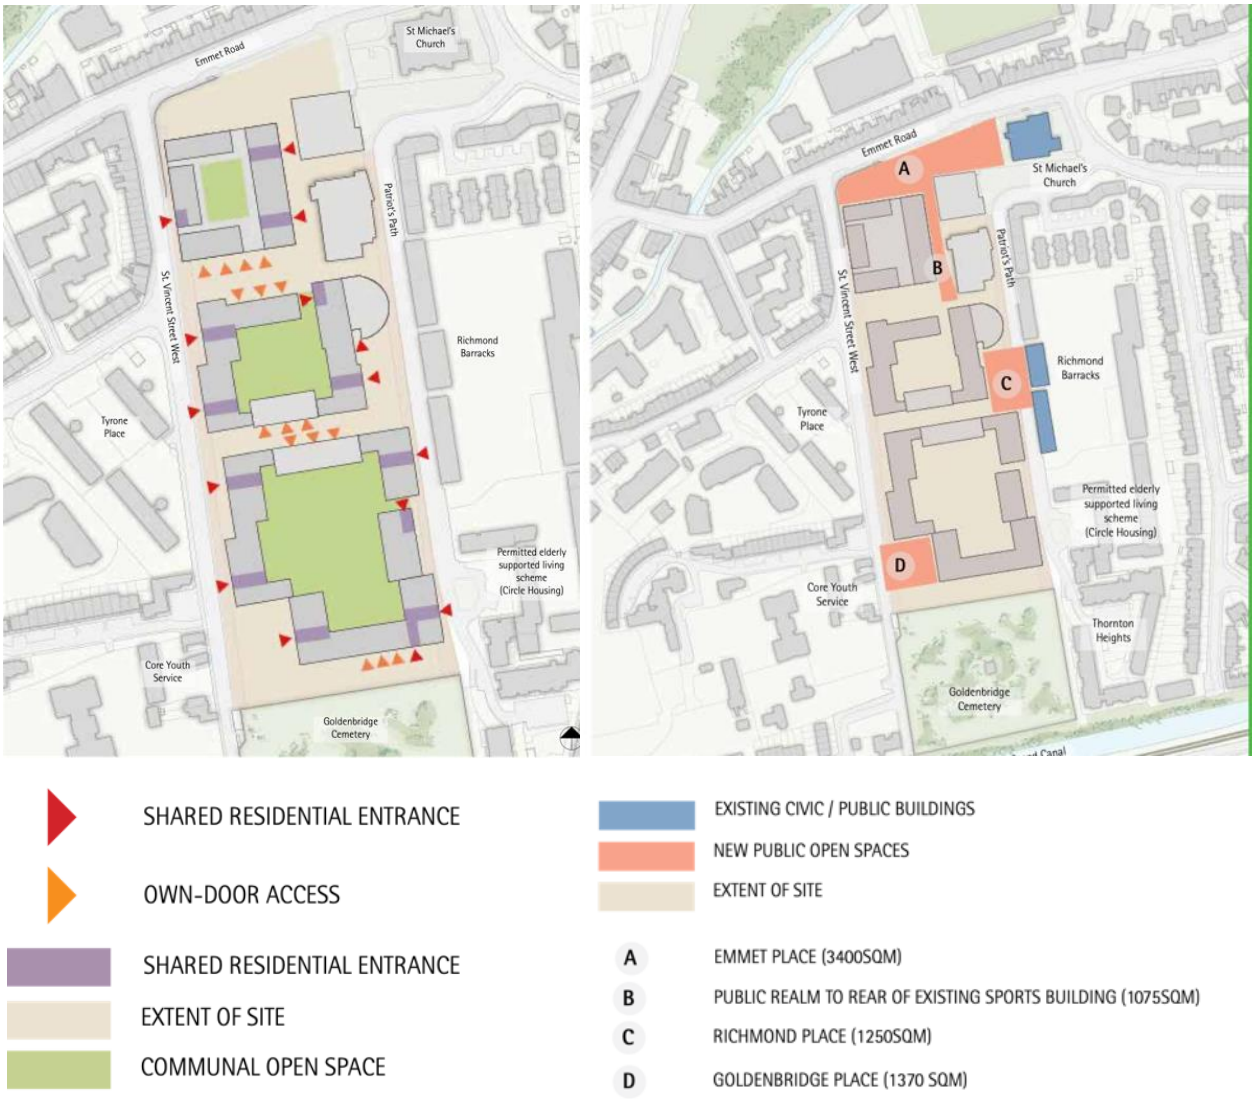


Table 1 Proposed Apartment Mix[2]

[2] Note: May be subject to change arising from further design analysis

Public Open Space/Communal Open Space

4.5 It is proposed to provide c. 7,095 sq. m of public open space (c. 19% of the site) in 4 no. areas distributed through the site as well as communal open space of c. 4,540 sq. m for the residents.

Scale and Massing

4.6 The proposed development is formed around 3 no. communal open space areas in a range of heights of 3,5 and 7 storey elements.

4.7 The EIAR will also include an assessment of the permitted (under Part 8) demolition of the former health centre and St. Michael's community centre and associated site clearance works which include the remains of a disused halting site (located in the northern portion of the subject lands) as well as a connection to Irish Water services from the subject site along Emmet Road for c. 200m to the Blackhorse Bridge located to the west, (adjacent to the Camac River) which will form part of the assessment.

5.0 Response Timelines Project Description Summary

5.1 We would appreciate if you could provide any information relevant to the proposed site that you may have and highlight any likely significant impacts you consider should be addressed within the scope of the EIAR.

5.2 We would be grateful if you could reply by the 27th of June 2022.

4.5 It is proposed to provide c. 7,095 sq. m of public open space (c. 19% of the site) in 4 no. areas distributed through the site as well as communal open space of c. 4,540 sq. m for the residents.

Scale and Massing

4.6 The proposed development is formed around 3 no. communal open space areas in a range of heights of 3,5 and 7 storey elements.

4.7 The EIAR will also include an assessment of the permitted (under Part 8) demolition of the former health centre and St. Michael's community centre and associated site clearance works which include the remains of a disused halting site (located in the northern portion of the subject lands) as well as a connection to Irish Water services from the subject site along Emmet Road for c. 200m to the Blackhorse Bridge located to the west, (adjacent to the Camac River) which will form part of the assessment.

5.0 Response Timelines Project Description Summary

5.1 We would appreciate if you could provide any information relevant to the proposed site that you may have and highlight any likely significant impacts you consider should be addressed within the scope of the EIAR.

5.2 We would be grateful if you could reply by the 27th of June 2022.

5.3 If you require any further information, or clarification please contact the EIA coordinator in John Spain Associates, who is Rory Kunz Executive Director:

Dear Sir/Madam,

RE: EIAR SCOPING RELATING TO PROPOSED PART 10 MIXED USE DEVELOPMENT OF 574 DWELLINGS AND COMMUNITY/RETAIL/COMMERCIAL FLOORSPACE AT EMMET ROAD, DUBLIN 8.

1.0 Introduction

1.1 John Spain Associates has been appointed by Dublin City Council to prepare an Environmental Impact Assessment Report (EIAR) to support a future planning application for a mixed-use development on lands at Emmet Road (formerly St. Michael's Estate), Inchicore, Dublin 8.

1.2 The planning application will be made directly to An Bord Pleanála under the provisions of Section 175(3) of the Planning and Development Acts 2000 (as amended).

1.3 As part of the EIA process, we wish to consult with those statutory and non-statutory bodies that may have an interest in the proposal. We would therefore be grateful if you could provide any information relevant to the proposed site that you may hold, and/or highlight any issues that you feel should be addressed within the scope of the EIAR.

1.4 We have set out hereunder the site characteristics and a brief description of the development proposal in order to provide a strategic overview of the development characteristics.

Registered in Ireland No. 396306. Registered Office: 39, Fitzwilliam Place, Dublin 2. VAT No. IE 6416306U

2.0 Site Location

2.1 Emmet Road is located 4km west of the city centre in Inchicore. The site extends to c. 3.73 hectares is bound to the north by Emmet Road, to the south by the Grand Canal and Goldenbridge Cemetery, to the east by the rear of residential dwellings on Connolly Avenue and Bulfin Court and to the west by St Vincent Street West.

Figure 1 – Site Location

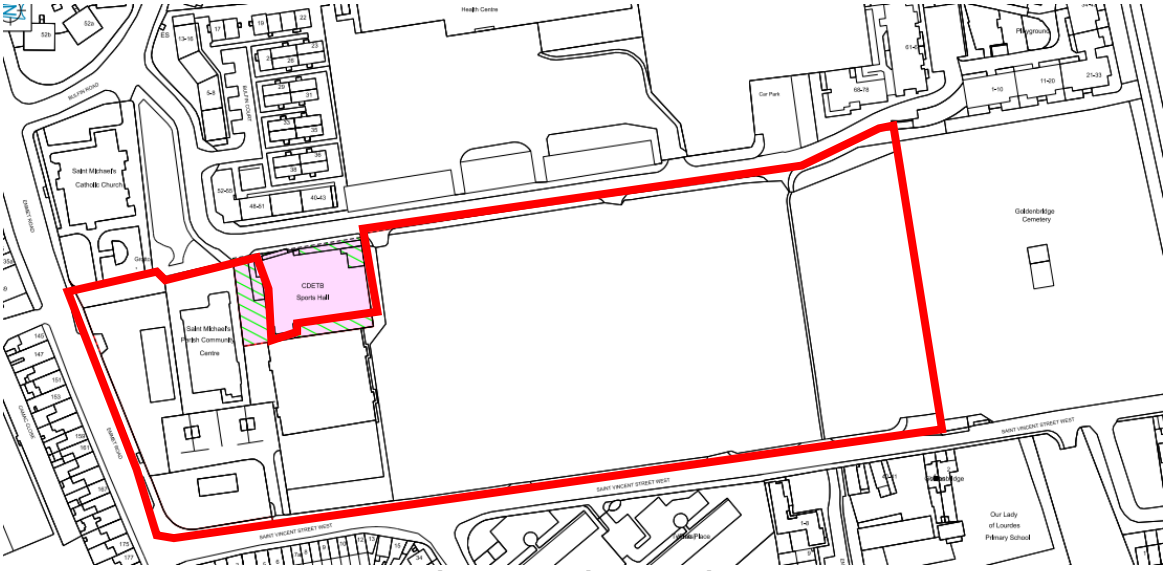

Figure 2 – Site Location

2.0 Background – Government Policy – Cost Rental

2.1 Housing for All - a New Housing Plan for Ireland', published in September 2021, is the government's housing plan to 2030. It is a multi-annual, multi-billion-euro plan which will improve Ireland's housing system and deliver more homes of all types for people with different housing needs.

2.2 Housing for All introduced 'Cost Rental', a new form of public housing in Ireland. The Cost Rental model must relate to affordability for low to middle income earners, for people who are above the social housing income limits, and who wish to rent or are unable to buy their own home.

2.3 The Government plans to provide an average of 2,000 Cost Rental homes per year for the next 10 years. This model of housing is a first in type initiative for Dublin City Council.

2.4 In this regard, the proposed Emmet Road Development will provide a tenure mix of 24% social and 76% cost rental homes

3.0 Planning Context Summary – Dublin City Development Plan 2016-2022

3.1 The site at Emmet Road is zoned 'Z14' – a Strategic Development and Regeneration Area (SDRA) – in the Dublin City Development Plan 2016-2022, with a stated objective *'to seek the social, economic and physical development and/or rejuvenation of an area with mixed use, of which residential and 'Z6' would be the predominant uses."*

3.2 According to the Dublin City Development Plan, the SDRA areas have the capacity for a substantial amount of development in developing areas in the inner and outer city.

3.3 The City Development Plan 2016-2022 contains a number of key guiding principles for this site under the heading SDRA 9 which are set out below.

SDRA9 – Guiding Principles

3.4 The guiding principles for the remaining SDRA lands include:

- *The development of a high-quality, vibrant, mixed-use urban quarter will be promoted; new facilities will be located in accessible locations and will maximise the opportunities to connect with the wider neighbourhood.*
- *The development will complement the regeneration of Inchicore by encouraging a natural extension of the village centre eastwards along Emmet Road; the development will provide strong connections between the site and the functions of the village centre, for which a local environmental improvements plan is proposed.*
- *The development of high-quality streetscape onto Emmet Road with accessible civic spaces, active frontages and an appropriate transition in scale, height and character between the village centre and the site will be promoted*
- *Strong permeability will be sought through the site, including pedestrian and cyclist connections, to achieve strong north-to-south connections between Emmet Road and the Luas/ Grand Canal corridor and east-to west connections between St Vincent Street West and Bulfin Road; active streetscapes along these routes will be promoted.*

- *Variety in housing tenures and unit types will be sought in order to achieve a balanced and sustainable community The important heritage features on, and adjoining, the site, shall be respected and highlighted by urban design with particular regard to the tourism, heritage, community and amenity value of assets such as St Michael's Church, Richmond Barracks, Goldenbridge Cemetery and the Grand Canal.*
- *The important heritage features on, and adjoining, the site, shall be respected and highlighted by urban design with particular regard to the tourism, heritage, community and amenity value of assets such as St Michael's Church, Richmond Barracks, Goldenbridge Cemetery and the Grand Canal.*
- *Innovative proposals that create a landmark destination within the city for combined facilities of a community, recreational, leisure and sports nature will be promoted; such facilities shall integrate positively with the existing sports facilities on site The development of high-quality senior citizen housing. This will be located on the site between Thornton Heights and Richmond Barracks.*

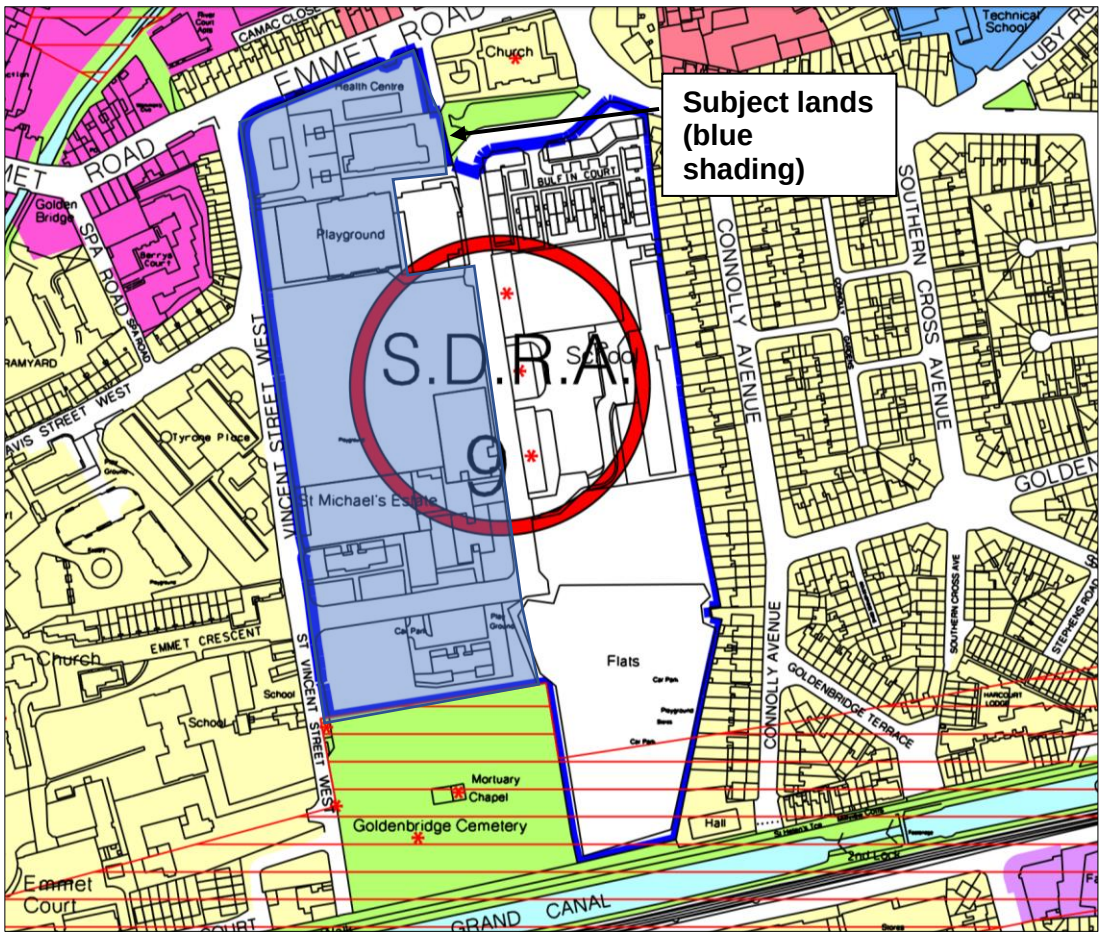

Figure 3 – SDRA 9. St Michael's Estate

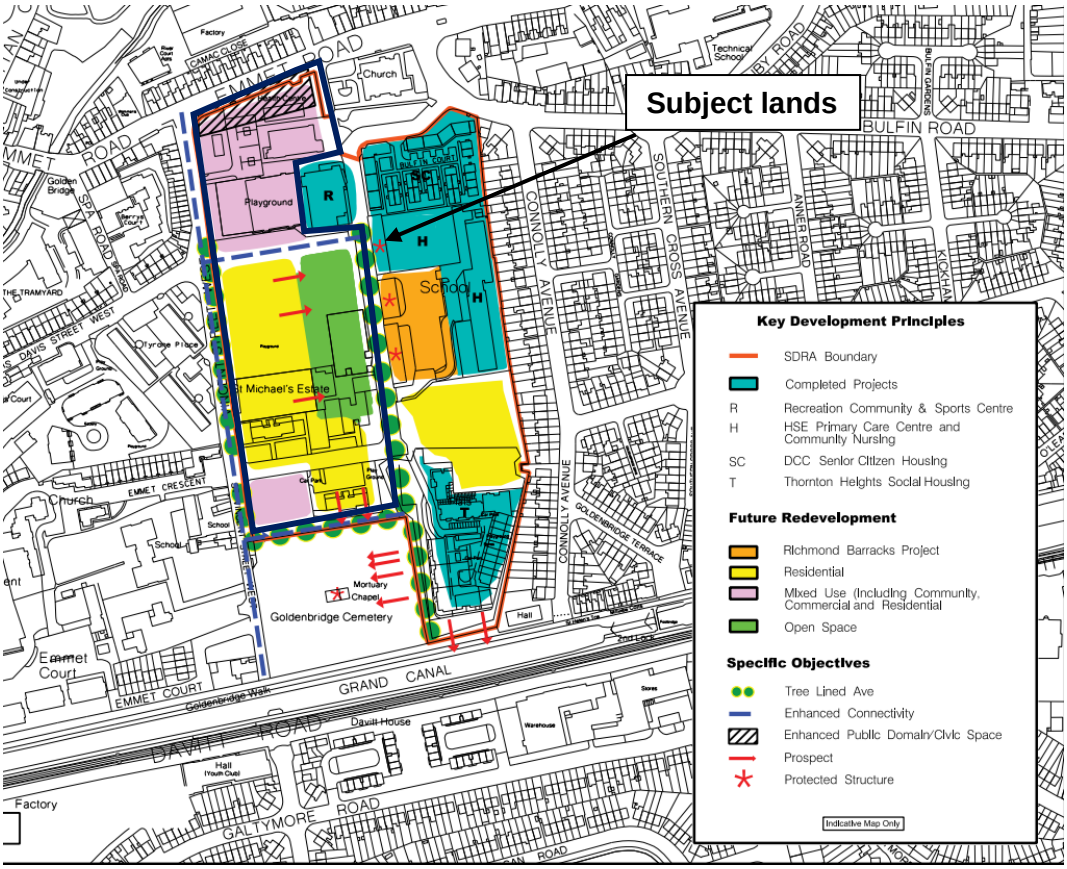

Figure 4 – Key Development Principles (Indicative Land Use Map)

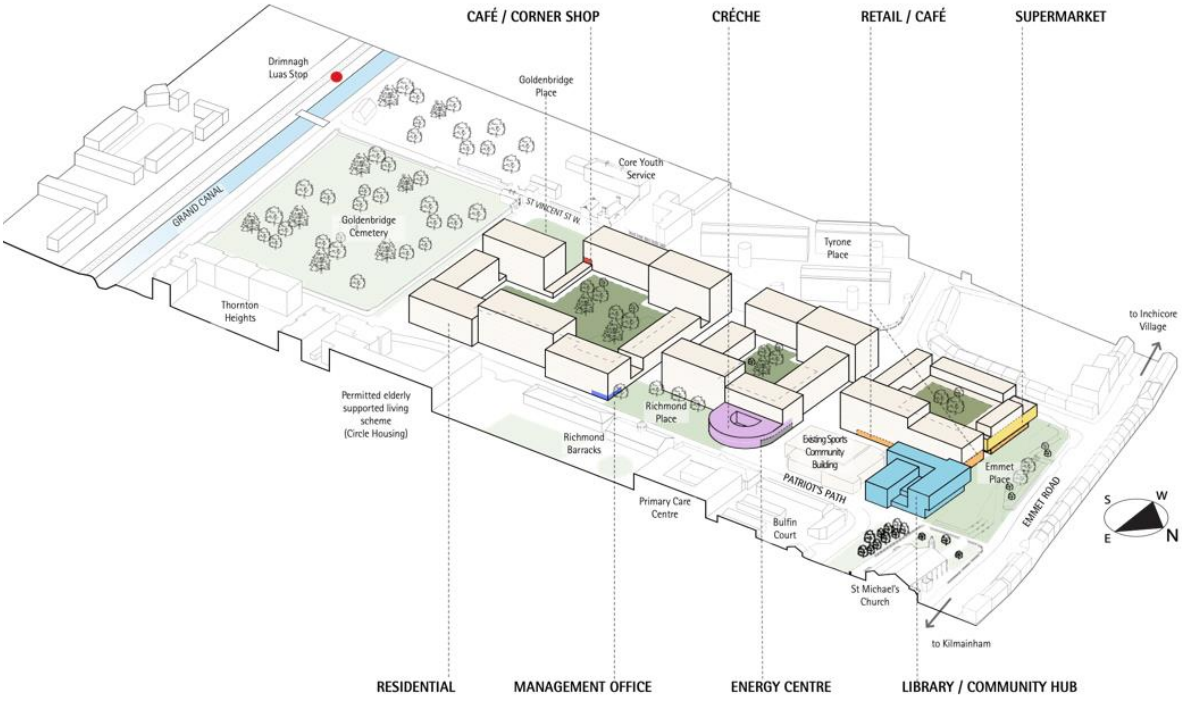
4.0 Project Description Summary

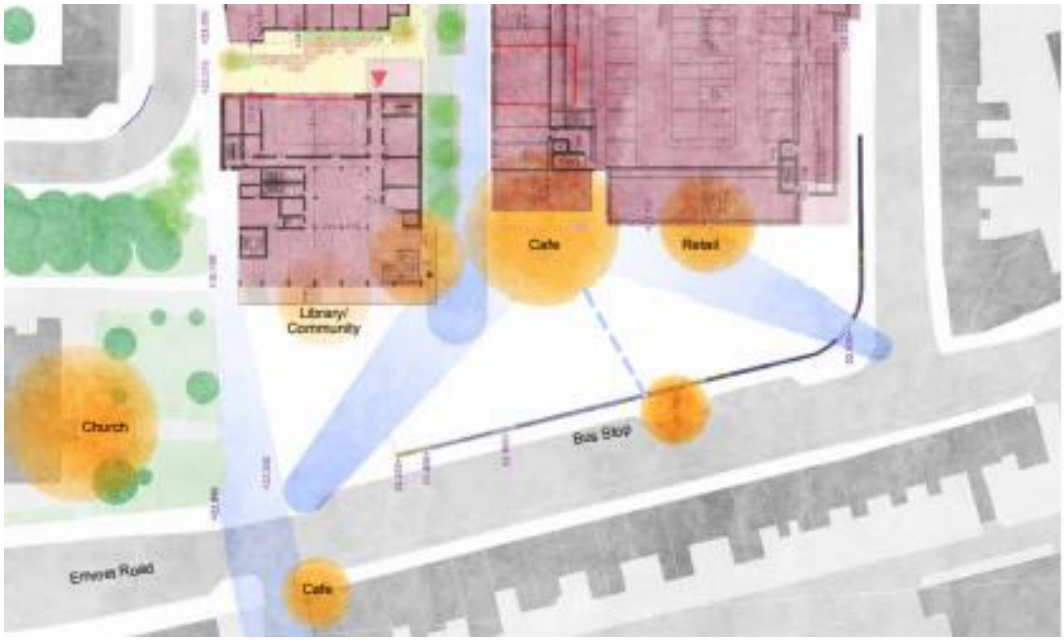
4.1 The project is predominantly residential in nature, comprising c. 574 no. apartments supplemented and supported by community facilities (Library/Community Hub, Creche, Retail/Café units) in a neighbourhood centre which includes a supermarket fronting onto Emmet Road.

4.2 The proposal also includes 50 no. car parking spaces including 3 no. accessible spaces, 30 car share spaces and 10% Electric Vehicle charging points. In addition it is proposed to provide 939 no. bicycle spaces and 293 bicycle visitor spaces. The car parking spaces will be predominantly provided in a Village Mobility Hub located beneath the Supermarket. Car parking spaces will be located adjacent to Goldenbridge Cemetery.

Community and Commercial Elements of Proposed Development[1]



4.3 The supporting community and commercial elements of the proposed development (of some 5,980 sq. m) will comprise:

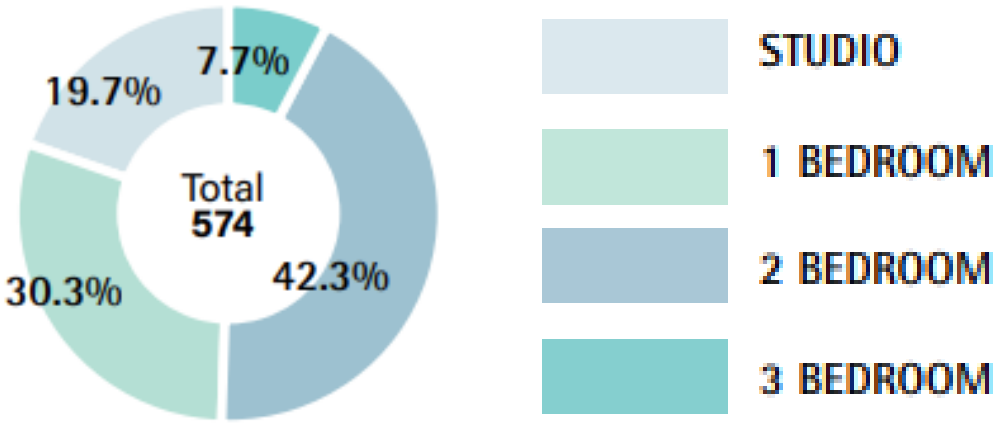


Creche	750 sq. m
Library/Community Hub	2,750 sq. m
Café/retail	150 sq. m
Supermarket	1,500 sq. m
Retail/café units	650 sq. m

[1] [1] Note: May be subject to change arising from further design analysis

Management office	90 sq. m

OVERVIEW OF PROPOSED USES



Residential Element of Proposed Development

4.4 The residential element of the proposed Emmet Road Development will provide a tenure mix of 24% social and 76% cost rental homes. The overall proposed apartment mix is envisaged as follows:

	Studio	1 bedroom	2 bedroom	3 bedroom	Total
Cost Rental Apartments	113	131	193		437
	25.8%	30.0%	44.2%		
Social Apartments	-	43	50	44	137
	0%	31.3%	36.5%	32.2%	
Total	113	174	243	44	574
% Mix	19.7%	30.3%	42.2%	7.7%	100%

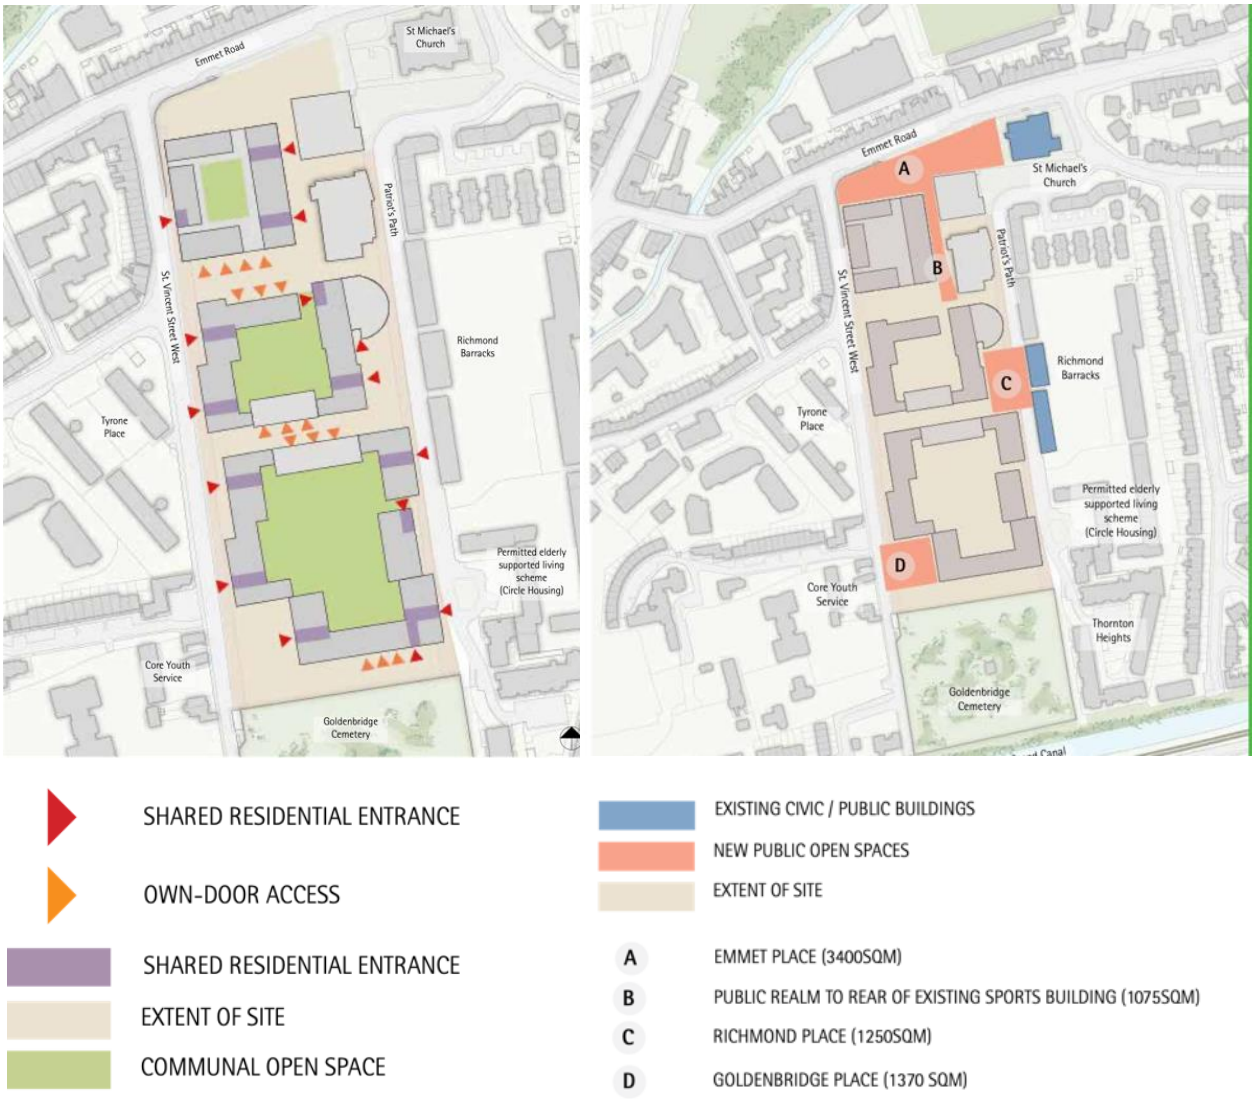


Table 1 Proposed Apartment Mix[2]

[2] Note: May be subject to change arising from further design analysis

Public Open Space/Communal Open Space

4.5 It is proposed to provide c. 7,095 sq. m of public open space (c. 19% of the site) in 4 no. areas distributed through the site as well as communal open space of c. 4,540 sq. m for the residents.

Scale and Massing

4.6 The proposed development is formed around 3 no. communal open space areas in a range of heights of 3,5 and 7 storey elements.

4.7 The EIAR will also include an assessment of the permitted (under Part 8) demolition of the former health centre and St. Michael's community centre and associated site clearance works which include the remains of a disused halting site (located in the northern portion of the subject lands) as well as a connection to Irish Water services from the subject site along Emmet Road for c. 200m to the Blackhorse Bridge located to the west, (adjacent to the Camac River) which will form part of the assessment.

5.0 Response Timelines Project Description Summary

5.1 We would appreciate if you could provide any information relevant to the proposed site that you may have and highlight any likely significant impacts you consider should be addressed within the scope of the EIAR.

5.2 We would be grateful if you could reply by the 27th of June 2022.

% Mix	19.7%	30.3%	42.2%	7.7%	100%

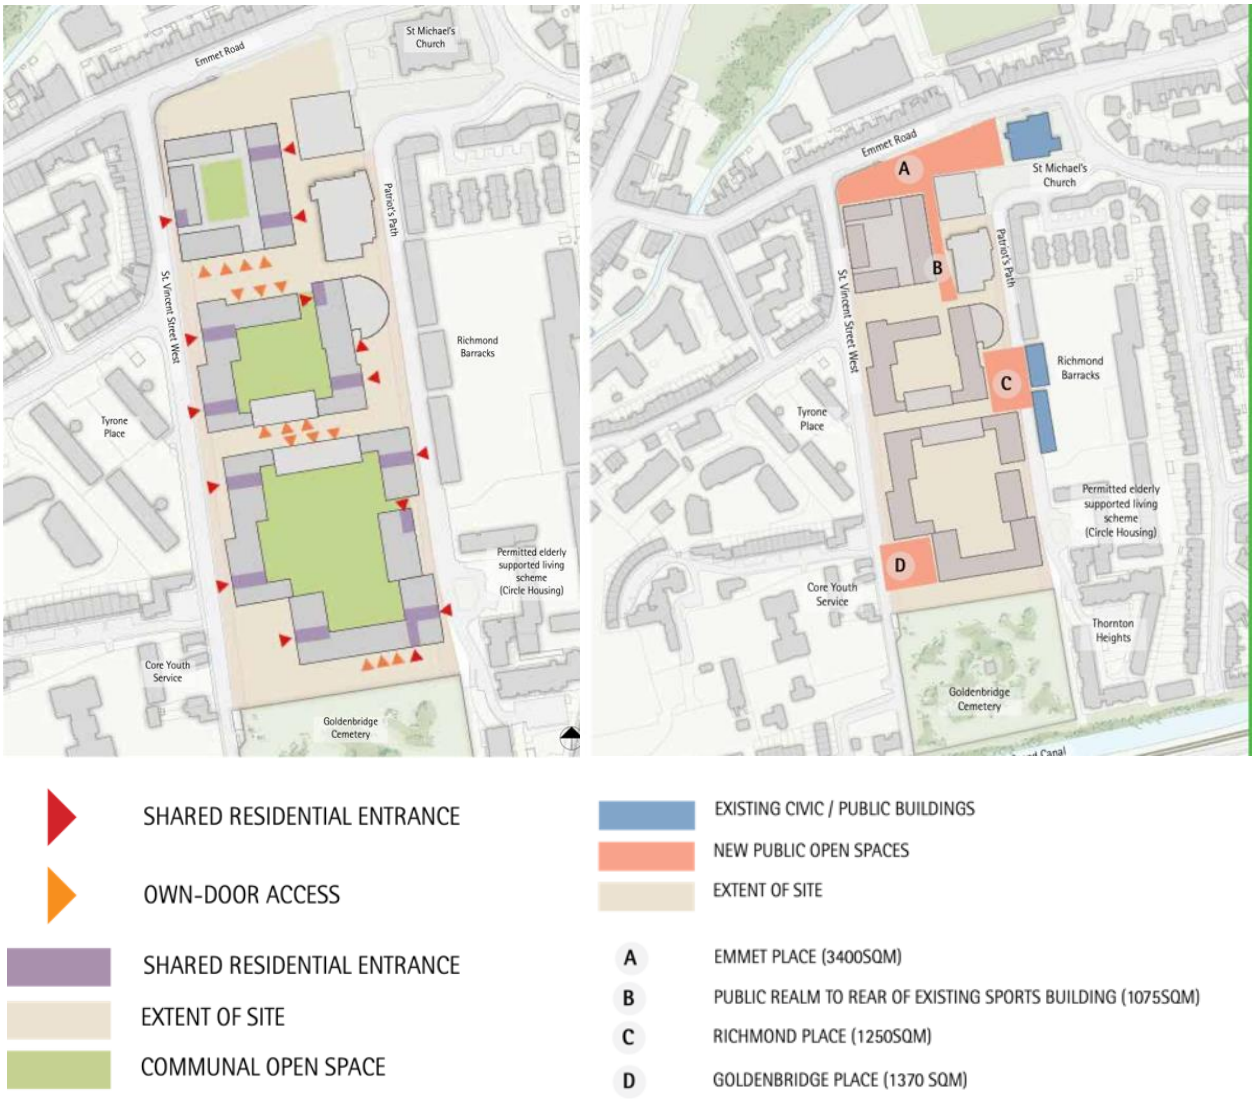

Table 1 Proposed Apartment Mix[2]

[2] Note: May be subject to change arising from further design analysis

Public Open Space/Communal Open Space

4.5 It is proposed to provide c. 7,095 sq. m of public open space (c. 19% of the site) in 4 no. areas distributed through the site as well as communal open space of c. 4,540 sq. m for the residents.

Scale and Massing

4.6 The proposed development is formed around 3 no. communal open space areas in a range of heights of 3,5 and 7 storey elements.

4.7 The EIAR will also include an assessment of the permitted (under Part 8) demolition of the former health centre and St. Michael's community centre and associated site clearance works which include the remains of a disused halting site (located in the northern portion of the subject lands) as well as a connection to Irish Water services from the subject site along Emmet Road for c. 200m to the Blackhorse Bridge located to the west, (adjacent to the Camac River) which will form part of the assessment.

5.0 Response Timelines Project Description Summary

5.1 We would appreciate if you could provide any information relevant to the proposed site that you may have and highlight any likely significant impacts you consider should be addressed within the scope of the EIAR.

5.2 We would be grateful if you could reply by the 27th of June 2022.

5.3 If you require any further information, or clarification please contact the EIA coordinator in John Spain Associates, who is Rory Kunz Executive Director:

Dear Sir/Madam,

RE: EIAR SCOPING RELATING TO PROPOSED PART 10 MIXED USE DEVELOPMENT OF 574 DWELLINGS AND COMMUNITY/RETAIL/COMMERCIAL FLOORSPACE AT EMMET ROAD, DUBLIN 8.

1.0 Introduction

1.1 John Spain Associates has been appointed by Dublin City Council to prepare an Environmental Impact Assessment Report (EIAR) to support a future planning application for a mixed-use development on lands at Emmet Road (formerly St. Michael's Estate), Inchicore, Dublin 8.

1.2 The planning application will be made directly to An Bord Pleanála under the provisions of Section 175(3) of the Planning and Development Acts 2000 (as amended).

1.3 As part of the EIA process, we wish to consult with those statutory and non-statutory bodies that may have an interest in the proposal. We would therefore be grateful if you could provide any information relevant to the proposed site that you may hold, and/or highlight any issues that you feel should be addressed within the scope of the EIAR.

1.4 We have set out hereunder the site characteristics and a brief description of the development proposal in order to provide a strategic overview of the development characteristics.

Registered in Ireland No. 396306. Registered Office: 39, Fitzwilliam Place, Dublin 2. VAT No. IE 6416306U

2.0 Site Location

2.1 Emmet Road is located 4km west of the city centre in Inchicore. The site extends to c. 3.73 hectares is bound to the north by Emmet Road, to the south by the Grand Canal and Goldenbridge Cemetery, to the east by the rear of residential dwellings on Connolly Avenue and Bulfin Court and to the west by St Vincent Street West.

Figure 1 – Site Location

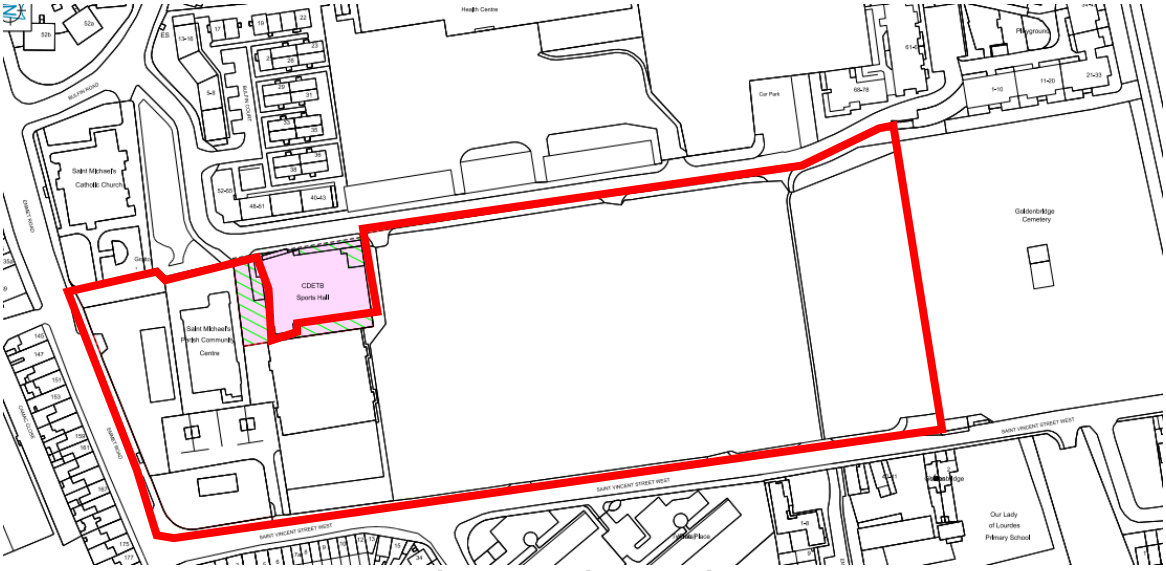

Figure 2 – Site Location

2.0 Background – Government Policy – Cost Rental

2.1 Housing for All - a New Housing Plan for Ireland', published in September 2021, is the government's housing plan to 2030. It is a multi-annual, multi-billion-euro plan which will improve Ireland's housing system and deliver more homes of all types for people with different housing needs.

2.2 Housing for All introduced 'Cost Rental', a new form of public housing in Ireland. The Cost Rental model must relate to affordability for low to middle income earners, for people who are above the social housing income limits, and who wish to rent or are unable to buy their own home.

2.3 The Government plans to provide an average of 2,000 Cost Rental homes per year for the next 10 years. This model of housing is a first in type initiative for Dublin City Council.

2.4 In this regard, the proposed Emmet Road Development will provide a tenure mix of 24% social and 76% cost rental homes

3.0 Planning Context Summary – Dublin City Development Plan 2016-2022

3.1 The site at Emmet Road is zoned 'Z14' – a Strategic Development and Regeneration Area (SDRA) – in the Dublin City Development Plan 2016-2022, with a stated objective *'to seek the social, economic and physical development and/or rejuvenation of an area with mixed use, of which residential and 'Z6' would be the predominant uses."*

3.2 According to the Dublin City Development Plan, the SDRA areas have the capacity for a substantial amount of development in developing areas in the inner and outer city.

3.3 The City Development Plan 2016-2022 contains a number of key guiding principles for this site under the heading SDRA 9 which are set out below.

SDRA9 – Guiding Principles

3.4 The guiding principles for the remaining SDRA lands include:

- *The development of a high-quality, vibrant, mixed-use urban quarter will be promoted; new facilities will be located in accessible locations and will maximise the opportunities to connect with the wider neighbourhood.*
- *The development will complement the regeneration of Inchicore by encouraging a natural extension of the village centre eastwards along Emmet Road; the development will provide strong connections between the site and the functions of the village centre, for which a local environmental improvements plan is proposed.*
- *The development of high-quality streetscape onto Emmet Road with accessible civic spaces, active frontages and an appropriate transition in scale, height and character between the village centre and the site will be promoted*
- *Strong permeability will be sought through the site, including pedestrian and cyclist connections, to achieve strong north-to-south connections between Emmet Road and the Luas/ Grand Canal corridor and east-to west connections between St Vincent Street West and Bulfin Road; active streetscapes along these routes will be promoted.*

- *Variety in housing tenures and unit types will be sought in order to achieve a balanced and sustainable community The important heritage features on, and adjoining, the site, shall be respected and highlighted by urban design with particular regard to the tourism, heritage, community and amenity value of assets such as St Michael's Church, Richmond Barracks, Goldenbridge Cemetery and the Grand Canal.*
- *The important heritage features on, and adjoining, the site, shall be respected and highlighted by urban design with particular regard to the tourism, heritage, community and amenity value of assets such as St Michael's Church, Richmond Barracks, Goldenbridge Cemetery and the Grand Canal.*
- *Innovative proposals that create a landmark destination within the city for combined facilities of a community, recreational, leisure and sports nature will be promoted; such facilities shall integrate positively with the existing sports facilities on site The development of high-quality senior citizen housing. This will be located on the site between Thornton Heights and Richmond Barracks.*

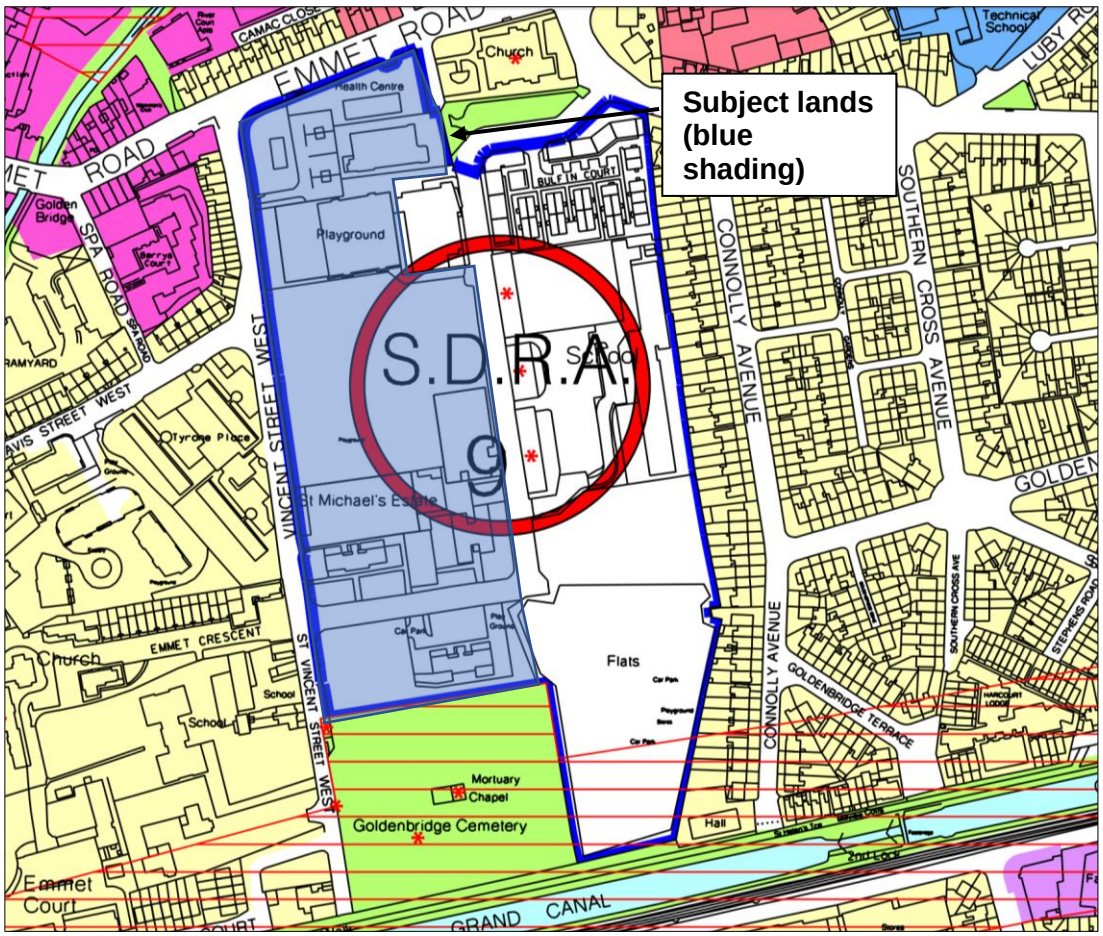

Figure 3 – SDRA 9. St Michael's Estate

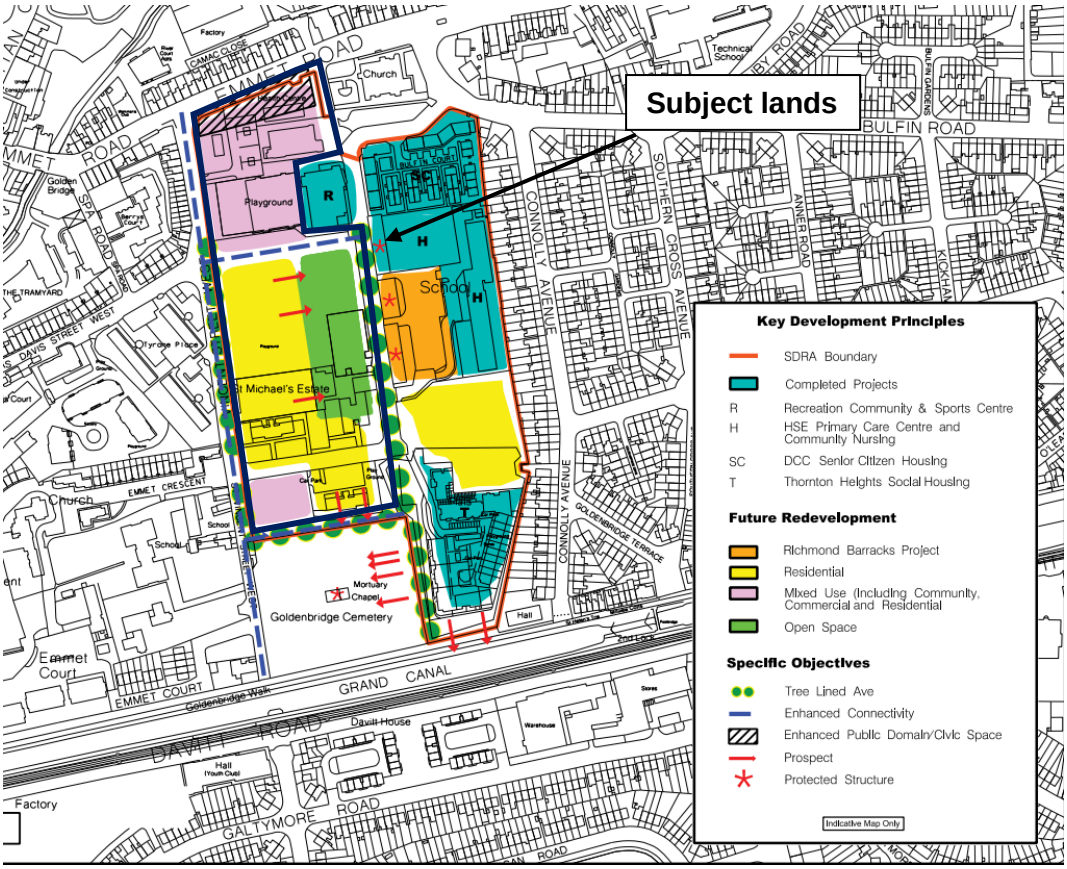

Figure 4 – Key Development Principles (Indicative Land Use Map)

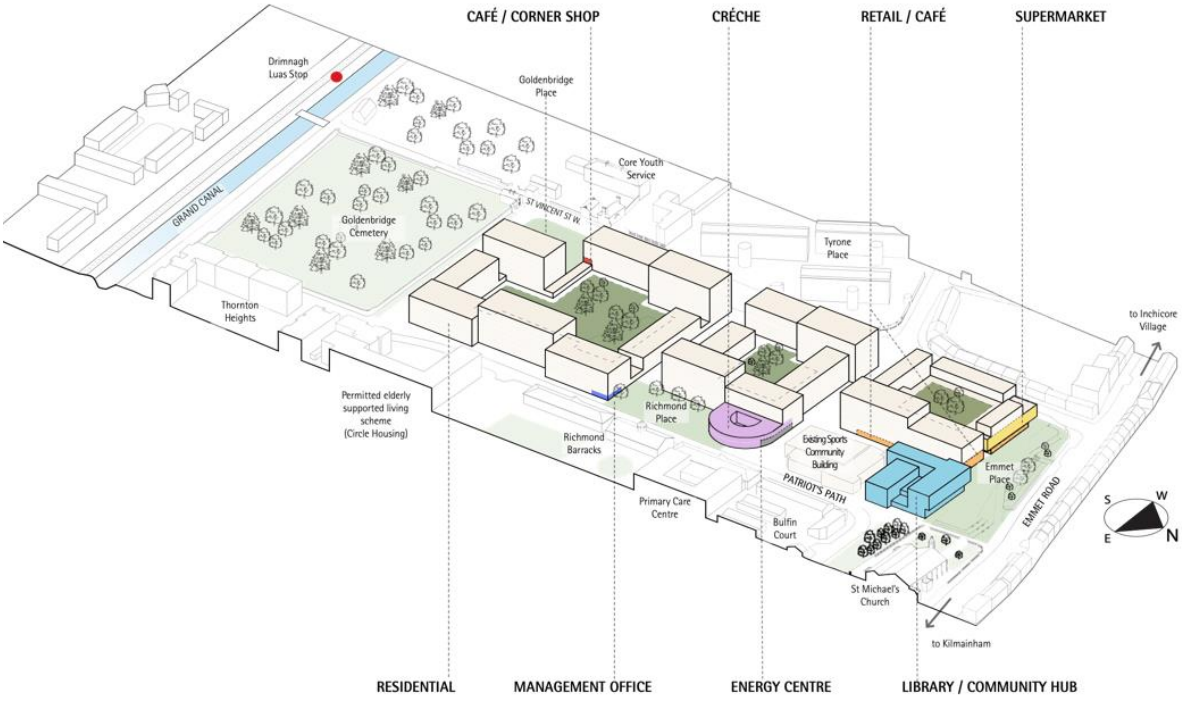
4.0 Project Description Summary

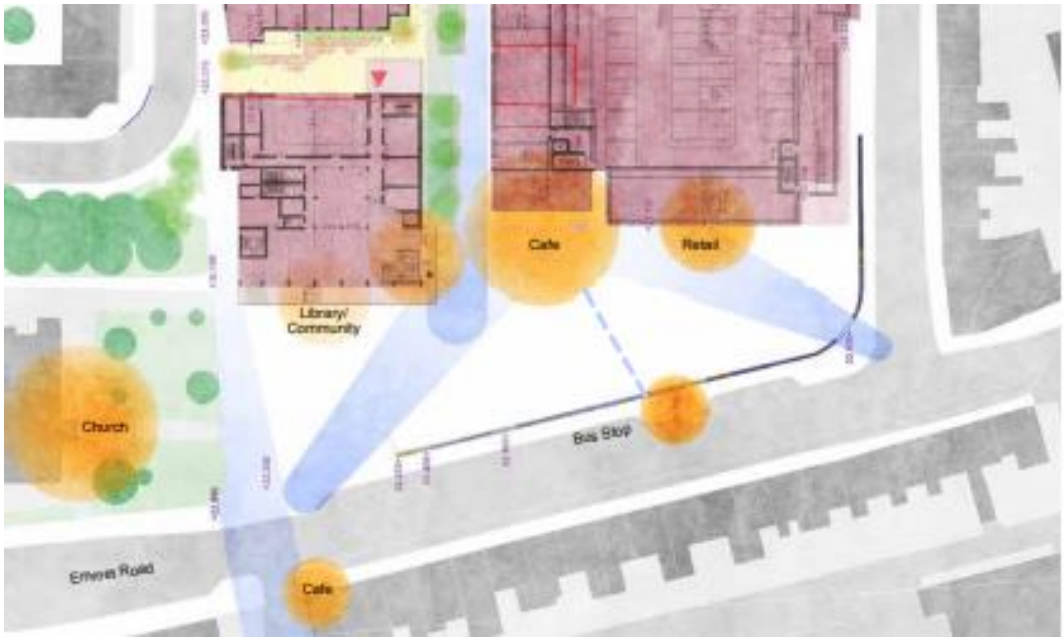
4.1 The project is predominantly residential in nature, comprising c. 574 no. apartments supplemented and supported by community facilities (Library/Community Hub, Creche, Retail/Café units) in a neighbourhood centre which includes a supermarket fronting onto Emmet Road.

4.2 The proposal also includes 50 no. car parking spaces including 3 no. accessible spaces, 30 car share spaces and 10% Electric Vehicle charging points. In addition it is proposed to provide 939 no. bicycle spaces and 293 bicycle visitor spaces. The car parking spaces will be predominantly provided in a Village Mobility Hub located beneath the Supermarket. Car parking spaces will be located adjacent to Goldenbridge Cemetery.

Community and Commercial Elements of Proposed Development[1]



4.3 The supporting community and commercial elements of the proposed development (of some 5,980 sq. m) will comprise:

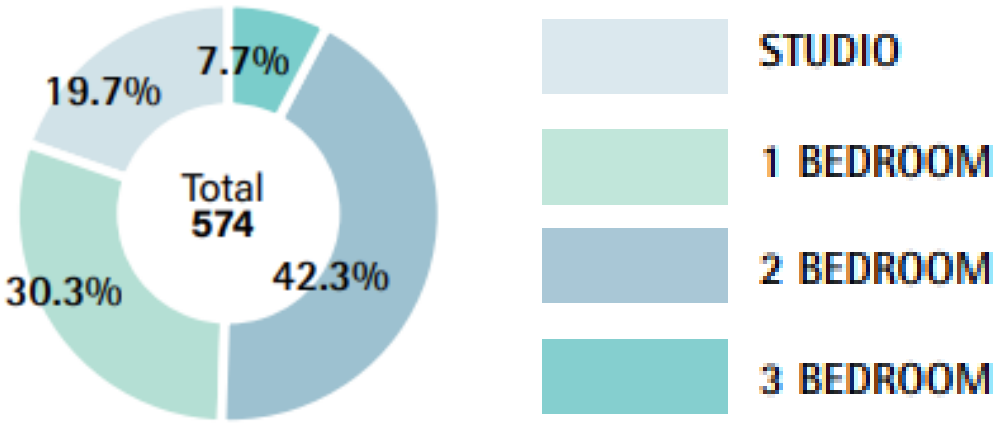


Creche	750 sq. m
Library/Community Hub	2,750 sq. m
Café/retail	150 sq. m
Supermarket	1,500 sq. m
Retail/café units	650 sq. m

[1] [1] Note: May be subject to change arising from further design analysis

Management office	90 sq. m

OVERVIEW OF PROPOSED USES



Residential Element of Proposed Development

4.4 The residential element of the proposed Emmet Road Development will provide a tenure mix of 24% social and 76% cost rental homes. The overall proposed apartment mix is envisaged as follows:

	Studio	1 bedroom	2 bedroom	3 bedroom	Total
Cost Rental Apartments	113	131	193		437
	25.8%	30.0%	44.2%		
Social Apartments	-	43	50	44	137
	0%	31.3%	36.5%	32.2%	
Total	113	174	243	44	574
% Mix	19.7%	30.3%	42.2%	7.7%	100%

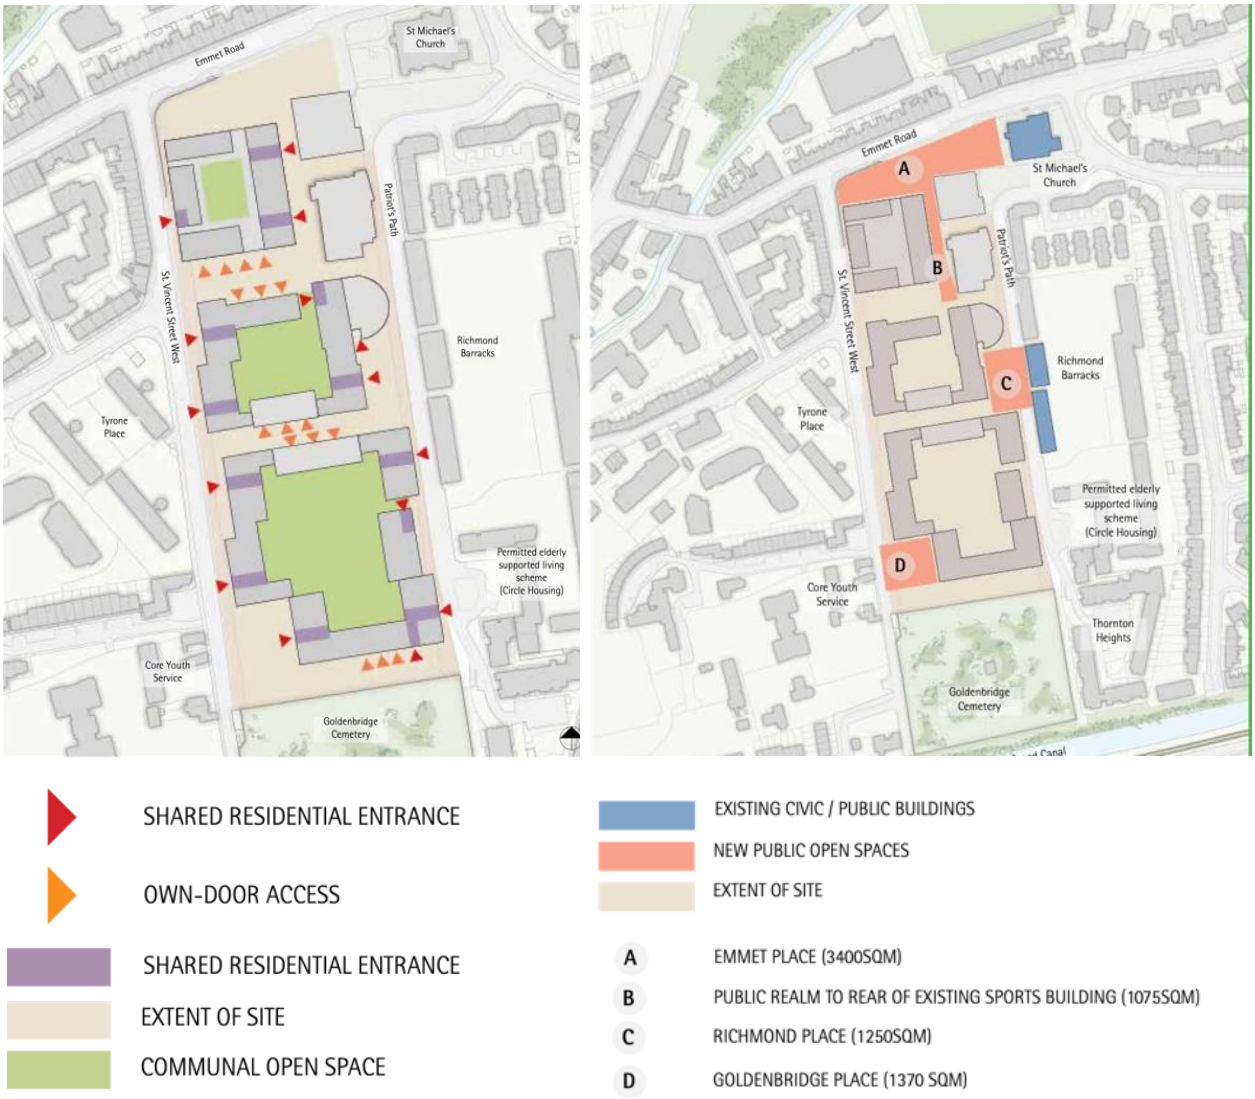


Table 1 Proposed Apartment Mix[2]

[2] Note: May be subject to change arising from further design analysis

Public Open Space/Communal Open Space

4.5 It is proposed to provide c. 7,095 sq. m of public open space (c. 19% of the site) in 4 no. areas distributed through the site as well as communal open space of c. 4,540 sq. m for the residents.

Scale and Massing

4.6 The proposed development is formed around 3 no. communal open space areas in a range of heights of 3,5 and 7 storey elements.

4.7 The EIAR will also include an assessment of the permitted (under Part 8) demolition of the former health centre and St. Michael's community centre and associated site clearance works which include the remains of a disused halting site (located in the northern portion of the subject lands) as well as a connection to Irish Water services from the subject site along Emmet Road for c. 200m to the Blackhorse Bridge located to the west, (adjacent to the Camac River) which will form part of the assessment.

5.0 Response Timelines Project Description Summary

5.1 We would appreciate if you could provide any information relevant to the proposed site that you may have and highlight any likely significant impacts you consider should be addressed within the scope of the EIAR.

5.2 We would be grateful if you could reply by the 27th of June 2022.

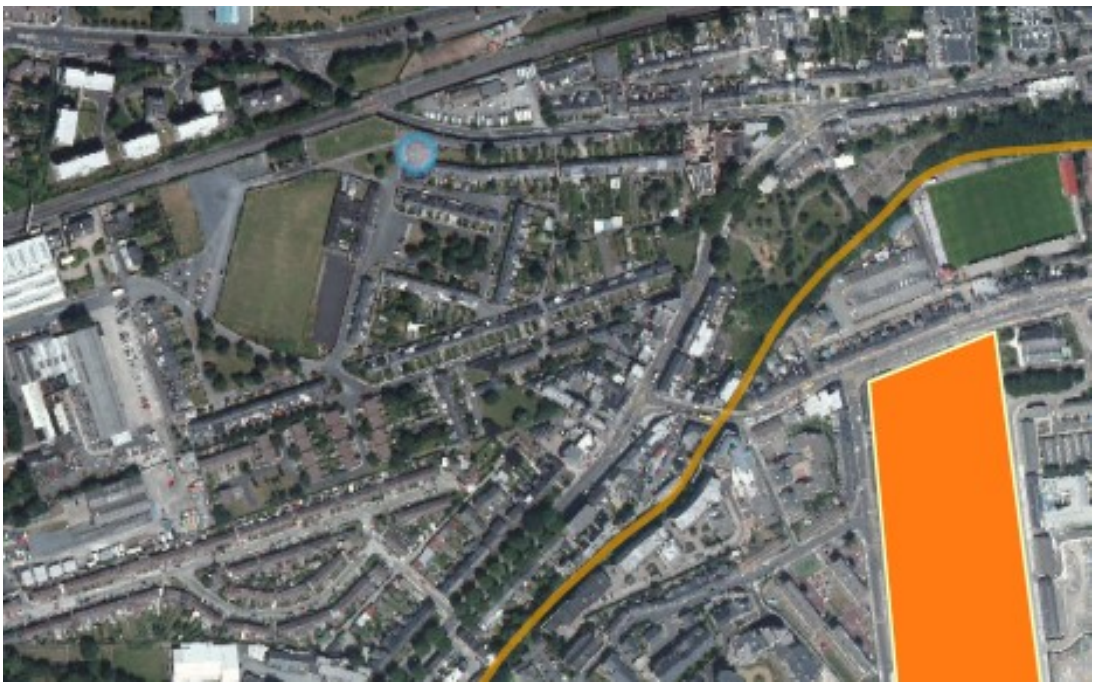
Rory Kunz

From: Matthew Carroll <Matthew.Carroll@fisheriesireland.ie>
Sent: Friday 6 May 2022 14:58
To: Rory Kunz
Subject: FW: DCC Part 10 Development, Emmet Road (formerly St. Michael's Estate), Inchicore, Dublin 8

Dear Rory,

In response to your request to "*provide any information relevant to the proposed site that you may have and highlight any likely significant impacts you consider should be addressed within the scope of the EIAR*", please not the following observations from IFI.



The proposed development is within the River Camac catchment which flows to the west of the site and the Grand canal to the south. The Camac is a recognised salmonid system, under significant ecological pressure predominately due to urbanisation. Although considerable sections of main channel are culverted, sections that remain on the surface invariably support self-sustaining populations of Brown trout (Salmo trutta). The river also supports populations of migratory Sea trout (Salmo trutta) in the lower reaches. Other species include the protected European eel , Freshwater Crayfish (Austropotamobius pallipes) and Lamprey (Lampetra sp.) species, listed under Annex II of the EU Habitats Directive.

The Camac River should not be considered a type of buffering mechanism, or part of any mitigation measures to protect the SAC or SPA which it discharges into via the R. Liffey . There should be nothing other than clean water entering the surface water sewer system which may discharge to the Camac or canal during the construction or operational phase. Mitigation measures to protect the aquatic environment should be solely designed and implemented within the proposed development to ensure there is no negative impact within any of the receiving environments.

If there is any potential for deleterious matter to enter the Camac River or Grand canal during the construction phase through the surface water system or by any other means this should be acknowledged and mitigated against in a site-specific Construction Environmental Management Plan (CEMP). The CEMP should detail and ensure Best Construction Practices including measures to prevent and control the introduction of pollutants and deleterious matter to surface water either directly or indirectly through the storm water drainage network and measures to minimise the generation of sediment and silt.

Ground preparation and associated construction works, including large-scale topographic alteration, the creation of roads, buildings and footpaths, have significant potential to cause the release of sediments and various pollutants into surrounding watercourses.
Construction Practices including measures to prevent and control the introduction of pollutants and deleterious matter to surface water either directly or indirectly through the storm water drainage network and measures to minimise the generation of sediment and silt.
Construction works must be planned in a manner which prevents extensive tracts of soils from being exposed at any time and arrangements must be made for the control and management of any contaminated water resulting from construction.

IFI would encourage that the use of nature based solutions to manage surface water attenuation post construction phase rather than using hard engineering solutions to manage surface water. The Department of Housing, local Government and Heritage have recently published the following interim guidance document on Nature-based Solutions to the Management of Rainwater and Surface Water Runoff in Urban Areas Water Sensitive Urban Design Best Practice Interim Guidance Document which should be considered when designing drainage systems.
https://www.gov.ie/en/publication/10d7c-nature-based-solutions-to-the-management-of-rainwater-and-surface-water-runoff-in-urban-areas-best-practice-interim-guidance-document/

I hope that some of the observations made assist in drafting your EIAR

To: Rory Kunz
Subject: RE: DCC Part 10 Development, Emmet Road (formerly St. Michael's Estate), Inchicore, Dublin 8

Dear Mr. Kunz,

Thank you for your email of 29 April 2022 regarding the above.

Transport Infrastructure Ireland (TII) will endeavour to consider and respond to planning applications referred to it given its status and duties as a statutory consultee under the Planning Acts. The approach to be adopted by TII in making such submissions or comments will seek to uphold official policy and guidelines as outlined in the Section 28 Ministerial Guidelines 'Spatial Planning and National Roads Guidelines for Planning Authorities' (DoECLG, 2012). Regard should also be had to other relevant guidance available at www.TII.ie. TII advise that matters related to Metrolink, future Luas lines and public transport are a matter for the National Transport Authority.

The issuing of this correspondence is provided as best practice guidance only and does not prejudice TII's statutory right to make any observations, requests for further information, objections or appeals following the examination of any valid planning application referred.

With respect to EIAR scoping issues, the recommendations indicated below provide only general guidance for the preparation of an EIAR, which may affect the existing Luas and national road network.

The developer/scheme promoter should have regard, *inter alia*, to the following:

- It would be important that, where appropriate, subject to meeting the appropriate thresholds and criteria and having regard to best practice, a Traffic and Transport Assessment (TTA) be carried out in accordance with relevant guidelines, noting traffic volumes attending the site and traffic routes to/from the site with reference to impacts on the national road network and junctions of lower category roads with national roads.

TII's Traffic and Transport Assessment Guidelines (2014) should be referred to in relation to proposed development with potential impacts on the national road network. The scheme promoter is also advised to have regard to Section 2.2 of the NRA/TII TTA Guidelines which addresses requirements for sub-threshold TTA.

Transport analysis should also consider:

- All road users, not just private cars,
- Modal share targets should be outlined and how any PT/Walking/Cycling modal share is to be accommodated,
- Measures proposed to reduce car dependency should be outlined,
- Consider and address cumulative impacts of other development and impacts on national road capacity,
- A mobility management plan for the development to accompany the transport assessment.

Notwithstanding any of the above, the developer should be aware that this list is non-exhaustive, thus site and development specific issues should be addressed in accordance with best practice.

I trust that the above comments are of assistance in your EIAR preparation.

Yours sincerely,

Alban Mills

Senior Regulatory & Administration Executive

Dear Sir/Madam,

John Spain Associates has been appointed by Dublin City Council to prepare an Environmental Impact Assessment Report (EIAR) to support a future planning application for a mixed-use development on lands at Emmet Road (formerly St. Michael's Estate), Inchicore, Dublin 8.

The planning application will be made directly to An Bord Pleanála under the provisions of Section 175(3) of the Planning and Development Acts 2000 (as amended).

As part of the EIA process, we wish to consult with those statutory and non-statutory bodies that may have an interest in the proposal. We would therefore be grateful if you could provide any information relevant to the proposed site that you may hold, and/or highlight any issues that you feel should be addressed within the scope of the EIAR.

We would appreciate if you could provide any information relevant to the proposed site that you may have and highlight any likely significant impacts you consider should be addressed within the scope of the EIAR.

We would be grateful if you could reply by the 27th of June 2022.

If you require any further information, or clarification please contact me.

Best regards,

Rory

Appendix A2 - Other relevant assessments considered in the preparation of this EIAR

Relevant Legislation	Nature of Assessment	Relevant Assessment
Directive 92/43/EEC, the Habitats Directive	Appropriate assessment comes from the Habitats Directive (92/43/EEC), which seeks to safeguard the long-term survival of Europe's most valuable and threatened species and habitats. The geographical areas of particular importance to these species and habitats have been selected as Special Areas of Conservation (SAC) and Special Protection Areas (SPA) which are collectively referred to (in Ireland) as European sites. Together, these sites comprise the pan-European Natura 2000 network of protected areas. One of the measures which protects these areas is the requirement that every project must undergo an assessment of its implications for any European site before consent for the project is given. Consent for the project can only be given after determining that it will not adversely affect the integrity of the site(s) concerned in view of the conservation objectives of that site.1 In order to determine if an appropriate assessment is required, a screening process must be carried out for all applications for planning permission. The Habitats Directive (92/43/EEC) and the associated Birds Directive (2009/147/EC) are transposed into Irish legislation by Part XAB of the 2000 Act and the Birds and Natural Habitats Regulations 2011. The legislative provisions for appropriate assessment screening for planning applications are set out in Section 177U of the 2000 Act.	An Appropriate Assessment Screening Report prepared by Enviroguide is included with the Part 10 application. The AA Screening Report concludes that Stage 2 appropriate assessment is not required in relation to the proposed development, The Board, as competent authority, will carry out an Appropriate Assessment of the proposed development.
Directive 2000/60/EC, The Water Framework Directive	The Water Framework Directive (WFD) (Directive 2000/60/EC) and The Groundwater Directive (Directive 2006/118/EC) requires all Member States to protect and improve water quality in all waters. The WFD is one of the key overarching instruments in the protection of waters and includes	The EIAR includes a detailed chapter addressing Water, prepared by OCSC. Chapter 6 states the following:

	subordinate directives or water-related legislation that complement or have been developed in response to, or coherent with, the requirements of the Water Framework Directive. The WFD requires 'Good Water Status' for all European waters to be achieved through a system of river basin management planning and extensive monitoring by 2015 or, at the least, by 2027. 'Good status' means both 'Good Ecological Status' and 'Good Chemical Status'. The WFD does not require site specific assessments to be undertaken by a developer. It lays down standards for the quality of designated waters ("guide" values as well as "imperative" values) and requires Member States to monitor the quality of designated waters and to take measures to ensure that they comply with the minimum standards1.	The proposed development site lies within the Discussion within the Water Framework Directive (WFD) on the river Camac notes the river as being currently classified with a Moderate Status in the upper reaches and Poor Status in the lower reaches (i.e., in the vicinity of the subject site). It is further noted that significant interventions will be required in order to achieve Good Status and address the many pressures on the waterbody, which exist because of human activities. Subject to the mitigation set out within the EIAR, it was determined that the development would not give rise to any significant impact on water or affect the status of any watercourse under the Water Framework Directive.
Directive 2001/42/EC, The SEA Directive	The Strategic Environmental Assessment (SEA) Directive 2001/42/EC, on the assessment of the effects of certain plans and programmes on the environment requires that an environmental assessment is carried out of certain plans and programmes which are likely to have significant effects on the environment. Public plans and programmes that are likely to have significant effects on the environment must have a Strategic Environmental Assessment (SEA). The SEA Directive (2001/42/EC) is implemented in Ireland by the European Communities (Environmental Assessment of Certain Plans and Programmes) Regulations 2004 (SI 435/2004) and the Planning and Development (Strategic Environmental Assessment) Regulations 2004 (SI 436/ 2004), as amended. There are no specific assessments required by the developer under the	The SEA for the relevant CityDevelopment Plan incorporates mitigation to minimise the impact of the plans on the environment. The policies of the plan were formulated with regard to the SEA processes undertaken. The subject site was designated for the nature and form of development proposed under the relevant plan, which has been subject to SEA. This is addressed in further detail in the context of the assessment of alternatives within Chapter 2 of this EIAR.

	SEA Directive in respect of the current SHD application on site. SEA has been undertaken by the relevant authority in respect of the South Dublin County Development Plan 2016-2022 and Draft South Dublin County Development Plan 2022-2028.	
Directive 2002/49/EC, regarding environmental noise	The Environmental Noise Directive 2002/49/EC relates to the assessment and management of environmental noise; this is the main EU instrument to identify noise pollution levels and to trigger the necessary action both at Member State and at EU level. The Directive requires Member States to prepare and publish, every 5 years, noise maps and noise management action plans for: agglomerations with more than 100,000 inhabitants major roads (more than 3 million vehicles a year) major railways (more than 30.000 trains a year) major airports (more than 50.000 movements a year, including small aircrafts and helicopters) When developing noise management action plans, Member States' authorities are required to consult the concerned public. Relevant bodies develop noise action plans that we consider as appropriate.	Chapter 8 of this EIAR for this Part 10 comprises an assessment of noise and vibration impacts associated with the development. The noise assessment undertaken as part of the EIAR, has regard to the relevant provisions of Directive 2002,49/EC.
Seveso Directive (Directive 82/501/EEC, Directive 96/82/EC, Directive 2012/18/EU)	The Seveso Directive (Directive 82/501/EEC, Directive 96/82/EC, Directive 2012/18/EU) was developed by the EU after a series of catastrophic accidents involving major industrial sites and dangerous substances. Such accidents can give rise to serious injury to people or serious damage to the environment, both on and off the site of the accident.	The subject lands are not proximate to any Seveso designated sites. The surrounding context consists of a mix of residential cultural, cemetery and commercial lands. It does not include any man-made industrial processes (including SEVESO II Directive sites (96/82/EC & 2003/105/EC) which might result in a risk to human health and safety. From a review of the Dublin City County Council Development Plan Map E there are no SEVESO Site as defined by the Health and Safety Authority, on the subject site of the proposed development, in the immediate vicinity, or in the surrounding Inchicore Village.

	The Chemicals Act (Control of Major Accident Hazards involving Dangerous Substances) Regulations 2015 (S.I. No. 209 of 2015) (the "COMAH Regulations"), implements the latest Seveso III Directive (2012/18/EU). The purpose of the COMAH Regulations is to transpose the Seveso Directive into Irish law and lay down rules for the prevention of major accidents involving dangerous substances, and to seek to limit as far as possible the consequences for human health and the environment of such accidents, with the overall objective of providing a high level of protection in a consistent and effective manner.	Furthermore, there are no substances to be stored as part of the proposed development that would be controlled under Seveso Directive of COMAH Regulations. Due to the separation distance from the proposed development site to the nearest site controlled under the Seveso Directive, and the fact that it lies outside the consultation zone, there are no specific assessments required by the Applicant under the Seveso Directive or COMAH Regulations.
Directive 2008/50/EC, the clean air for Europe directive	The Clean Air for Europe (CAFE) Directive 2008/50/EC is the prevailing legislation to improve the quality of air in Europe and limit exposure to air pollution. The CAFE Directive set rules including how to monitor, assess, and manage ambient air quality. Overall, the main objective of the CAFE Directive is to reduce human and environmental exposure to air pollutants and ensure that the limits of values and thresholds are not exceeded. The CAFE Directive was transposed into Irish legislation by S.I. No. 180/2011 - Air Quality Standards Regulations 2011. The CAFÉ Directive mandates the location and quantity of air monitoring stations that Environmental Protection Agency (EPA) should undertake ambient air monitoring. If there is an exceedance of the ambient limit value an Air Quality Action Plan must be developed by Local Authorities in conjunction with the EPA. Chapter 9 of this EIAR includes an assessment of air quality and	Due to the nature of the proposed development, there are no specific assessments required by the applicant under the CAFE Directive for the Proposed Development. The air quality and climate assessment undertaken as part of the EIAR, which had regard to the relevant provisions of Directive 2008/50/EC, concluded that no significant impacts would arise subject to mitigation

	climate impacts associated with the development. The analysis and findings within that chapter of the EIAR were made with regard to the provisions of Directive 2008/50/EC.	
Directive 2007/60/EC, regarding the assessment and management of flood risks	The Floods Directive (Directive 2007/60/EC) establishes a framework for the assessment and management of flood risks, with the aim to reduce the adverse consequences on human health, the environment and material assets. The Floods Directive requires Member States to assess if all water courses and coast lines are at risk from flooding, to map the flood extent and assets and humans at risk in these areas and to take adequate and coordinated measures to reduce this flood risk. The Floods Directive also reinforces the rights of the public to access this information and to have a say in the planning process. The Floods Directive must be implemented in tandem with the WFD. In Ireland, the OPW is the national authority assigned with the implementation of the Floods Directive, which was transposed into Irish law by the EU (Assessment and Management of Flood Risks) Regulations SI 122 of 2010.	Dublin City Council undertook a Strategic Flood Risk Assessment as part of the Development Plan preparation process, which zoned the subject site for the nature of development proposed. The application is accompanied by a detailed Site Specific Flood Risk Assessment Report prepared by OCSC Consulting Engineers. All proposed residential and commercial development within the subject site is located within Flood Zone C, and there is low to very low residual risk of flooding of any sort on site.

Public Consultation 2020

Initial Research - 22nd December 2020

The initial; research shown that Inchicore has been surveyed extensively in the past. The Nolan Report 2019 was referenced as well as the St. Michaels Estate Land Initiative 2017 the audit of community facilities and services by the Dublin city Council. The research was then primarily gathered by the DCC by foot, walking around the area. All the relevant information was gathered and then layered together on to a map. This map shows all community facilities, schools, residential buildings, and all open spaces. The information gathered then goes on to show the sense of place in Inchicore and explains the historic importance of the Richmond barracks.

Public Consultation 2021

22nd February 2021 - Summary of Survey Results December 2020

A summary was undertaken in December 2020. The title of this survey was 'What is Next for Emmet Road?'. This public consultation survey objective was for the community of Inchicore/Kilmainham to share their insights and ideas with the Integrated Design Team on the proposed development at Emmet Road. The second objective was to support DCC, and the design team address any gaps related to the studies (e.g., community resource mapping) that have been undertaken for the design process so far.

The purpose of this survey was to provide the opportunity to the residents, visitors, and local stakeholders of Inchicore/Kilmainham an opportunity to share their insights and ideas with us on the proposed Dublin City Council Mixed Use Urban Quarter including Cost Rental and Social Accommodation on the site.

The methodology of the survey had to be altered to fit with the COVID-19 pandemic. To achieve the best results the survey was rolled out three-fold via online survey, a hard copy survey and telephone survey. Each method had to capture the publics insights and potential areas for concern. To gather further information a simplified and shorter version of the survey was prepared for the local schools.

The structure of the survey was created using five keys 'design layers', these layers then correspond to various aspects the design of the project will need to address.

Attractive Vibrant Neighbourhood

Connected Lining Community

Healthy Homes

Affordability over time

Resilient

The results of this survey were then given in a report that was made public via the Emmet Road website. The public survey received a total of 870 responses (this includes 208 responses received of the young person-friendly survey). 380 surveys were also collected in hard copy format.

The survey concluded that the information gathered will feed into the design development process.

24th March 2021 - Online Worksheet Report, January 2021

The report summarises the findings from the second survey carried out of the Inchicore community. It was conducted in January 2021, as a final element of the first phase in the consultation process. The upcoming second, third and fourth phases will look at the preliminary design layouts and continue through to the detailed designs. Throughout this process, the insights gathered at each phase are shared with the Design Team who incorporate what they can and present their design progress at the next phase.

The responses to each of the surveyed questions gave insights of what people enjoy about the area and what they believe to be missing and what improvement could be made. The summary of the results of the survey are presented using both bar charts and anonymised direct quotation for each the questions asked.

The survey identifies the need for improved amenities, community, and retail facilities along with upgrades to cycle and pedestrian infrastructure. The responses from this survey were equally as beneficial as the previously conducted survey, the community consultation will continue as the design develops into the next set of phases as well as online meetings and outdoor exhibitions.

20th April 2021 - Online Consultation Event

The online consultation took place with the design team chairing the meeting, consisting of, architects, landscape architects, conservation architects, civil, structural, and mechanical, electrical engineers, town planners, quantity surveyors all working with Dublin City Council to create the new development at Emmet Road. They followed the design layers in their design process to allow a better understanding of the project.

The design research was used to create a master plan that includes all the Inchicore area. This includes all the relevant residential buildings, civic buildings, open spaces, sports facilities, gardens, and childcare. The BMCEA presentation then goes on to explain what will be included in the development and the new facilities available for the neighbourhood, that includes a civic hub of a library and community centre, a supermarket, small retail units, and a café.

The development will use open green spaces to improve connectivity, between Emmet Road and Goldenbridge Cemetery a series of connected communal green spaces for the public and residential community will create orienting points, anchored by the historic fabric around the site and forming a pedestrian green north-south spine.

The design layout hopes to achieve a level of permeability as well as neighbourhood mobility. These mobility hubs are created to be pedestrian friendly to move away from car dependency. The design layers of resiliency, quality and value are important, but the presentation then asks, how are we going to build this development? This refers to the resources required for the building materials of the site. And how to build this in the most environmental way possible. Each building must also be energy efficient, so the development values the importance of sunlight.

21st April 2021 - Outdoor Exhibition at Richmond Barracks

There was an outdoor exhibition installed at Richmond Barracks this was intended to be a temporary instillation but has developed into a permanent one. It will evolve over time with extra panels added, detailing designs amended based on public recommendations. The outdoor exhibition is an information display of the design of the proposed site and gives the community the change to summit feedback. The intention of this public information display is to add panels for every consultation phase. Each panel is spread out to provide the opportunity to social distance as well as a public seating bench.

26th April 2021 - 'Your Favourite Place to Play' - Pupil Drawings

Connect the Dots on behalf of Dublin City Council (DCC) aided in putting together the public information website and involved the local primary schools with the public consultation. They contacted three local schools: Our Lady of Lourdes NS, Inchicore NS and Gaelscoil Inchicore. They gave the students the job of drawing out, ‘your favourite place to play.’ Each student drew out places previously mentioned on the Community Audit of Emmet Road with such areas coming up as St. Patricks Athletic FC, Phoenix Park, Inchicore Park, and the war memorial gardens. The connect the dots group then complied with the drawings and created a video displaying all the children’s artwork.

26th April 2021 - 'The Dream Hangout Spot' - Core Youth

TikTok is a social media platform for creating, sharing, and discovering short videos, a TikTok was made for the Emmet Road development. This short video made by the Core Youth centre goes through and explains what will be included in the new development

27th September 2021 - Outdoor Exhibition Now Available to View

The outdoor exhibition was made available.

21st October 2021 - Feedback Survey Deadline Announcement

The deadline to fill in the feedback online survey for the next outdoor exhibition was announced to be November 10th, 2021. QR codes were put up around Inchicore and linked the user to the online survey.

29th November 2021 - Emmet Road Drone Video

Dublin City Council commissioned a drone video to be taken of the Emmet Road Development Site. This video shows the site relevant to the red line LUAS as well as Inchicore village.

29th November 2021 - Outdoor Exhibition Feedback Phase Two Consultation Report

This report summarises the community survey with the close of submission date 10th of July. The survey was used to collect feedback on the outdoor exhibition which displayed Buchholz McEvoy's preliminary design proposal for Emmet Road. The survey results, combined with feedback from the community received during the stakeholder engagement process, will be used to inform the future design of the development. The survey questions were based on information provided by Buchholz McEvoy displayed on information panels outside Richmond Barracks. The timeline of the project is as follows.

Social Media Campaign- January

IRFC Meetings- Monthly throughout

Flyer Distribution- February

Window Display- March

Youth Workshop- April

Outdoor Exhibition- May

Surveys – October

Phase Two Report- November

The survey itself received 28 responses and provided an opportunity for respondents to have their say on the design proposals for Emmet Road. Brief questions were also included to identify the various cohorts that participated e.g., age, nationality & their relationship with Inchicore. Concerns were expressed on certain topics that were addressed by the outdoor exhibition. The following topics were raised: community facilities, site permeability and use of open space, housing models management and maintenance, safety in the community and traffic and parking.

Public Consultation 2022

9th March 2022 Webinar | Concept Design Presentation

The online seminar was held to allow members of the public attend that could not make it to the previous in person meetings. This online seminar was then recorded and made available on the Emmet Road Development website.

It began by introducing the development of 548 build-to-rent apartments and its partnership with the Inchicore re-generation group. That states that they do not want this development to compromise the existing open space. The speaker then explained that a mixed-use development that will include a supermarket, café and many more amenities are not just for the new residents but for the pre-existing residents of Inchicore. The presentation then moved on to the topic of statutory planning context before talking about the scale and massing of the buildings. The presentation stressed the importance of open space and how this development will not compromise the community's pre-existing open space.

The permeability of the site was mentioned as well as the community hub and library. It then went on to explain that the idea behind this site was not to make it accessible by car but accessible via public transport as well as emphasising pedestrian access.

The online seminar then moved on to the apartment layout scheme and the sustainability of the buildings themselves by making them affordable as well as including a biodiversity section in each apartment courtyard. The presentation finished by discussing the planning timeline before opening the floor to questions.

The first question asked was concerning antisocial behaviour. The answer that given explained that the mixed income of the apartment's residents will create a balanced population. The high-quality public lighting and the permeability of the site will make it more inviting and less likely to create antisocial behaviour. The separation of public and private spaces within the development will also stop public issues such as loitering.

The next question was concerning the influx of people that will create issues for locals concerning the lack of public amenities. The response to this was that the development is mixed-use. The development itself will be providing more amities then are currently on offer in the area. Not only this but the development is focuses on pedestrian access and promoted the use of public transport rather than private car usage so therefore is not impacted the road infrastructure. This led to the issue of not enough public transport within the area. The solution is a new policy the government that has come out. The policy aims to move towards more sustainable public transport access as well as improving cycle paths.

The following question raised was concerning a 5-a-side football pitch located on the development site that will be removed to make space for public open space in the apartment blocks. There were talks to keep it however there was not enough land to fill pre-existing requirements of open space due to the size of the development, however, DCC has been tasked with finding a replacement pitch near by.

The final question of the online seminar was concerning the rationale of the housing mix. The panel responded to this by explaining that the policy for greater provision of apartment mix development follows the DCC guidelines and caters for demand. These apartments have not been built for typical nuclear families. The apartment schemes are more transient in nature as this is a form of a new housing model.

Phase 3 Public Consultation March 2022 Design Layout

Buchholz McEvoy Architects prepared a presentation for the development at Emmet Road.

The design proposals took on board comments made from the surveys taken in phase two of the development in their design concept. It shows the overview of the proposed units followed by the statuary planning context of the Dublin City Development Plan 2016-2022. With the goal of creating an attractive vibrant neighbourhood the design lays out the scale and massing of the proposed building heights. Then moves on to show the public open space with the goal to create new public open spaces that spatially frame a dialogue between the new architecture and the existing architecture of Richmond barracks, Goldenbridge cemetery and St. Michael's church, paired with the designed permeability of the site will aid in achieving an attractive vibrant neighbourhood.

The next layout of the design proposal theme is creating a connected living community. The development hopes to achieve this through active street edges with a mix of own-door access to homes and shared entrances to apartments at ground floor level provide passive surveillance. To support the multi-modal, sustainable mobility strategy the development will have limited car park spaces with a focus on bicycle spaces and a strong connection to public transport modes. A strong focus will be put on pedestrian access.

Communal open space will be provided for the residents in the form of internal courtyards as well as rooftop gardens. The development is a mixed-use urban quarter that will front onto Emmet Road such as a mix of accessible community, civic, retail and a café. The facilities will include a community venue, opening onto shared public realm space to the south. an atrium / living room adjacent to shared entrance with flexible uses and space for exhibition, a multipurpose room for meetings and activities, a community kitchen, an adult lending area as well an area for studying and reading.

The next layout of the design proposal is healthy homes, the document then depicts each apartment layout and how each will achieve this goal.

the last layout of the design proposal is resilient sustainable design, to achieve sustainability buildings there is four subheadings: sustainable water management, site energy strategy, sustainable homes, and climate responsive designs.

EXECUTIVE SUMMARY

Phase 3 Public Consultation for the Emmet Road Mixed Use Development was launched by Dublin City Council on 8th March and concluded on 31st March, 2022. Connect the Dots embarked on a stakeholder engagement process to ensure that they worked closely with the local community.

The relaxation of Covid19 restrictions allowed in person events to take place for this third phase, unlike the previous two phases which were restricted to online sessions rather than face-to-face meetings. Phase 3 Consultation events included a combination of public information sessions and youth workshops in Richmond Barracks and a webinar.

The third phase presented the concept design proposals to the community, giving them an opportunity to review the information and provide feedback in various formats. The concept design proposals were made available on the project website www.emmetroad.ie in advance of the consultation events commencing. This allowed the public to view the designs, complete an online survey and submit feedback with comments and ideas they wished to share with the project team.

Paper copies of the feedback forms were available at all the in-person sessions and on request distributed by hand in the locality. Considering the risks of Covid-19 and in the interest of public safety and managing the number of attendees, interested persons were asked to register online. Although not a requirement it was beneficial for managing the events.

Those who registered online were invited to complete a short survey of three questions (below) related to the project.

1. How do you feel about the project?
2. What is your relationship to the area?
3. What are your biggest concerns about the project?

The information submitted in advance of the events gave the project team a sense of stakeholders' attitude to the project.
The results from the survey above can be found in the section on ***Feedback Analysis & Reporting***

EXECUTIVE SUMMARY *(continued)*

PHASE THREE CONSULTATION EVENTS

There were a number of events organised for this phase of the public consultation offering both in person and online options catering for all age groups.

These included:

- *Public Information Sessions in Richmond Barracks:*
  - *March 12th 2022*
  - *March 15th 2022*
  - *March 29th 2022*

- *Webinar:*
  - *23rd March 2022*

- *Youth workshops in Richmond Barracks with members of Core Youth Services:*
  - *30th March 2022*

Public Information Sessions

Three in-person sessions were organised during the Phase 3 period. They were scheduled over three different dates at different time slots to cater for attendees at weekends, weekday lunchtime and late evening.

- *Saturday March 12th @ 12 noon- 2pm*
- *Tuesday 15th March @11am – 1pm*
- *Tuesday 29th March @ 7pm – 9pm*

Webinar

An informational webinar took place on 23rd March at 7pm with 38 attendees. This included a presentation from the project architects, Bucholz McEvoy of the concept design for the Emmet Road Development. This was followed by a moderated live questions and answers session, chaired by Connect The Dots.

A recording of the webinar in full, was published on the project website within days of the live event occurring on 23rd March.

EXECUTIVE SUMMARY *(continued)*

Youth Workshops

Throughout all the consultation phases of the project it has been very important to connect with young people who live in this area. Early in the consultation we developed a relationship with Core Youth service, an independent community-based youth service who provide informal education and a range of activities for youths in the area and are based in Inchicore, adjacent to the site.

Together we arranged youth-focused workshops to engage with young members of the community who helped us gain a better understanding of what facilities and amenities they expected the new development to deliver to meet their needs. The events took place in Richmond Barracks on March 29th catering for both secondary and primary school age groups separately:

- *Secondary Age Group @ 1pm-2pm*
- *Primary Age Group @ 2:30pm-3:30pm*

The feedback from the Youth Workshops highlighted the demand for sports facilities, a bicycle workshop and hang- out spaces with shelter and free Wi-fi along with the provision of appropriate new community facilities and amenities suitable for all age groups.

The youth workshops concluded the events of Phase 3 Consultation, however the deadline for the submission of online and written feedback ran until 31st March.

EXECUTIVE SUMMARY *(continued)*

KEY FINDINGS

The main issues raised at both the open information sessions and submitted via written feedback are listed below in order of priority:

Height, Density & Tenure Mix (22.7%)
Some stakeholders expressed concerns in relation to the proposed height of the apartment blocks and overall site density while other members of the public had a preference for taller blocks and increased density to address a lack of high-quality housing in the area.

The issue on tenure mix related to the percentage split between the social and cost rental accommodation. Some stakeholders felt the percentage of social units should be increased while others looked to reduce the quantity and increase the number of cost rental units in order to meet the growing demand for affordable accommodation.

The justification for the unit mix and social housing mix was also questioned. Some supported the large quantity of one- bedroom units in the scheme while others looked for less with an increase in the number of three -bedroom units to facilitate families.

Safety & Security (16%)
The issue of safety and security has been an ongoing concern raised in the community feedback throughout the three phases of consultation to date. Stakeholders questioned whether or not the project would address the existing problems with crime and anti-social behaviour in the area or whether the design of the new scheme would create safety and security issues that would add to the current problems.

Impact on Traffic, Transport & Parking (14.7%)
Many of the comments related to traffic, transport and parking were focused on the existing issues of serious traffic delays in the area, the capacity of the Dublin bus and LUAS service and the current lack of provision of car-parking around Inchicore.

While respondents seemed generally positive about the proposed mobility strategy; moving away from a model of one car per household to address environmental and sustainability concerns, they also expressed the need to consider members of the community who were vehicle dependent whether for employment purposes or mobility related issues.

In relation to the proposed number of residential car parking spaces for the scheme (c.55), it was felt that this may add to the transport problems that already exist and therefore the need to improve public transport in the area is very important.

Management & Maintenance (9.3%)
The future management and maintenance of the development was an issue of concern raised by many stakeholders. Dublin City Council's level of expertise in the management of social housing developments was questioned.

The feedback emphasised the importance of implementing a robust management strategy for the success of the Emmet Road Development - in particular learning

from mistakes of the past and looking to examples of well-established management models used in other similar developments.

In addition to the above there were other general issues in relation to the project provided in the feedback:

Request for Additional Information & Updates (18.7%)
Some of the comments related to the request for design information not currently available at this early stage of the design development.

Project Timeline (12%)
These comments related to the start and finish dates and the overall duration of the project.

The remaining 6.7 % of the feedback related to a mixture of issues, some of which are outlined below.

- Suggestions for the type of new community facilities and services the community would like the scheme to provide.
- Biodiversity & Sustainability
- Quality of Construction & Materials

To read the feedback in more detail please refer to ***Appendix D: Feedback Records.***

Similarly to issues outlined above, there were a number of related discussions at the webinar Q&A. These included:

- Anti-Social Behaviour
- Facilities & Amenities currently in the area
- Rationale for Parking & Potential increase in the demand for Public Transport
- The removal of the existing football pitches at the rear of St Michael's Community Sports Centre
- Rationale for unit mix and housing type
- Tenure Mix
- The potential use for roof space in the development

The actual questions asked on the evening of the event in relation to the above topics along with the answers provided at the webinar are available to read in ***Appendix C: Webinar Q&A.***

The remainder of this report details the events of Phase 3 Consultation for Emmet Road and summarises the findings from all the public engagement that took place along with all the submissions received. The information gathered provides the design team with an insight into the opinions, concerns and expectations of the key community stakeholders.

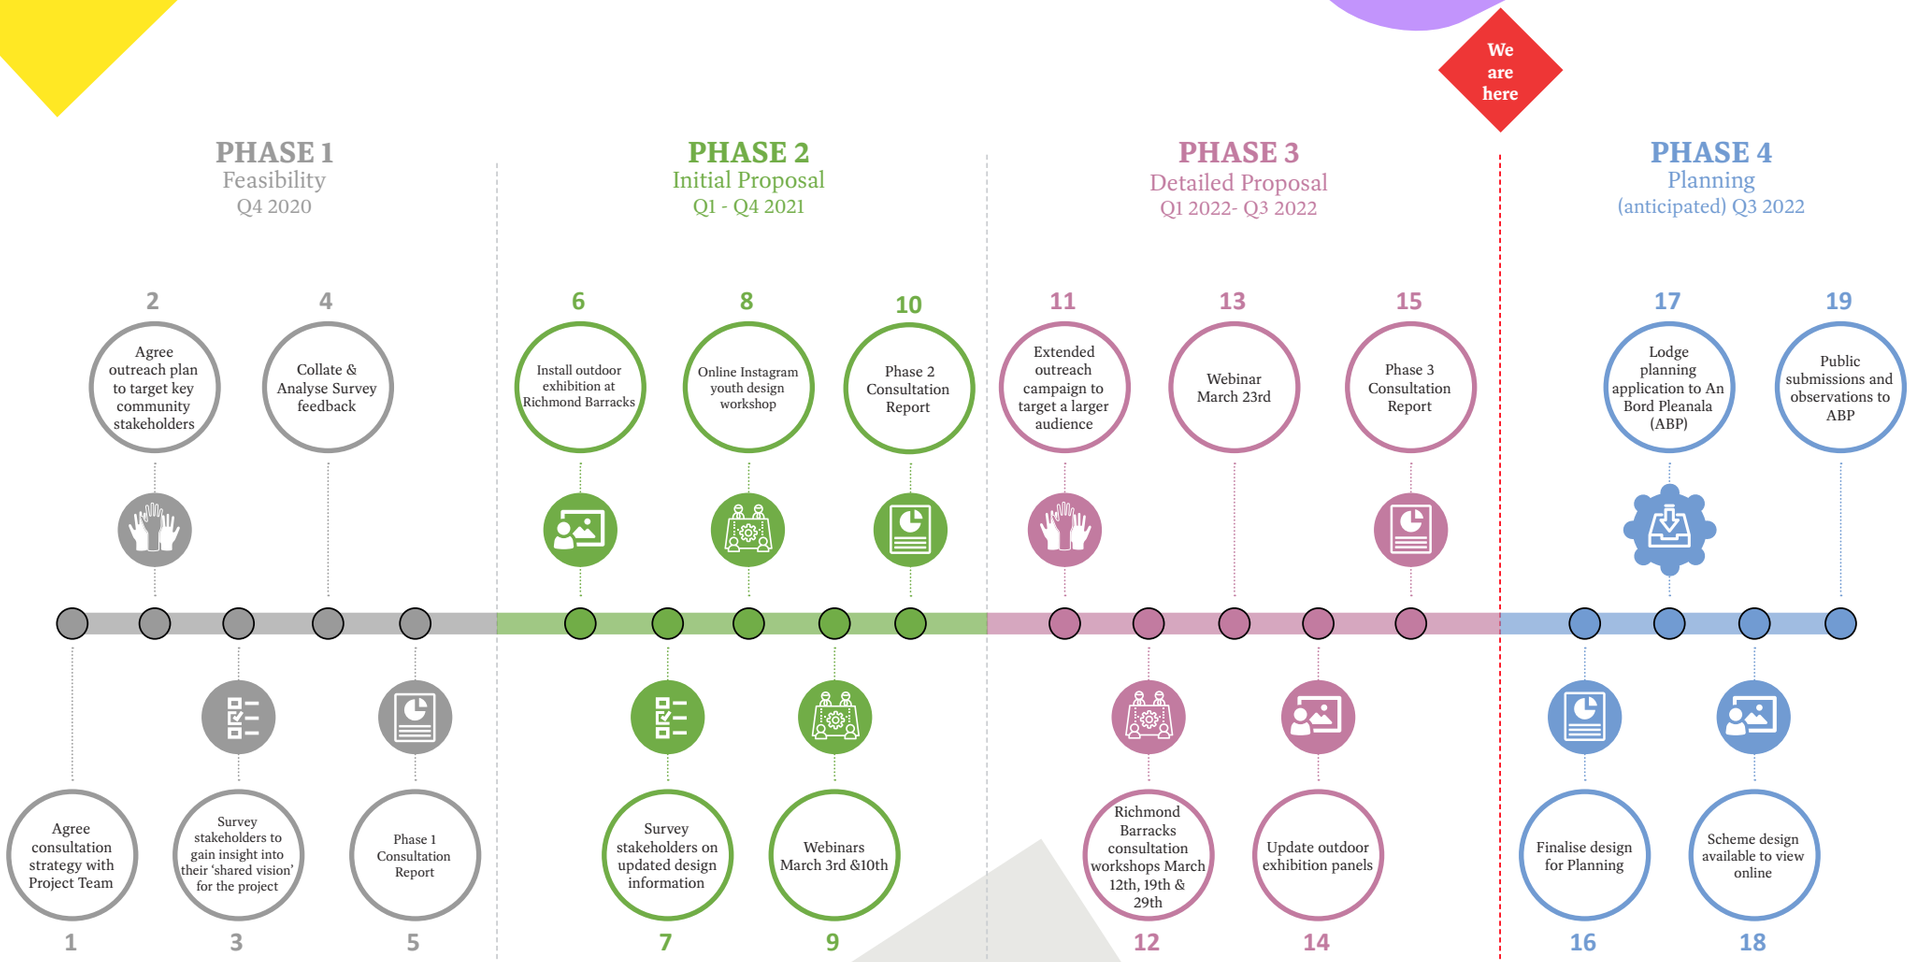
This, along with the information gathered during the consultation in Phase 1 and 2, also summarised in separate reports, both available online at the project website www.emmetroad.ie help to inform the design and creation of a quality new neighbourhood that aims to benefit both the new and existing community.

Photography from public consultation workshop held on Saturday March 12th

INTRODUCTION

Emmet Road, Inchicore, (formerly St. Michael's Estate), is a Dublin City Council owned site proposed to be developed as a mixed tenure development.

In 2020, Dublin City Council appointed Connect the Dots, a neutral third party with a demonstrated track record of facilitating successful community participation and engagement. Connect the Dots goal is to assist and guide stakeholder participation on the Emmet Road project.



The new development aims to deliver affordable, sustainable, and energy-efficient residential accommodation, with a tenure mix of 70% cost rental and 30% social housing units. The development will be supported by community facilities with appropriate retail including a supermarket, public green open spaces, play areas, a creche and community hub/library building.

The proposed public realm will be characterised by well landscaped tree lined streets and shared surfaces that prioritise pedestrian and cycle movements, with integrated cycle parking and discrete car parking. The design is driven by a place-making agenda including promoting shared spaces that enhance the lives of both the residents and the surrounding community, and encourage social activity.

Working closely with the key stakeholders, including the Inchicore Regeneration Consultative Forum (IRCF) and the local community, Dublin City Council aims to create a new neighbourhood of the highest quality, optimising the development potential of the site in a sustainable manner.

Community involvement has been integral to the design development from the very start of the Emmet Road project. The engagement with the local community has been critical, helping to ensure the design is driven by consideration for the building of a development that will enhance the lives of existing and future residents of Inchicore and the surrounding community.

CONSULTATION PROCESS & TIMELINE TO DATE

PUBLIC CONSULTATION OBJECTIVES AND METHODOLOGY

OBJECTIVES:

Transparency and Integrity

During the consultation process, we tried to ensure that the community were updated and informed on the project progress by providing information on key issues and activities taking place. This allowed us to evaluate the impact of different engagement activities (in-person workshops, webinar, youth workshop etc.) on the community, key stakeholders and other affected groups in order for the outcome to feel inclusive to all.

Accessibility and Visibility

Getting meaningful feedback means providing access to all the members of the community. Throughout the engagement process we have endeavoured to reach out to as many stakeholders as possible and use inclusive language and visual representation to facilitate comprehensive community consultation. All members of the public were invited to participate and share their feedback. The workshop space in Richmond Barracks was designed with the 3D model of the concept design situated at the centre of the room for ease of access for participants with mobility needs. Visualisations and information boards were strategically placed to ensure they were reader friendly.

PUBLIC CONSULTATION OBJECTIVES AND METHODOLOGY *(continued)*

METHODOLOGY

Outreach Strategy

The consultation process has aimed to involve as many people as possible through a variety of ways to engage with Dublin City Council on the Concept Design Proposals for the Emmet Road Development.

Please refer to ***Appendix A and Appendix B*** to view copies of the promotional information used during the outreach period.

The following are the various forms of promotion tools used for Phase 3:

Flyers

Flyers were distributed in the Inchicore area in the first week of March to introduce Phase Three, share updates on the project, and invite people to get involved in the consultation process.

Over 11,000 copies of the flyers were distributed to neighbouring residents, businesses and local organisations.

Poster Campaign

Prior to the open information sessions, workshops and webinar, posters were placed at bus shelters and on belly bins throughout Inchicore and Kilmainham, notifying residents of the upcoming consultation events.

Twitter

Dublin City Council's Twitter account was also updated with key information on the consultation.

Email Updates

The Elected Members of the South-Central Area along with previous consultation attendees were notified of the upcoming events in Phase Three.

Website - www.emmetroad.ie

The project website was regularly updated throughout March to keep people informed of the project and on ways to get involved. It continues to provide access to all presentation materials for this phase along with access to previous survey results and reports for the project.

Between the 8th and 31st March 2022, the website also incorporated an opportunity for the community to submit online feedback in response to the concept design proposals that were uploaded to review in advance of the events commencing.

The results of all the feedback received was collated, analysed and the findings outlined later in this report.

Written Feedback Submissions

Dublin City Council invited interested parties both online at the Emmet Road project website and in writing to make submissions during the Phase 3 period to outline any concerns, queries and ideas they wished to share with the project team.

Online Survey

Our online survey running for the period of Phase 3 invited stakeholders to respond to a set of questions to get an indication of the demographics of the interested parties and how they felt about the project.

The three questions asked were:

How do you feel about the project design?

What is your relationship to the area?

What is your main concern about the project?

Additional Communications

Along with the flyers there were other promotional forums utilised to include social media posts, website updates and the use of LED screens at project office at 6 Tyrconnell Road, Inchicore. Emails were also used to contact key stakeholders in local businesses, organisations & community groups.

We are also very grateful to the IRCF (Inchicore Regeneration Consultative Forum) and Kilmainham Inchicore Network (KIN) for utilising their various platforms to support and assist the engagement not only during this phase but during the previous two.

Post Event Feedback Survey

Following the conclusion of the Phase 3 event attendees were invited to provide feedback on their experience of the process and rate their satisfaction.

The respondents were asked to complete two questions:

How satisfied were you with the information presented at today's in-person event?

How do you feel about the project?

To find out the results of this survey along with all the other feedback received during Phase 3 please refer to the section on ***Feedback Analysis & Reporting***.

Photography from public consultation workshop held on Saturday March 12th

PHASE 3 SCHEDULE OF EVENTS

PUBLIC INFORMATION SESSION 1:
- Saturday, 12th March 2022 @ (12pm - 2pm)

PUBLIC INFORMATION SESSION 2:
- Tuesday, 15th March 2022 @ (11am - 1pm)

PUBLIC INFORMATION SESSION 3:
- Tuesday, 29th March 2022 @ (7pm - 9pm)

WEBINAR:
- Tuesday, 23rd March 2022 @ (7pm - 8.15pm)

SECONDARY SCHOOL WORKSHOP:
- Wednesday, 30th March 2022 @ (1pm - 2pm)

PRIMARY SCHOOL WORKSHOP:
- Wednesday, 30th March 2022 @ (2.30pm - 3.30pm)

LOCATION :
RICHMOND BARRACKS,
ST. MICHAEL'S ESTATE,
INCHICORE,
D08 YY05

Photography from public consultation workshop held on Saturday March 12th

EVENT DETAILS

PUBLIC INFORMATION SESSIONS AT RICHMOND BARRACKS

Three of these events were held on :

Date: *March 12th @ 12pm - 2pm*
March 15th @ 11am - 1pm
March 29th @ 7pm - 9pm

Purpose: To present the concept design proposals to the general public and key stakeholders. It offered the opportunity for those in attendance to speak one on one with some of the design team members which included the Design Architects (Bucholz McEvoy), Engineers (O'Connor Sutton Cronin Consultant Engineers), Landscape Architects (Bernard Seymour Landscape Architects) and Planners (John Spain & Associates) along with representatives of Dublin City Council.

The project team recorded the feedback received during discussions with the attendees and this was collated with the written submissions received at the events. The information sessions provided an opportunity to explore key areas where feedback could influence the design evolution in order to arrive at a design that would contribute the most to the community.

The information gathered is provided to the design team to consider as they progress to the next stage of the design development.

3D Model and Visualisations: A 3D timber model of the scheme was on display giving the community an opportunity to better visualise the concept design of Emmet Road rather than relying on design drawings which can be difficult to interpret. A selection of A1 size boards with renders of the proposed scheme were positioned throughout the room. The displayed designs included examples of public open space, residential accommodation, community facilities and local amenities. The images provided information to prompt questions, provide answers, encourage participation and knowledge sharing with the design team.

The information displayed on the boards was also available in a handout format distributed to the attendees as they arrived. In addition, a presentation of the scheme was projected onto a wall and running on a continuous loop.

There were a mix of stakeholders who attended the events; those living adjacent to or near the site, those living and working in the wider Inchicore area and also those with an interest in the project or cost-rental housing in general. The age profile varied with young children attending on the Saturday with their parents and participating in the event through artwork. Blank sheets and colours were provided on tables along with bowls of sweets being handed out. Tea/ coffee and biscuits were also provided and welcomed by many attendees.

Members of the IRCF (Inchicore Regeneration Consultative Forum) were also in attendance at all of the events, representing the hopes and concerns of the community while giving a view of the project in the broader context of the regeneration of Inchicore.

A professional photographer was present on Saturday 12th March to record the event. Samples of some photos are provided in this report.

WEBINAR AND QUESTION & ANSWER SESSION

Date: March 23rd 2022 @ 7pm

Purpose: To present the concept design proposals to the general public and key stakeholders. It offered the opportunity for those in attendance to take part in a Questions and Answers (Q&A) session with the design team Architect, Engineers, Landscape Architects, Planners and members of Dublin City Council project team.

The webinar was held on 23rd March at 7pm. When registering for the event people were given the opportunity to provide feedback or ask questions in advance of the event.

The webinar was attended by 38 members of the public. Design Team Architect Merritt Bucholz gave a 30-minute presentation on the concept design which was followed by a Q&A session chaired by Connect The Dots. The questions were a combination of those received in advance of the event along with any posted in the live chat during the presentation.

The full webinar and Q+A session was made available on the project website on March 24th and has received 89 views to date.

The questions raised during the webinar related to:

- *Anti-social behaviour*
- *Facilities & Amenities currently in the area*
- *Rationale for Parking & Potential increase in the demand for Public Transport*
- *The removal of the existing football pitches at the rear of St Michael's Community Sports Centre*
- *Rationale for unit mix and housing type*
- *Tenure Mix*
- *The potential use for roof space in the development*

The relevant experts gave detailed answers to each question. For the full text of the Q &A, please refer to ***Appendix C: Webinar Q&A*** of this report.

YOUTH WORKSHOPS

Date: March 30th 2022 held in Richmond Barracks:

- *Secondary School @ 1pm - 2pm*
- *Primary School @ 2:30pm - 3:30pm*

Purpose: To engage with Core Youth services, who represent younger people in the area in order to get feedback from the younger members of the community in a series of workshops. 20 primary school age children and 10 secondary school aged teenagers were invited to attend two targeted workshops.

The workshops offered the participants the opportunity to contribute to the design of the project's green open space and play areas. Through the use of the 3D model of the development and engaging with the design team, the youth groups confidently identified the main concerns and hopes they had for the project.

The workshop was hosted by Connect the Dots and delivered by project Architect Merritt Bucholz (BMCEA) and Landscape Architect Derek Naughton, Bernard Seymour Landscape Architects (BSLA).

Secondary School Workshop

Secondary school aged members of Core Youth were invited to participate with activity sheets, describing or illustrating their ideal design of a public open space or recreational area. Using presentation boards with 3D visualisations of the potential amenity uses and stickers, they were then invited to vote on their preferred use for the spaces. They engaged with design team members who noted their designs and preferences.

Feedback and insights gathered from the teen workshop provided a wide range of ideas, with some also suggesting that the housing be bright in colour with balconies facing the green spaces.

Other suggestions included:

- *Open glazed windows facing the green spaces.*
- *Hangout spaces with covered benches and free Wi-Fi.*
- *Scrambler Track.*
- *Supermarket.*
- *Green Space for Bikes.*
- *An Astro Park.*

Primary School Workshop

"We don't like places that are full of railings and security – makes it feel like a prison"

Children were invited to imagine their ideal play space and to help visualise that space through drawing and model-building using Lego or spaghetti and marshmallows, while engaging with members of the design team.

Using picture boards with various amenities and play equipment, children were invited to choose their favourite and vote in order of preference. A Basketball court was the most popular suggestion with 'Hangout Spaces' noted as the second most popular preference. Parkour/active/balance play was also voted for within the group.

YOUTH WORKSHOPS *(continued)*

Other suggestions related to the preferred location and measures that would make the play area feel safer:

- *Play zone near Our Lady of Lourdes Primary School (on the space shown as Goldenbridge Place on the design proposals) as the preferred location for the most active place.*

- *Welcoming parents to a safe space as they watch the kids.*

Photography from YouthCore workshops

FEEDBACK FROM YOUTH LEADERS

The YouthCore leaders who accompanied the children also contributed to the workshop. They indicated that the most popular activities with young people in the area are:

- *Football*
- *Biking*
- *Hanging Out*

They commented that the provision of local amenities can help support the children's interests in the area. The youth leaders also suggested providing an activity space near Core Youth, which the children could easily access and use. They also referred to some existing facilities in the area, such as the football pitches behind the Community Sports Centre that are in poor condition and in need of repair.

They also highlighted that the Astro surface area currently situated beside the crèche in Goldenbridge is a popular play space for children. The development of further Astro play areas would be welcomed.

Further suggestions from the youth leaders included:

- *Table Volley-Football.*
- *Bike repair stations.*
- *Hangout spaces with shelter from the Rain and free Wi-Fi*

Photography from public consultation workshop with Youth

FEEDBACK ANALYSIS & REPORTING

The purpose of the events held during the Phase 3 consultation was to share the concept design information with the key stakeholders and to facilitate discussion and ideas-sharing. The schedule of events aimed to involve as many people as possible through a variety of ways that are accessible and inclusive. The information sessions provided an opportunity to explore focus areas where feedback could assist the project team as the design evolves going forward to the planning stage and beyond.

This section of the report presents in graphical format the data analysed from the feedback gathered from the various events and surveys undertaken in Phase 3: Public open sessions, online survey, youth workshops and the post event survey completed by the attendees.

Community Key Issues
As mentioned previously in this report, the feedback gained throughout all three consultation phases has been consistent in terms of key issues identified by the community.

The following list identifies the issues in order of priority most relevant to the stakeholders who participated in Phase 3:

KEY ISSUES	PERCENTAGE OF COMMUNITY INTEREST
Height, Density & Tenure Mix	22.7%
Request for Additional Information & Updates	18.7%
Safety & Security	16%
Impact on Traffic, Transport & Parking	14.7%
Project Timeline	12%
Management & Maintenance	9.3%
* Other	6.7%

* *Other relates to a mixture of issues on: Community Facilities, Biodiversity, Sustainability, Quality of Construction & Materials*

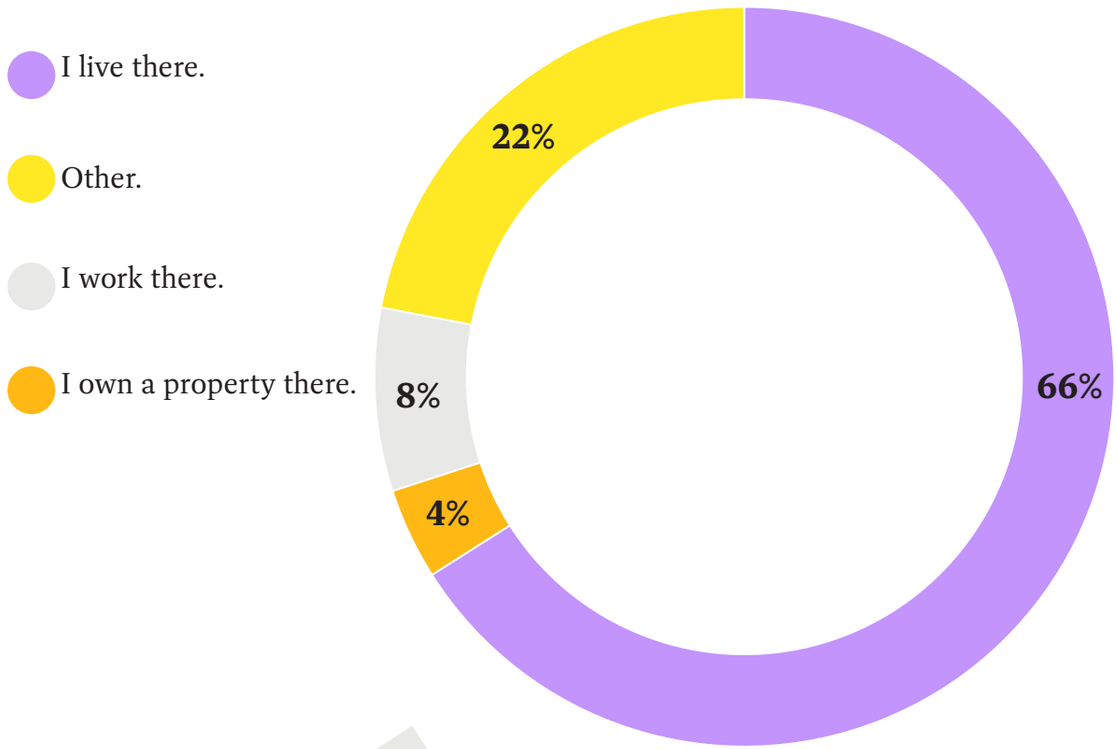
The remainder of this section of the report provides the statistics from the findings of the online surveys and youth workshops. This information is presented in graphical format for ease of reading.

FINDINGS AND KEY THEMES

ONLINE SURVEY

Our online survey asked a mix of questions to find out some details on the demographics of the respondents and how they felt about the project.

The three questions asked were:

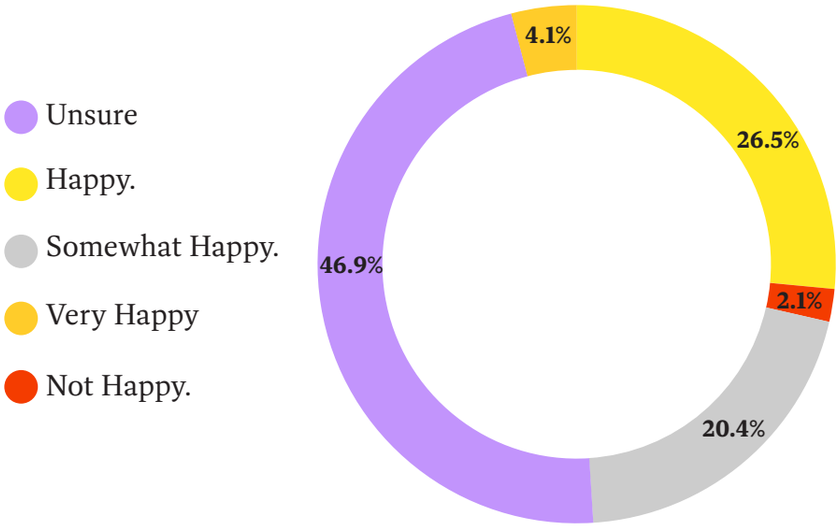


1. What is your relationship to the area?

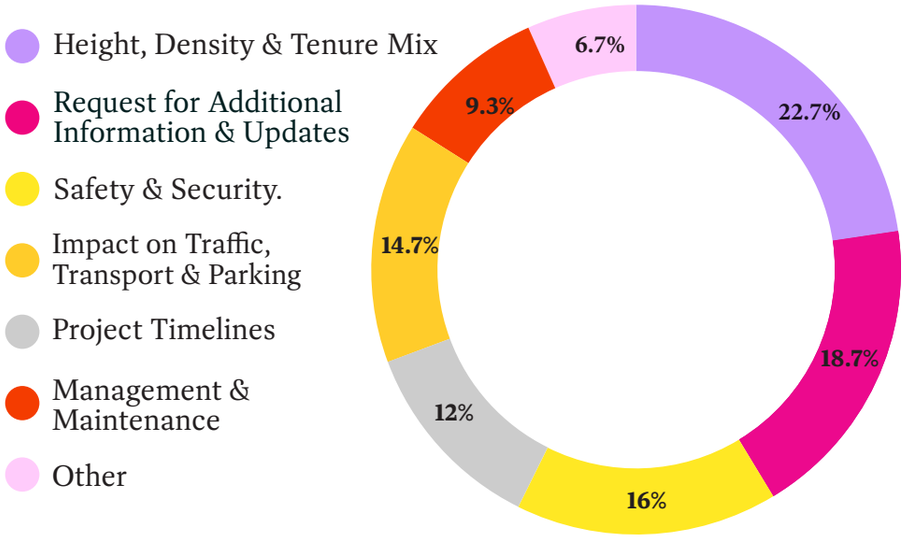
2. How do you feel about the project design?

3. What is your main concern about the project?

The results of the survey are provided in chart format over the next few pages.



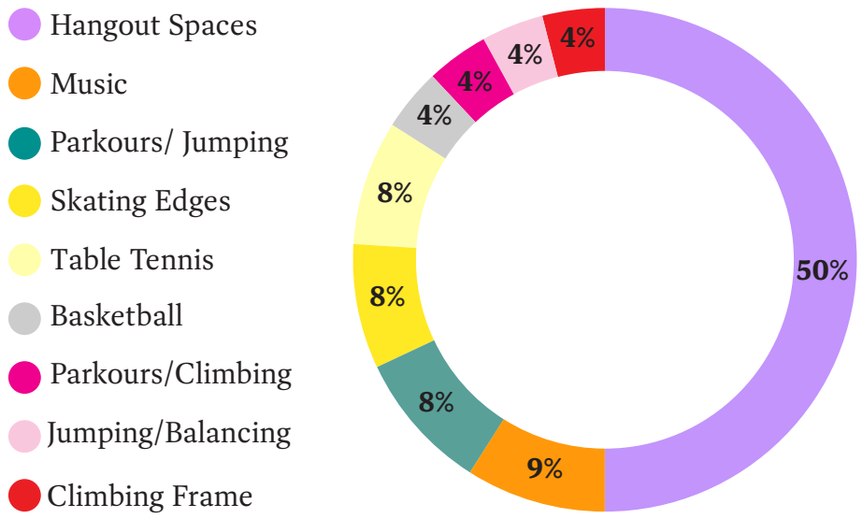
What is your relationship to the area?



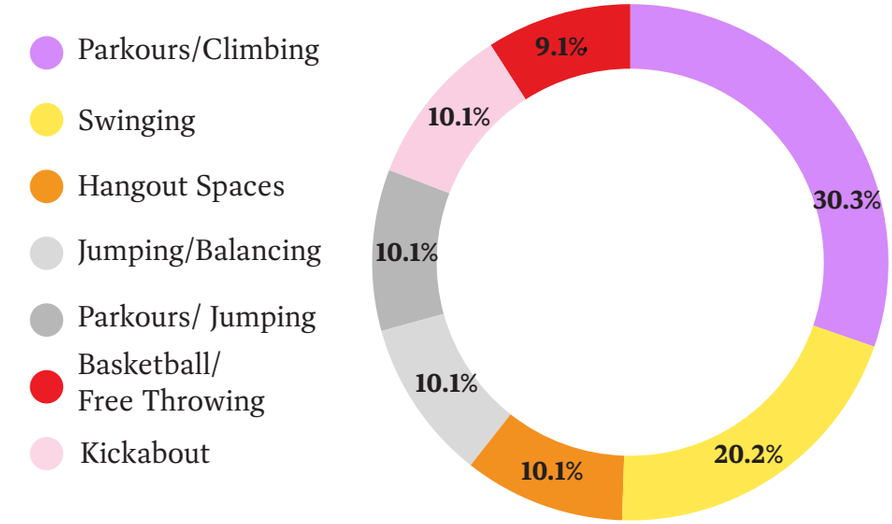
FINDINGS AND KEY THEMES

ONLINE SURVEY

How do you feel about the project?



What is your main concern about the project?

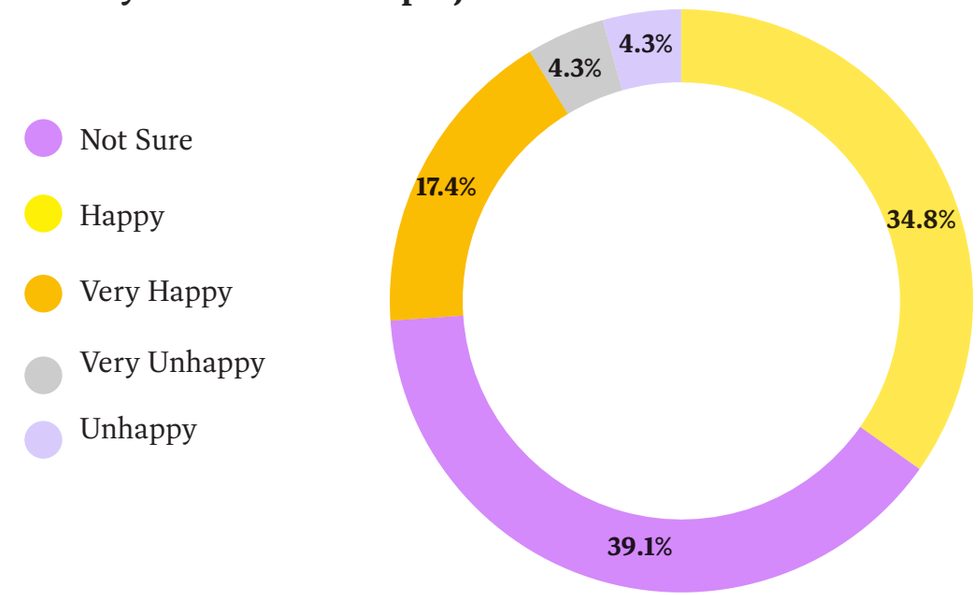


FINDINGS AND KEY THEMES

YOUTH WORKSHOP RESPONSES

Results from Secondary School Voting: Preferred use of space.

Results from Primary School Voting: Preferred use of space.



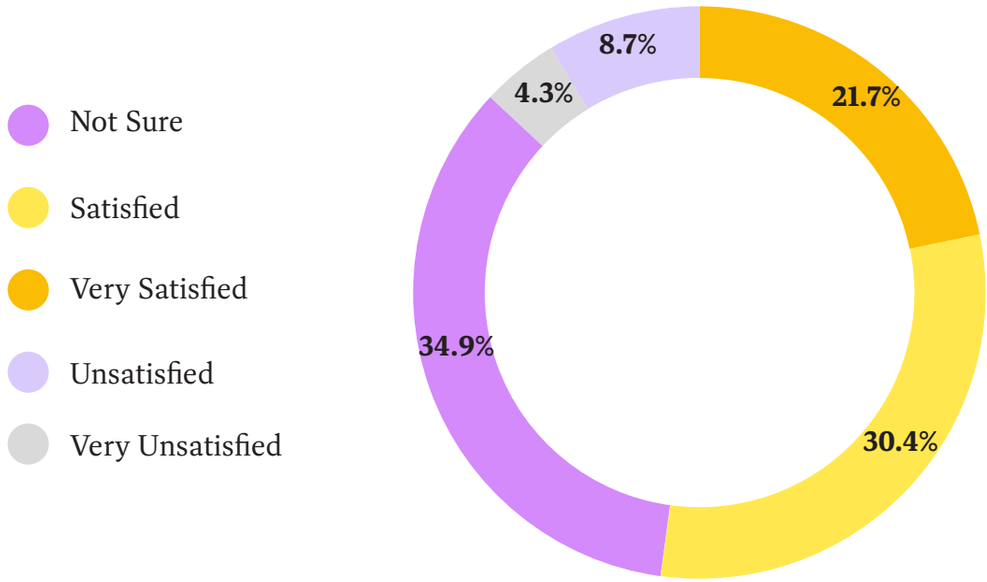
FINDINGS AND KEY THEMES

POST EVENT FEEDBACK SURVEY FOLLOWING THE EVENTS

Response to Updated Proposals.

52.2% of respondents indicated a positive response to the designs presented at the events. The breakdown of responses are available on the graph to the right.

How do you feel about the project?



FINDINGS AND KEY THEMES

POST EVENT FEEDBACK SURVEY FOLLOWING THE EVENTS

Response to Information Presented at In-person Events.

52.1% of respondents gave a positive response to this question. Over half the respondents indicated that they were either "Satisfied" or "Very Satisfied" to the information presented at the events. The breakdown of responses are available on the graph to the right.

How satisfied were you with the information presented at today's in-person event?

CONCLUSION

Phase 3 Public Consultation provided the project team with the opportunity to engage with the key community stakeholders and gather the different viewpoints, thoughts and ideas in relation to the concept design proposals presented for the Emmet Road development.

While the majority of participants felt positive about the scheme, the feedback gathered highlighted a number of concerns and areas of priority for the community. These issues were consistent with what the stakeholders had voiced throughout the three phases of public consultation. The project team welcome the feedback and ideas from the stakeholders although in some cases there were opposing viewpoints on many subjects like parking, density, height, tenure and unit mix

While the community engagement allowed the participants to comment on the concept design proposals it also raised issues somewhat outside the scope of the design of Emmet Road.

Stakeholders discussed the current lack of sufficient community facilities and infrastructure in the area and the demand for more quality green space. In relation to the concerns on traffic and transportation stakeholders highlighted the need to campaign for increased capacity and frequency on public transport both bus and LUAS.

In terms of the future operation of the development the provision of high-quality retail units and services and a guarantee of long-term residential tenancies is desired.

However, the main priorities identified were safety and security and the management of the scheme.

Many of the safety concerns stem from the community's previous experiences with anti-social behaviour and ongoing crime within the area. Regarding the safety and security and in particular what is happening in close proximity to the site, there is a desire for increased police presence and the introduction of deterrent measures in the area.

The relocation of the Kilmainham Garda Station closer to the village centre was suggested along with improved public lighting and CCTV along pedestrian routes to and from the canal. Some people were of the opinion that the current lack of quality amenities and community facilities contributes somewhat to the anti-social behaviour in the area. Many community members were concerned that the new development may add to the existing social problems while others were hopeful the scheme would be a positive contribution to the neighbourhood and resolve many issues .

The future management of the development was a key issue for many members of the community. Mistakes of the past associated with the former St. Michaels' Estate and other similar Dublin City Council residential developments were highlighted. Maintaining high-quality management standards is crucial in order to create a sustainable and desirable place to live, work and

use. The stakeholders emphasised the need to research examples of successful management models and to consider these when deciding the future management strategy for Emmet Road.

General comments with regard to the project's timeline and whether the risks of costs and delays would jeopardise the delivery of the development were also made. Similar to the previous concerns on future management, stakeholders questioned whether or not the development would live up to its ambitions to deliver and maintain a quality neighbourhood.

The combination of one-to-one discussions, online and written submissions along with the questions from the webinar highlighted the valuable local knowledge and experience that exists among the community. This alone greatly assists the design team going forward in the design development.

The feedback from the Youth Workshops highlighted the demand for sports facilities, a bicycle workshop and hang-out spaces with shelter and free Wi-Fi along with the provision of appropriate new community facilities and amenities suitable for all age groups. The creation of new public realm and green open spaces that facilitates permeability through the site for all users and integration with the wider community is also key.

Overall, the stakeholders emphasised the importance of designing an exemplar development that will deliver a high-quality sustainable neighbourhood for both the existing and new community and long term this will act as a catalyst for the regeneration of Inchicore and the wider area.

The consultation provided an opportunity for the public to voice their opinion and have their say. The project team wishes to acknowledge the support and engagement of the hundreds of individuals who constructively engaged and contributed to this process.

NEXT STEPS

This has been the third in a four-stage consultation process for the Emmet Road Development. The findings from the consultation process will be considered by the design team and will inform the next stage of design development.

Phase 4 will commence when Dublin City Council lodge the planning application to An Bord Pleanála. During this phase the stakeholders will be updated on the progress with the planning application submission and any post-planning decision project milestones.

Following lodgement of a planning application, submissions or observations can be made by interested parties to the decision-making authority directly. Application details will be publicly notified, available online for viewing and at specified locations to support accessibility for all.

Thank you from Dublin City Council and all the Emmet Road Project Team.
We appreciate all the community support to date, and we look forward to engaging with you again in the future.

Phase Three Consultation Appendix

Appendix C: Webinar Q&A

QUESTION ONE:

I will start with some questions on the issue of anti-social behaviour, how does this address the issue, and how does it differ from other high density schemes in Ireland?

Answer from Bucholz McEvoy Architects:

I think what's really important about the project is that it's a mixed tenure development. So that means that it will be really different from mono tenure developments, and I mean mono tenure in any sense. I think that's really, really positive. I think the mixed tenure will also support the wrap around facilities, the grocery store, the retail, but also the library, the community hub, the existing sports community building, the cafés, the outdoor spaces. Mixed tenure means you've people of all ages, people of all abilities, people coming from all over the place. I think it's really exciting, it's hard to think in places that embrace that as -- in the same way that this is and at the same time to try to use that as a springboard to develop new public spaces with really useful activities, new public buildings with really useful activities. I think it's going to be -- I think that when it comes to anti-social behaviour, I think this question of diversity and of use is really, really important. I talked a little bit about how the buildings are addressing the streets and building these new streets. This is really important. High-quality public lighting, all of the things that people in a way know or feel like they need to be there, but how do we actually make that work so that when you are walking down the street, you recognise your neighbours? You can -- you don't feel like you are going to be chased off the street by a car or a bus, or that you as a pedestrian are in command of the street. And you can use the spaces that the streets create, the street creates for you, to sit, to rest, to meet people.

I think these things also make anti-social behaviour really difficult. I think the permeability of the site, I just want to say that the streets also will attract people, it's not just about the people who are going to be living here, it's mostly actually about the people who already live in Inchicore and around the site and making it welcoming for everyone. The way that the scheme is designed with these three courtyards that have East, West, new east/west streets connecting, Vincent street West and Patriot's Path I think is really important. I think supporting this kind of connectivity and permeabilities through the site is crucial to making anti-social behaviour really difficult. The clear and -- connected to that is the clear delineation of public and

Appendix C: Webinar Q&A

private spaces. So public spaces are public spaces. And they're generous, they're welcoming, but they're also clearly public, private spaces are not accessible to the public unless you live there and you have a key or a fob and you can go in or you are let in by a resident. So people know who is living there, people recognise each other, and the community supports itself. So I think this kind of clarity about public spaces and private spaces, which the scheme really addresses is quite strong. So I hope I have kind of touched on the main points there.

QUESTION TWO :

The second question then is around the facilities and the amenities in the area and the concern I suppose of the influx of people will affect this in some way. What do you think the scheme is doing to address those things?

Answer from Bucholz McEvoy Architects:

I think it's pretty amazing that there is a supermarket going into the scheme. It's not -- it's just not every scheme that is this size that also has a supermarket. Inchicore needs a supermarket, everybody knows that. I think this is going to provide a place where people can buy their healthy food at a price that they can afford, a proper supermarket like Aldi, Lidl, Tesco, Dunnes Stores, something like that. So I think that's really important. I think that the smaller retail units that will be underneath that on the ground floor will allow different kinds of tenants to come in and really provide a diverse offering to people. It's geared towards pedestrians. You can see that in how the scheme is designed and laid out.

It's geared towards pedestrians, it means people who live in Inchicore, who maybe came to Inchicore by bus or Luas. But creating a life of the street that's really active is really important. Creche, library, the community hub, yeah, these are all I think -- they're like toolkits that are given to the community. They're things that you can use to build all sorts of new things. I don't mean new things in terms of buildings, I mean new things in terms of projects that the community already wants to achieve and do. I believe that the diverse offering that the project is bringing is going to be fabulous.

Appendix C: Webinar Q&A

QUESTION THREE :

Our next set of questions are around the rationale for the parking provided within the scheme currently, and I will ask I will attach to that as well was a question around the potential increase in traffic or demand for public transport.

Answer from O'Connor Sutton Cronin Consultant Engineers:
Indeed, thank you very much. Thanks to all those listening. To set out from the start, the rationale behind the mobility management aspects of the project, you seek to find a right balance between the car parking provision, and the encouraging other uses of other modes of transport. So government policy is to move towards more sustainable modes of transport, and within that, we see the site being a very good candidate for that in terms of proximity to existing public transport, and also proximity to the -- both the Luas, to local buses, the proximity to the city that can give you the wider transport options in terms of Heuston Station or Connolly station.

Also the future planned increase -- or improvements to cycle routes within the area. So we tried to encourage -- actively encourage the moving away from the cars as the primary source of transport, and that's what we have done within this scheme. We don't want to encourage the use of cars so, we don't want to provide too much car parking, and that's why we have struck the balance with the numbers we have.

We will demonstrate that within -- at planning stage, we will be preparing mobility management plans for the site and undertaking traffic impact assessments, so both those documents will be prepared for the planning application and will accompany it.

QUESTION FOUR:

The next question that came in was about a pitch. Sandra, would you might answer the question about the five aside pitch and if it will be included as part of this scheme.

Answer from Dublin City Council:
Thanks Naomi. As DCC, this has been risen a number of times and I know it's come through the Councillors questions. There is an existing pitch behind the existing sports centre. We looked at it previously in 2019, it was considered that it could be a possibility included in the design. However, since the design team came on board and we began the design of the scheme, we have given consideration to including a pitch on the site. However, we deemed it not feasible due to a number of design constraints. Trying to achieve a balance there between the

Appendix C: Webinar Q&A

residential on the site, you have got a library community centre, you have got a supermarket, a quantity of public open space to provide. Having a five aside pitch in the middle of this development, there is so many other things to consider in terms of the likes of acoustics, and lighting and security.

So however, DCC are fully committed to providing a pitch, providing a pitch in as close proximity to the site as we can. We have been working with the area office of the DCC and some members of the IRCF to find a location that would be suitable. We have been working with Mercy Secondary, they're off Thomas Davis Street, and a potential site we thought we could use, however at the end of last year, it was decided that it was not suitable. So we are pursuing other locations, we are looking at Turvey Park, where there is a facility there. We are working with our Parks Department to try and come up with a solution and it is our -- we endeavour to provide a pitch and hopefully deliver that in advance of the main development.

QUESTION FIVE :

Our next question is around the rationale behind the unit or the type of housing mix for the scheme. I will ask Rory Kunz to jump in here and respond to that if that's okay.

Answer from John Spain Planning Consultants:

Okay, thanks. The overall mix is among the aspirations of the development plan and it's also very much fixed in the wider -- the National Planning Framework and encouraging apartments in suitable locations such as the site at Emmet Road in terms of the question referenced. In terms of the mix of the development, DCC has done their analysis; one and two bedroom units will account for most of the housing provision with approximately 8 per cent of the total provision being three bedroom units. This mix is in line with DCC's preferred demand in the area. So it's very much catering for what DCC see as the demand.

And in terms of the families, I suppose the make up of families has changed over time and are not restricted to the traditional nuclear families. Society has changed and the mix reflects this via the department guidelines; they say that two bedroom units are to be encouraged, with two-thirds of households in Ireland, since 1996, being two bedrooms allowing for one or two person occupancy. In relation to the cost rental model and putting down roots, I suppose the objective, or the rationale, is to encourage people to put down roots on a long-term basis compared to apartment schemes which are seen as transient in nature. This is a new model which will encourage people to put down roots in the area.

Appendix C: Webinar Q&A

QUESTION SIX :

The next question then while we have a few more minutes left is in relation to the mix of social housing and cost rental. Sandra, would you mind coming back up and maybe just elaborating on the affordability on the cost rental model.

Answer from Dublin City Council:

The tenure mix on the site is 30% social and 7% cost rental. People who may not know the background, where it originated from, this was one of the three sites under the housing land initiative. The three sites, O' Devaney gardens, Oscar Traynor Road and St Michael's was part of the three sites DCC were to develop under a development agreement. However back under Minister Eoghan Murphy, it was decided and he identified this site as a pilot cost rental scheme that it would be a good location. So under the HLI, it was 30% social, 20% affordable purchase and 50% private. We retained a 30% social and the remainder was to become the 70% cost rental. That was the agreement between DCC and the department. Then the social as Rory said is based on our housing -- a housing needs assessment and it's based on our housing waiting lists that we will look at in the area and looking in terms of the numbers and the type of units, and as Rory said there is more demand for actually one and two beds, would you believe. And less so on the three beds.

But we are constantly assessing looking at the statistics we have in front of us and looking at the what we receive from our own internal departments. In terms of the cost rental, we will have mixed studios, one, two and three bed apartments, but there will be no studios in the social, only in the cost rental. So I suppose the idea of having the mixed tenure of the cost rental and the social is really about us optimising the site and it's a publicly owned site. So we are retaining our units and providing cost rental, so it's to cater for that other cohort that can't afford a mortgage, don't qualify for social, can't afford to pay private rents and have that difficulty. So we would be providing accommodation that has below market rents for those people to make it affordable. Also it's responding to the local need in the area, and giving that alternative form of accommodation in terms of stable rents and building a sustainable community and integrating with the wider community in the neighbourhood.

Appendix C: Webinar Q&A

QUESTION SEVEN :

I don't want to keep us on too much longer, we might just ask Merritt to address two final points about the use, potential usage of the roofs on the scheme and whether there would be any other single aspect dwellings?

Answer from Merritt Bucholz, Bucholz McEvoy Architects:
Yeah, so the roof, I think the roofs are a great opportunity. Perhaps everybody knows, but Dublin City Council has a policy of developing green and blue roofs and that's certainly going to be part of the plan. All of this is obviously cost dependent, but managing our environment is all about using our roof scapes better. I think in the comment that I was reading, there are other uses that could develop over time for those roofs because -- and I think that the massing, the stepping of the project allows access to the roofs which is important. That you can get to them. Because that -- there is all kinds of possibilities, so this will definitely be something that we examine as the design is detailed. The other question that arises which is touching on it which is around the aspect of the units and the density. I think the courtyard -- come and see the model. Because it's quite a generous scheme. These are units that will have really wonderful access to daylight. I think this is a simple fact of the design. I think it's something you really appreciate when you see it in three dimensions.

Half of the units will have dual aspect, which means that the other half will have single aspect. And I think, and in any case, not north facing. So you will either be facing East or West, predominantly. The dual aspect is south plus East, and there is some dual aspect which is north plus south. So it's -- I think this for a residential scheme in Dublin that this density, I think that's pretty fabulous and I think that's also important. It's a kind of a really important bar that the Development Plan sets that the design is taking advantage of.

Appendix D: Feedback Records

Emmet Road Inchicore

Phase Three Consultation Appendix

Appendix D: Feedback Records

Height, Density & Tenure Mix.

The following general comments related to Height, Density and Tenure Mix were recorded as feedback at the open information sessions:

- Do the cost rental units only comply with minimum standards ?
- I would like to see a floor plan of an individual residential block.
- I would like information on the cost rental scheme. How is the percentage of cost rental units determined?
- There should be more transparency on how the 548 unit figure was arrived at.
- The number of 3 bed units has halved since the first proposal, this is very disappointing, building a sustainable community is key for the success of the development.
- Number of dwellings is too high.
- Seven storeys may be too high for the area, in particular the area near the cemetery.
- This scheme has not been designed with families in mind. Low number of three bedroom units will encourage transient occupancy. This area needs to encourage residents who will put down roots, raise a family in the area and become part of the community through schools, supporting businesses in the area and making a contribution on a long-term basis.
- There should be a higher number of units put aside for social housing.
- I would like to see more apartments provided in the scheme as more housing is badly need in the area. Why not go higher in at least one block?
- It is crucial that the cost-rental element of the development is maintained at least at the current level of 70%. Cost rental offers many advantages over a private housing model

Appendix D: Feedback Records

Request for Additional Information & Updates

The following general comments related to Request for Additional Information & Updates were recorded as feedback at the open information sessions:

- It would be nice to see developed floor plans and circulation.
- There is not much information on how sustainable the project will be in terms of construction and life-cycle. Has to be presented in the context of sustainabilty.
- I would like to know more about the occupancy and demographics.
- I would like to see sections showing the scale of the scheme in relation to the surrounding context.
- Will we have Green roof, will the community have access to any roof garden or opportunities for roof top farming ?
- What spaces will be available in the community hub and library? How much space in sq metres will be allocated for the community.

Appendix D: Feedback Records

Safety & Security

The following general comments related to Safety and Security were recorded as feedback at the open information sessions:

- As the site it currently an open green site which is overlooked, the anti-social behaviour is curbed, however dense building on the site would introduce hidden “internal streets” where ant-social behaviour could thrive.
- Open drug use is taking place near the site, a Garda station should be re-opened in the area to help manage this in order to prevent the new scheme form becoming a “no-go” area?
- The lack of parking will encourage more people to use the LUAS, however there have been numerous incidents of anti-social behaviour along the nearby path. The scheme needs to include better lighting along the canal path.
- There is a safety issue with the public path at the back of the proposed blocks at Goldenbridge.
- Project will need full-time security on site during construction and full time management thereaftet to manage anti-social behaviour.
- The visitor bike-parking shown in the scheme is a security risk.
- Women have safety concerns with cycling along the canal path and will use Emmet Road instead, this should be considered when designing any cycling infrastructure.
- Design team should liaise with An Garda Siochana to plan the policing of the area.
- Scheme should avoid the inclusion of covered archways as they are a security concern, this element of the design feels unsafe to pass through. DCC should refer to other schemes and avoid these types of unsafe pinch points.

Appendix D: Feedback Records

Impact on Traffic, Transport & Parking

The following general comments related to Impact on Traffic,Transport and Parking were recorded as feedback at the open information sessions:

- There are very few parking spaces provided as part of the development. If there is a push towards public transport steps need to be taken to help existing and new residents feel safe in doing so.
- There is limited provision of car parking, this may not attract people to want to come to live and work here. St. Vincent Street will have to deal with the parking overflow.
- Existing public transport does not have the capacity to accommodate more users travelling into the city from this area.
- The public infrastructure does not have the capacity for another new development in this area. This development should be contingent on provision of more public transport services and increased frequency of the existing services.
- The construction will negatively impact traffic in the area, particularly near access points to the site. Will there be a plan to address this, and will residents be informed of this plan ahead of time?
- Increase in volume of traffic, LUAS and bus needs to be considered.
- Cycling on Emmet Road is currently very difficult, the scheme should include this consideration as part of the project, it should be well integrated and not an afterthought as it appears to be in other schemes.
- There are a lot of proposed residential developments along the red LUAS line, in the areas of Bluebell and O' Devaney Gardens, which will put a lot of pressure on the existing network.
- Charging for e-bikes and cargo bike storage will be key to enhance active travel provision.
- Consider car-parking for elderly, residents with disabilities and tradespeople. Development should not just be aimed at young professionals.

Appendix D: Feedback Records

Project Timeline & Delays

The following general comments related to Project Timeline & Delays were recorded as feedback at the open information sessions:

- How long will this project take? Where can we find updates on the project after this? Perhaps DCC could leave this model and exhibition in place as a drop in for the local residents to stay up to date with changes to plans and an updated timeline, planning status etc.
- When will this be finished. This area needs more high-quality housing near to the city centre.
- I'm concerned with getting it done right, and getting it done quickly.
- This project has taken a long time to get this far, I'm worried about the length of time it's taking.
- It's not clear when this project will be on-site and when it will be finished.
- I'm worried about the timeline of the retail units, if those are left until last, this will have a detrimental effect on the project. Facilities should be built first and then followed by the housing.

Appendix D: Feedback Records

Management & Maintenance

The following general comments related to Management and Maintenance were recorded as feedback at the open information sessions:

- My main concern is about the management of the complex after the construction is finished. How will that work? Will residents have easy access to the management body? How will the management body gain legitimacy within the community, users, residents and tenants?
- There needs to be sufficient funding for repairs to be done quickly to keep the building well-maintained. This has been an issue in similar schemes historically. How will you prevent this scheme from becoming shabby and falling into disrepair as time goes on?
- This scheme should look to Thornton Heights and learn from management issues which occur there.
- The project needs to be managed appropriately in order to prevent anti- social behaviour and criminal activity. DCC need to manage the intergenerational tenants. Ballymun did not fail because of architectural typology but because of a lack management and maintenance.
- Communal spaces need to be maintained.
- What are DCC's plans for the management of the scheme during the occupancy?
- The management of the development is of critical importance. We must learn from the past to ensure that this can be a flagship development and a model for urban regeneration.
- Who will provide overall management so we do not end up with a social ghetto in a few years?
- It is important to have a management office on-site
- I am impressed by the attractive green spaces; How are the spaces planted/ landscaped? Who is in charge of maintaining these? There is potential for these large spaces to become unused/ poorly looked after.

Appendix D: Feedback Records

*Other

Some of the feedback called for the provision of Community Services and Facilities, some mentioned are in the feedback were the following:

- Basketball Court
- Football Pitch
- Pharmacy
- Creche
- Doctor's Surgeries
- Boxing ring
- Facilities for Men's Shed
- More Public Spaces
- Skate Area
- Playground

Some comments related to the provision of facilities or community services were the following:

- Community facilities need to be defined at an early stage and integrated with existing facilities in the area.
- There will be a loss of community facilities.

Some of the feedback called for the project to add facilities or considerations related to Biodiversity and Sustainability, some of those suggestions were the following:

- Graveyard as space to encourage biodiversity. Possibility of wilding the area between cemetery wall and the parking spaces.
- Will it be sustainable both environmentally and socially?

Some of the feedback related to the quality of construction and materiality of the project.

- Materials should not be same as seen locally, different identity for the scheme.
- Don't want design build contract- concern with quality and life cycle.

1 INTRODUCTION

1.1 Appointment

O'Connor Sutton Cronin & Associates (OCSC) have been appointed by *DCC* as part of an integrated Design Team led by Bucholz McEvoy to undertake the Civil & Structural design for the proposed mixed-use development at Emmet Road, Inchicore, Dublin 8.

1.2 Administrative Jurisdiction

The proposed development is located in the jurisdiction of Dublin City Council.

1.3 Site Location

The site for the proposed development is located in the heart of Inchicore, as indicated in Figure 1.1 over.

Inchicore is a suburb of Dublin located approximately 4km to the west of Dublin city centre. Inchicore is primarily a residential area comprising predominantly of 2 storey early to mid 20th century housing stock with some medium rise apartments developments of both social and private built in more recent decades.

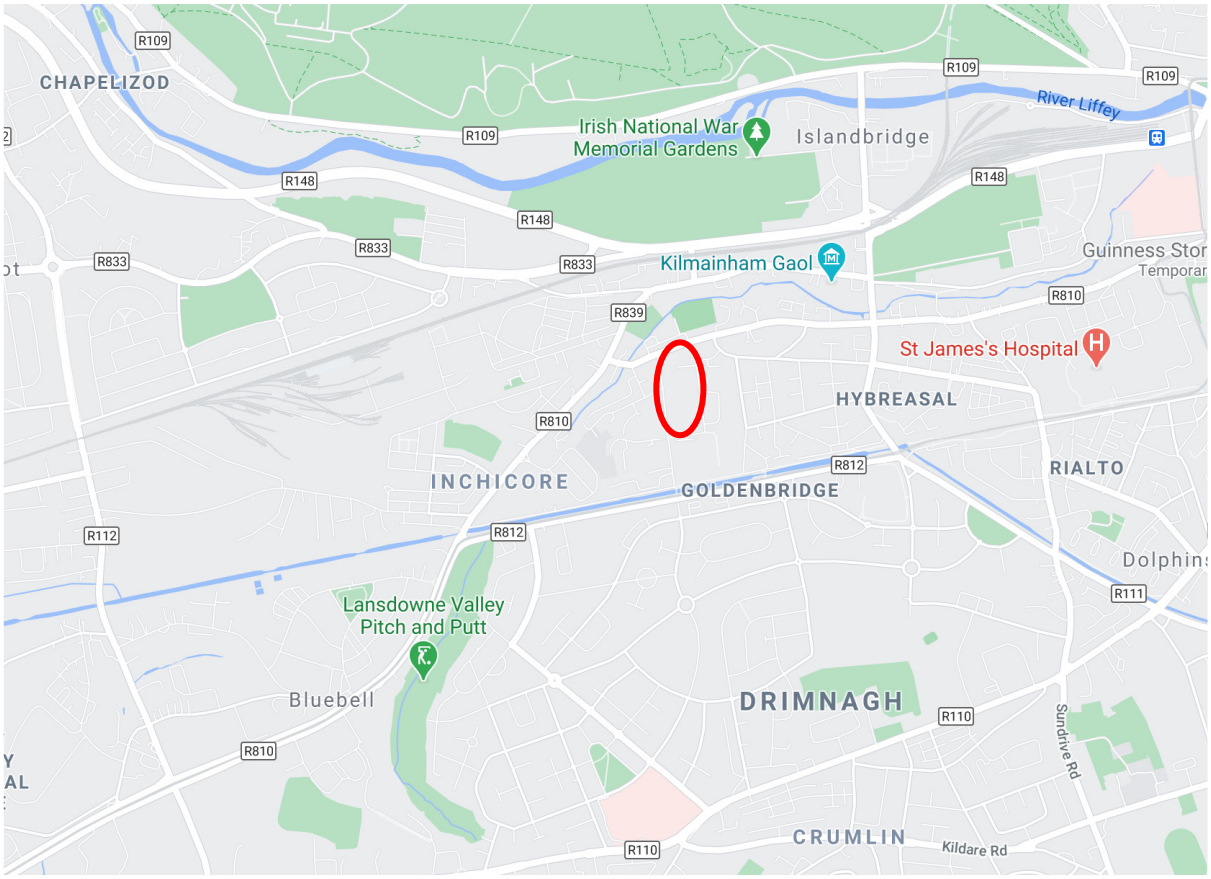

Figure 1.1 - Site Location (www.myplan.ie)

1.4 Existing Site Overview

The site covers an area of approximately 4.68 hectares (which includes water main upgrade works along emmet Road to the Junction with Tyrconnell Road/Grattan Crescent) and the main development site is c.3.8 hectares (9.4 acres) and is bounded by:

- Emmet Road to the north;
- St Vincent Street West to the western boundary;
- Goldenbridge Cemetery to the southern boundary;
- Patriots Path to the eastern boundary

The site currently comprises of a mixture of brownfield areas which previously housed the St Michaels Estate development together with the current existing buildings/structures:

- St Michael's Community Centre (to be demolished as part of permitted Part 8 Development 2221/21);
- Eve Tuiscint Health Centre (to be demolished as part of permitted Part 8 Development 2221/21);
- Inchicore Community Sports Centre (to be retained)
- Boundary wall to the north western corner of the site (some works to be undertaken but majority to be retained).

There are a number of existing structures outside of the site that are of importance. These include:

- Inchicore Primary Care Centre to the east of the site;
- Richmond Barracks to the east of the site.

The locations of the above buildings relative to the site are shown in Figure 1.2 over.

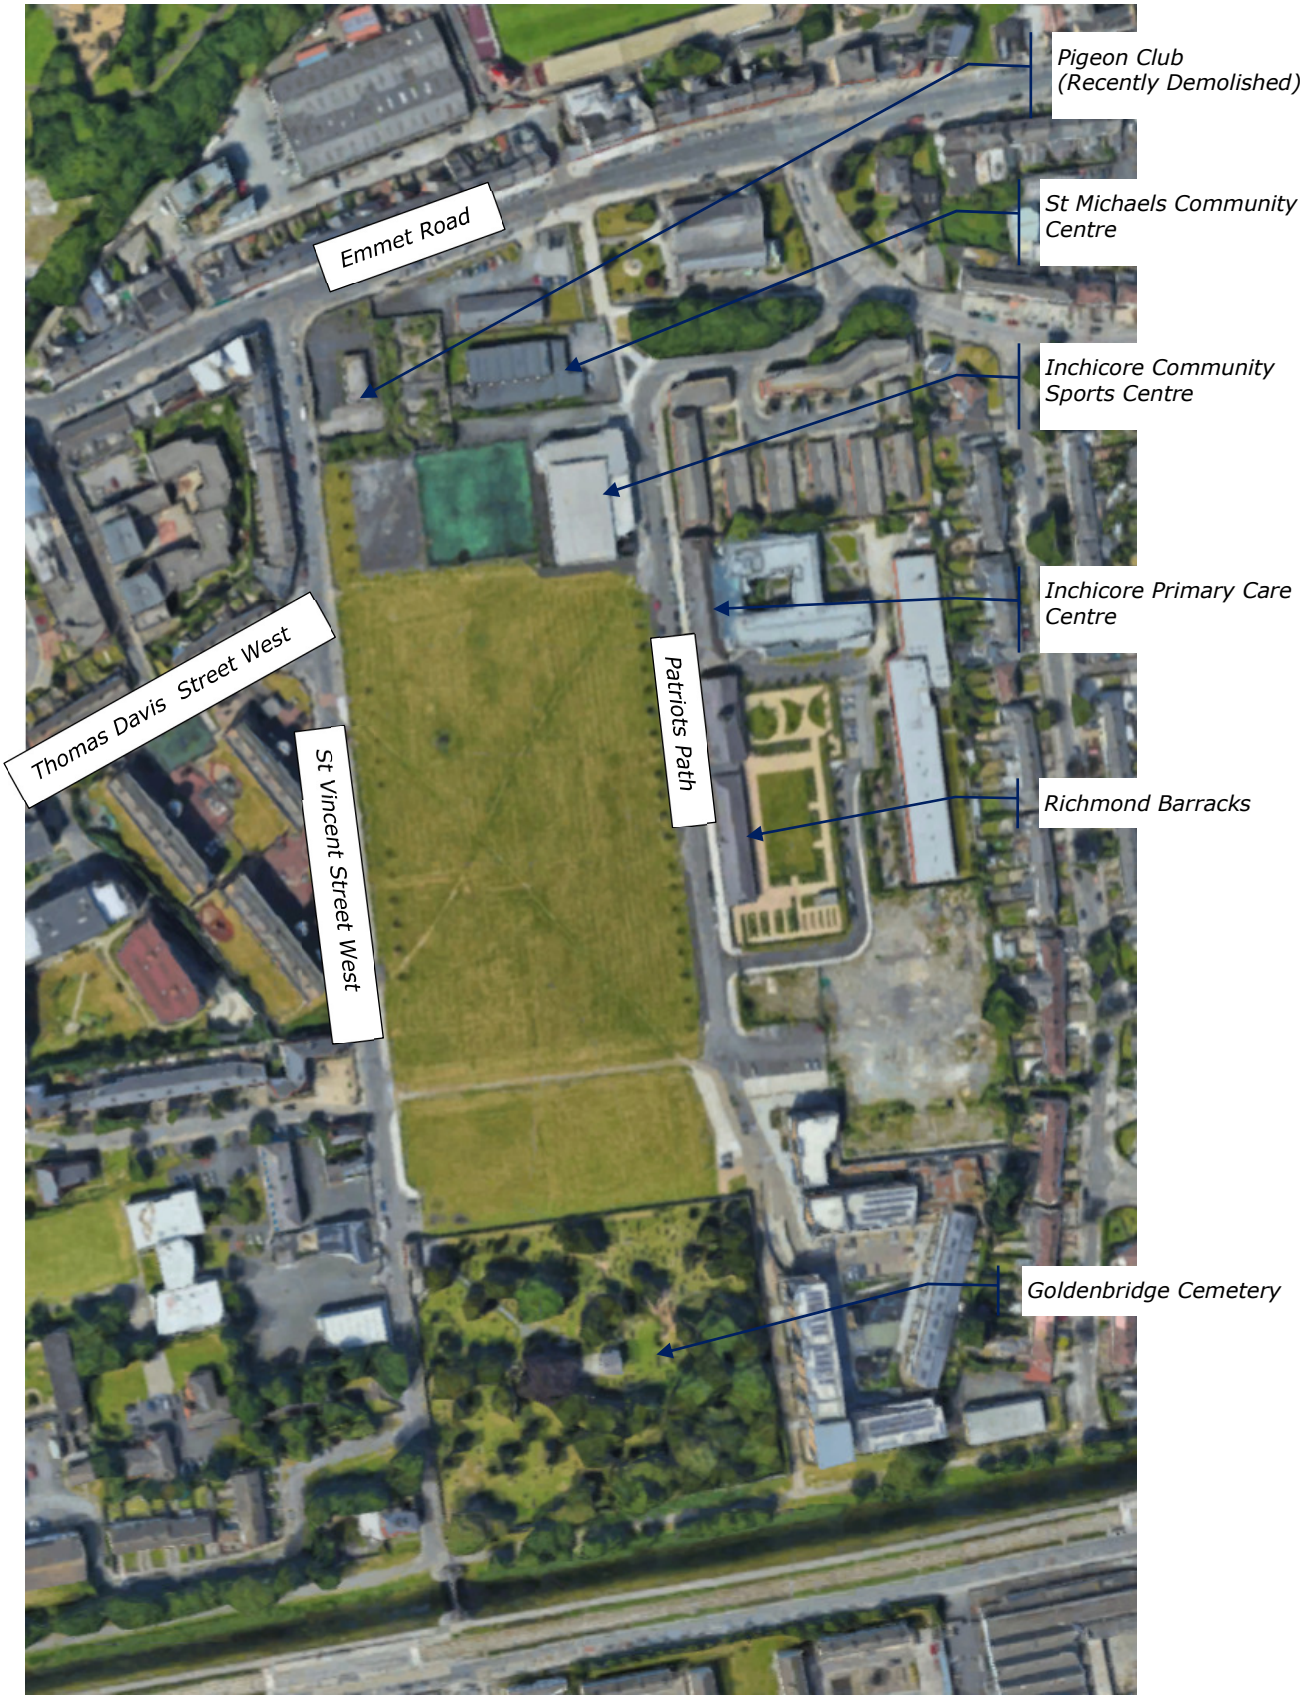

Figure 1.2 – Site Environs

1.5 Proposed Development Context

The proposed scheme consists of a mixed-use development with a strong emphasis on residential units in addition to commercial, retail and community facilities together with all associated infrastructure including roads, footpaths, services and landscaping.

Figure 1.3 – Proposed Site Layout-to be updated to final redline

The development will comprise 578 no. apartments, consisting of 110 no. studio apartments, 172 no. 1 bedroom apartments, 250 no. 2 bedroom apartments (including 10 no. duplex apartments) and 46 no. 3 bedroom apartments (all apartments to have balconies or terraces), community facilities Library/Community Hub, Creche, Supermarket, 5 no. units (retail/café/restaurant/class 2 financial services floorspace) & 2 no. Café units), a public plaza fronting onto Emmet Road and the installation of a new watermain c 200m in length along Emmet Road to the junction with Tyrconnell Road/Grattan Crescent. The proposal includes works to a protected structure (8705 - Richmond/Keogh Barracks, relating to works to rubble stone boundary walls).

2 SCOPE OF CONSTRUCTION AND ENVIRONMENTAL MANAGEMENT PLAN

This report has been prepared as an outline construction strategy setting out construction method and activities required for the construction of the proposed residential and commercial development. This outline plan seeks to demonstrate how works can be achieved in a logical, sensible and safe sequence with the incorporation of specific measures to mitigate the potential impact on people and the environment. This methodology will be required to be interrogated and developed by the Main Contractor prior to commencing works on site. It is noted that this document should be viewed as an outline plan with the fully detailed Construction and Environmental Management Plan to be developed by the appointed main Contractor in consultation with Dublin City Council the Planning Authority (as required) prior to works commencing on site. The mitigation measures contained in the EIAR will form part of the Contractor CEMP.

Discussed in the following sections are:

- Construction Management issues;
- Pre-Construction Activities;
- Foundations & Substructure;
- Services;
- Superstructure.

3 CONSTRUCTION MANAGEMENT

3.1 Overview

The works outlined in this methodology narrative outline the potential methods of construction available to the Main Contractor. The narrative indicates the prospective progress and gives an explanation of the associated activities and their interdependencies and how the project will be delivered. There are a number of constraints and requirements which have been clearly considered by the Project Team throughout the design process-these will need to be further developed upon by the appointed Main Contractor prior to works commencing on site.

In broad terms, the project will be sequenced as follows:

- Pre-construction activities;
- Site Clearance including demolition;
- Piling;
- Ground Beams;
- Site services (including watermain upgrade works);
- Construction of superstructure;
- Completion of façade;
- Mechanical & electrical works;
- Internal fit-out;
- Hard and soft landscaping;
- Completion

3.2 Project Delivery

The project is proposed to be constructed in two separate tranches with each tranche to be procured under separate contracts. The main portion of the development will be delivered by the Applicant and will incorporate the southern two thirds of the site together with the library and community facilities located in the north-eastern corner of the site. The north-western portion of the site, consisting of the retail/commercial spaces and residential units above, will be delivered by a third party developer under a future development agreement between the applicant and future developer. Although both contracts will have different start and end dates, it is envisaged that works will be on-going on both contracts at the same time.

The portions of the development to be completed by the applicant are envisaged to be delivered under a single contract but completed in phases due to the scale of the development. Those phases are likely to follow those indicated in Figure 3.1 but subject to change when detailed design is carried out and contractor appointed.

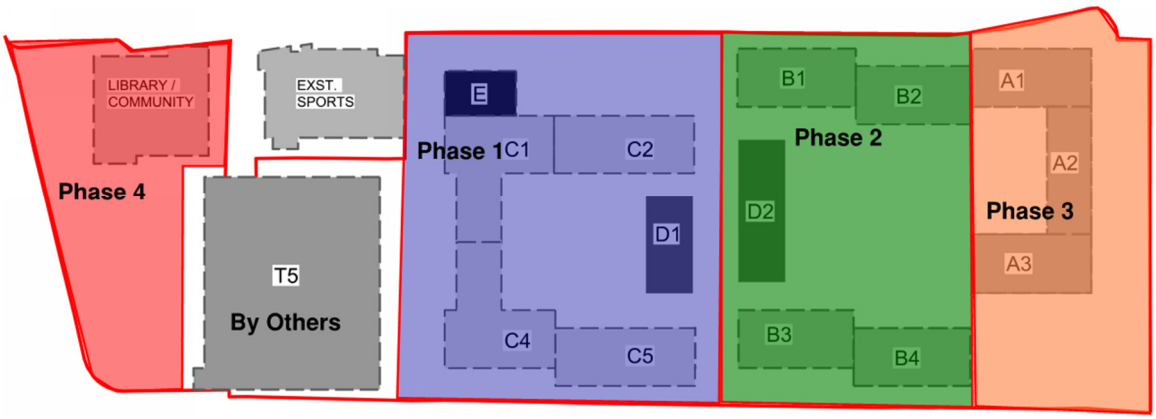

Figure 3.1 – Delivery of the Project

It is envisaged that the two contracts will be delivered by two different Main Contractors. The Main Contractors will be required to co-ordinate both their Construction Management Plans and their planned activities to ensure that the

more labour/deliveries intensive tasks are not being undertaken simultaneously on both site.

The items discussed in the following sections are relevant to both tranches of the overall development.

3.3 Site Management

The Main Contractor will be responsible for overall site management for the duration of the proposed works. Discussed below are a number of areas which the Main Contractor will be required to address within their Construction Environmental Management Plan and during the works.

3.3.1 Health & Safety

The Main Contractor must progress their works with reasonable skill, care, diligence and to, at all times, proactively manage the works in a manner most likely to ensure the safety and welfare of those carrying out construction works, interacting stakeholders, adjoining residents and the public. Contractors are further required to ensure that, as a minimum, all aspects of their works and project facilities comply with good industry practice, statutory instruments and all necessary consents. These will be further expanded and developed within the Main Contractor's Construction Management Plan in relation to Health & Safety requirements.

3.3.2 Hoarding & Site Security

The location of the site, adjacent to residential properties and public spaces, necessitates a prompt and detailed establishment of site compound and perimeter hoarding by the Main Contractor following possession of site. The overarching consideration in all elements of the site set-up will be to ensure the works can be undertaken in a safe manner for adjoining residents, members of the public, the Main Contractor and their staff.

The Main Contractor will commence by erecting a suitably robust hoarding around the site perimeter. This will typically take the form of a standard plywood hoarding up to a height of 3.6m with artwork or graphics embellishment. Appropriate access points will be provided to the site through the hoarding. Initially, this will be for personnel only but as works develop, vehicle access and egress routes through the hoarding will be developed.

The proposed hoarding alignment for the main construction phase of the works is indicatively shown orange below in Figure 3.2 below. It is noted that this plan layout may be altered locally during the works to facilitate different works such as piling, services tie ins etc. In addition, a further sub-division of the site will be required to facilitate the works to be undertaken to Tranche 5 under a separate development agreement as set out in Section 3.2.

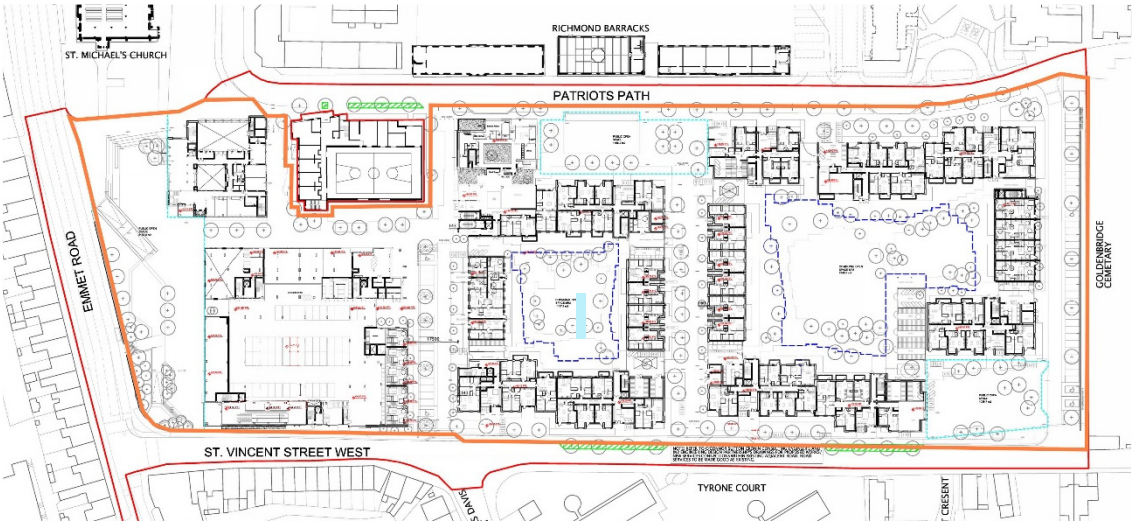

Figure 3.2 – Proposed Site Hoarding

The Main Contractor will be responsible for the security of the site for the duration of the works. The Main Contractor will be required to:

- Install and maintain adequate site hoarding to the site boundary with adequate controlled access and egress points;
- Maintain site security staff at all times;
- Install secure access in the form of turn-styles and gates for staff;
- Ensure restricted access is maintained to the works;
- Operate a site induction process for all site staff and visitors;
- Ensure all staff have current 'Safe Pass' and Construction Skills Cards;
- Monitor and record all deliveries to site and all material/waste taken off site for disposal to appropriate licences facility.

A fire watch system will be implemented and appointed fire watch supervisors will inspect the site at the end of each shift. All staff will be made fully aware of their individual responsibilities with regards to security and will undertake their work in line with guidelines. All staff and operatives will be fully inducted into the security, health and safety and logistic requirements on site.

3.3.3 Site Compound

The extent of compound and facilities required by the Main Contractor will vary throughout the duration of the works. The initial phase of works involving site set-up, surveys, diversions of services and commencement of siteworks are likely to have limited requirements for Contractors facilities. As the works advance, the Main Contractor's compound and facilities will be required to be enhanced. It is envisaged that such facilities will be provided within the hard and soft landscaped portions of the development, with locations to be selected by the Main Contractor to best suit their works methodologies and sequencing. As the main building works near completion, the requirements for facilities will be reduced and thus will allow the Main Contractor to remove sections of the compound to be able to complete the hard and soft landscaping works. Indicative possible locations for the Contractors compounds are shown in Figure 3.3 below.

Figure 3.3 – Possible Site Compounds

3.3.4 Site Access & Egress

The key driver in the provision of site access and egress is to ensure that safety of the public and the Contractor's staff if maintained at all times. It is envisaged that a number of access and egress points will be provided to suit both the division in the overall development and also the size of the site. This will entail access points from both Patriots Path and St Vincent Street West. Indicative possible layouts of these points are shown in Figure 3.4 below but it is noted that the selected Main Contractor's may alter these locations to suit their own particular site set up.

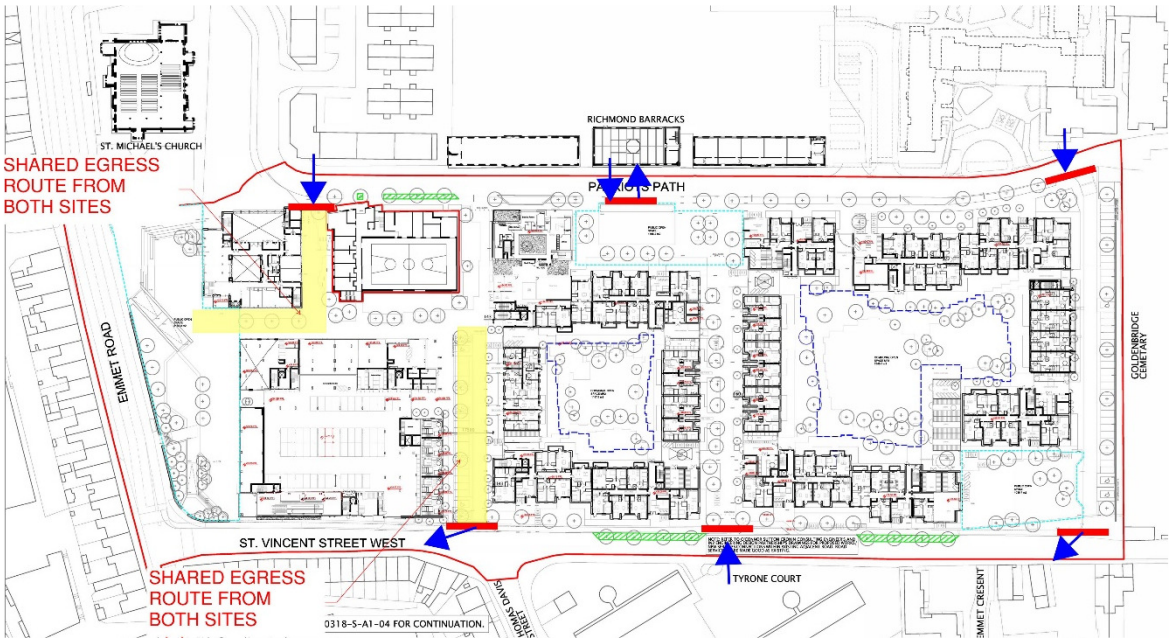

Figure 3.4 – Possible Site Access & Egress

3.3.5 Deliveries to Site

Construction deliveries to site will make use of the access and egress points indicated in Figure 3.4 above. A "just in time" approach will be generally be required for delivery of particular materials such as concrete formwork, reinforcement and prefabricated structural elements. That is to say that deliveries of materials will be planned, sequenced and programmed to ensure that materials as they are required on site. Works requiring multiple vehicle deliveries to site, such as large concrete pours, should be planned well in

advance with no queuing of trucks allowed or permitted on Emmet Road. It is envisaged that there may, from time to time, be a requirement for queuing of vehicles along Patriots Path or St Vincent Street West. The Main Contractor will be responsible for ensuring that this will not impact upon the movement of public pedestrians or vehicles along these routes. The Main Contractor will be required to provide a flagman to direct construction vehicles entering/exiting the site and manage the interaction between public and construction vehicle movements in a safe manner.

3.3.6 Storage of Materials on Site

There is scope for some storage of materials within the courtyard areas around the site. Any materials stored on site should be done so in a safe manner. Any fuels or chemicals on site should be stored within double sealed tanks with bunds to prevent any seepage of same into the groundwater. A fuel filling point should be set up on site with plant to be brought to this point for filling. All fuels and chemicals required to be stored on site should be clearly marked.

3.3.7 Removal of Materials from Site

The removal of materials from site will primarily be undertaken during the initial stages of the works. This will involve the removal of excavated material and pile arisings to facilitate the construction of the piled foundations and ground beams envisaged to be required. This phase of works will need to be managed effectively to ensure that no queuing of trucks occurs on public roadways. All trucks will have a built-on tarpaulin that will cover excavated material as it is being hauled off site and wheel wash facilities will be provided at all site egress points. All vehicles will make use of the access and egress points noted in Section 3.3.4 above. The Main Contractor will be required to provide a flagman to direct construction vehicles entering/exiting the site and manage the interaction between public and construction vehicle movements in a safe manner.

3.3.8 Craneage

It is envisaged that the works will require the use of multiple cranes on site. The final chosen structural form of the buildings will determine the likely type of cranes to be used, as discussed in Section 6 of this document. With a prefabricated solution-either precast concrete or timber frame-it is likely that mobile cranes would be used for the installation of same. If a cast in-situ concrete frame solution is adopted, then it is more likely that tower cranes would be used, with the layout of same to achieve maximum coverage of the site being determined by the Contractor. A mixed approach, with some tower cranes supplemented by mobile cranes, may also be adopted. The contractor will engage with and notify if necessary the Irish Aviation Authority in advance of the erection of tower cranes.

3.3.9 Water Supply

The Contractor will require a water source for the duration of the works. Water will be required for:

- Contractor's welfare facilities;
- Vehicle washdown (use recycled water where feasible);
- Dust suppression (as applicable);
- Curing of concrete in warm weather.

It is proposed that the Main Contractor will make use of existing water connections on the site for the purpose of water supply during the works.

3.3.10 Groundwater & Surface Water Control

The proposed development does not incorporate a full basement. There is a small section of below ground plant space provided under a portion of the residential Blocks. There will also be areas of excavations for foundations and below ground services. Any seepage of groundwater into these excavations or

surface ponding from rainfall events will be gathered locally to facilitate pumping with subsequent discharge, under licence, to the local drainage network. Prior to any discharge, the water will be passed through silt traps and hydrocarbon/oil interceptors within the site confines. This will result in the separation of sediment from the water prior to its discharge and will ensure that the water is of adequate quality before it enters the local authority sewerage drainage network.

The Contractor will be required to prepare and implement a Surface Water Management Plan (SWMP) that fully details all measures for groundwater and surface water control for agreement with the local authority prior to discharge of same from site. This SWMP will need to fully comply with all relevant mitigation measures as set out in the EIAR together with proposals within the Engineering Services Report.

3.3.11 Hours of Work

It is envisaged that the hours or work for the project will be as follows, unless conditioned otherwise:

- Monday to Friday 7.00am to 7.00pm
- Saturday 8.00am to 2.00pm
- Sundays and Bank Holidays No activity on site

We note that certain activities may be required, subject to prior agreement with Dublin City Council, to be undertaken outside of these working hours. It is acknowledged that special events such as large concrete pours, will require (in addition to the prior agreement with Dublin City Council) liaisons with the Local Authority, Garda and key stakeholders together with extensive pre-planning and programme management of site operations.

3.3.12 Public relations/Community Liaison

The site is located in the heart of Inchicore within a residential area. It is also adjacent to schools, a Primary Care Centre and other care settings. The Main Contractor will be required to ensure that all agents, sub-contractors and suppliers act in a manner to minimise disruption to the locality. Construction staff will be encouraged to remove all Personal Protective Equipment (PPE) and use wash down facilities before leaving the site.

The Project Team recognises the importance of the community liaison role in ensuring the smooth running of activities and in relation to residents and public welfare. Important key issues in ensuring good relations are:

- Regular community updates/leaflet drops/information briefings etc.;
- Correct points of contact, information and liaison;
- Responsiveness to contacts and information;
- Good housekeeping in all aspects of the operations.

Keeping people informed of site operations, through regular updates, mail drops & newsletters will help create good relationships and c co-operative atmosphere.

Due to the nature of construction works, it is essential to operate Good Neighbour Policies wherever possible. The key aspects of the Project Teams good neighbour policy include:

- Early implementation;
- Good client, Staff and Neighbourhood liaison;
- Reduction of nuisance factors;
- Clear access for neighbouring premises;
- Clear and concise information;
- Designated liaison officer.

It is essential that the Good Neighbour Policy and any necessary procedures be in place before any works are commenced on site.

3.3.13 Environmental Management

The appointed Contractor will be required to be accredited with ISO 14001 Environmental Management Systems.

3.3.14 Dust

A Dust Minimisation Plan will be formulated for the construction phase of the project. Dust prevention measures shall be included for control of any site airborne particulate pollution. The Contractor shall put in place a regime for monitoring dust levels in the vicinity of the site during the works using the Bergerhoff Method. The minimum criteria to be maintained shall be the limit specified by the environmental Protection Agency (EPA) for licensed facilities in Ireland which is 350mg/m^2/day as a 30-day average. The Contractor shall continuously monitor dust over the variation of weather and material disposal to ensure the limits are not breached throughout the project.

The level of monitoring and adoption of mitigation measures will vary throughout the construction works depending on the type of activities being undertaken and the prevailing weather conditions at the time. Additional monitoring and mitigation such as damping down of earth mounds on site would be undertaken if the prevailing weather conditions are dry and windy. It is noted that the stockpiling of excavated material on site is to be minimised with an immediate removal of excavated materials envisaged for the majority of the works.

3.3.15 Dirt

Given the volumes of traffic generated by aspects of the construction works, particularly during the excavations and groundworks phase, it shall be a requirement that the Contractor shall ensure, where appropriate:

- A wheel wash facility shall be provided at each egress point form the site (the proposed nature of the access and egress points may necessitate the use of more than one wheel wash for some phases of the works)
- All vehicles shall be required to pass through the wheel wash facility before exiting the site to the public road network via Patriots Path or St Vincent Street West. The wheel wash must be kept in place and used throughout the critical dirt generating activities of the construction works.
- Road sweepers shall be retained for the duration of the construction works with an increase in cleaning during the critical dirt/dust generating works. Regular road drain clearing will be implemented.
- Water supplies shall be recycled for use in the wheel wash. All waters shall be drained through appropriate filter material prior to discharge from the site.

3.3.16 Noise

The Contractor shall be required to monitor baseline noise levels at the site prior to commencement of the project, with a noise monitoring regime being developed for the duration of the construction works on site. Variation of noise levels from those experienced as part of everyday life in the area can result in disruption. The Contractor shall implement measures to minimise and mitigate noise levels during construction. Specifically, noise levels shall be kept below levels identified in Table 3.1 over or if further limits as imposed by the Local Authority.

Period over which criterion applies		Noise Impact Criterion ($L_{Aeq, 1hr}$)
Monday to Friday	Day 07:00 to 19:00	75dB
	Evening: 19:00 to 22:00	60dB*
	Night 22:00 to 07:00	The higher of 45dB of the ambient level*
Saturday: Day 08:00 to 14:00 (work outside these hours no higher than 45dB of ambient noise level)		65dB
Sundays and Bank Holidays	Day 08:00 to 14:00	60dB*

Note-*Construction activity at these times, other than that required for emergency works, will require the explicit permission of the relevant local authority

Table 3.1 – Noise Limit Criteria

3.3.17 Condition Surveys

Condition surveys of properties and structures adjoining the works shall be undertaken by a specialist survey company engaged by the Main Contractor prior to any works commencing on site. The survey company will record, within a Condition Report using photographs and sketches, the current structural condition of the property. These reports will assist to inform any specific requirements in terms of potential locations for monitoring during the works. The surveys should be undertaken on the following as a minimum:

- Boundary Wall of Goldenbridge Cemetery;
- Gate house of Goldenbridge Cemetery;
- Richmond Barracks;
- Inchicore Primary Care Centre;
- Inchicore Community Sports Centre;
- External elevation of Bulfin Court Residences;
- External elevation of Tyrone Place;
- External elevation of residences along St Vincent Street West;
- Remnant of historic boundary wall to Richmond Barracks at junction of Emmet Road/St. Vincent Street West;

- Roads and footpaths to the entire perimeter of the site.

It is noted that phased nature of the delivery of the works will require either surveys to be undertaken on multiple occasions or may only be undertaken at certain locations for one phase of the works.

3.3.18 Vibrations

Vibration monitoring (as a minimum) of the following areas shall be carried out for the duration of the works:

- Boundary wall of Goldenbridge Cemetery;
- Richmond Barracks;
- Sports Centre;
- Remnant wall of Richmond Barracks at junction of Emmet Road;
- Other areas to be agreed with project team.

Vibration monitoring stations should continually log vibration levels (including associated frequency) using the Peak Particle Velocity parameter (PPV, mm/s) in the X, Y and Z directions, in accordance with BS ISO 4866: 2010: Mechanical vibration and shock – Vibration of fixed structures – Guidelines for the measurement of vibrations and evaluation of their effects on structures. Vibration monitors, of both aural and visual type, with real time outputs to be located at agreed points.

The mounting of the recording equipment to the vibrating structure (or surface supporting sensitive equipment) shall comply with BS ISO 5348: 1998: Mechanical vibration and shock – Mechanical mounting of accelerometers. In summary, the following ideal mounting conditions apply:

- The recording equipment and its mountings should be as rigid as possible;
- The mounting surfaces should be as clean and flat as possible;
- Simple symmetric mountings are best, and;

- The mass of the mounting should be small in comparison to that of the structure under test.

The vibration limits for the duration of the construction works shall be set in line with the vibration criteria to be adopted at nearby sensitive and residential properties to avoid cosmetic damage, as taken from the German Standard DIN 4150-3 (1999-02) *Structural Vibration – Effects of vibration on structure*.

Traffic light system to be in place consisting of:

- Green-vibrations below all threshold limits-OK to proceed;
- Amber-vibrations exceed first threshold limit (2/3^{rds} of limit)-Stop and check;
- Red-vibrations exceed second threshold-Stop and action.

3.3.19 Harmful Materials

Harmful materials will be stored on site for use in connection with the construction works only. The following mitigation measures will be included for the works to prevent any spillages of fuels and prevent any resulting soil and/or groundwater quality issues:

- Designation of bunded refuelling areas on site;
- Provision of spill kit facilities across the site;
- Where mobile fuel bowsers are used, the following measures will be taken:
    - Any flexible pipe, tap or valve will be fitted with a lock and will be secured when not in use;
    - The pump or valve will be fitted with a lock and secured when not in use;
    - All bowsers to carry a spill kit and operatives must have spill response training;
    - Portable generators or similar fuel containing equipment will be placed on drip trays.

In the case of drummed fuel or other potentially polluting substances which may be used during construction, the following measures will be adopted:

- Secure storage of all containers that contain potential polluting substances in a dedicated internally bunded chemical storage cabinet unit or inside a concrete bunded area;
- Clear labelling of containers so that appropriate remedial measures can be taken in the event of a spillage;
- All drums to be quality approved and manufactured to a recognised standard;
- If drums are to be moved around site, they should be done so secured and on spill pallets;
- Drums to be loaded and unloaded by competent and trained personnel using appropriate equipment.

3.4 Waste Management

3.4.1 Introduction

The appointed contractor will be responsible for the preparation of a detailed site-specific resource and waste management plan (RWMP) to be submitted to Dublin City Council prior to commencement of works. Discussed below are key areas that will be developed upon by the Main Contractor in their detailed plan. In addition, the RWMP will incorporate the measures contained in the EIAR and the RWMP prepared by Byrne Environmental as part of this application.

3.4.2 Waste Management in Ireland

Overarching Legislation

The overarching legislative instruments governing waste management in Ireland are as follows:

- Waste Management Act 1996 (S.I. No. 10 of 1996) as amended 2001 (No. 36 of 2001), 2003 (No. 27 of 2003) and 2001 (No. 20 of 2011)

- Sub-ordinate legislation includes:
  - European Communities (Waste Directive) Regulations 2011 (S.I. 126 of 2011) as amended 2011 (S.I. No. 323 of 2011) and 2016 (S.I. 315 of 2016);
  - Waste Management (Collection Permit) Regulations 2007 (S.I. No. 820 of 2007) as amended 2008 (S.I. No. 87 of 2008), 2015 (S.I. No. 197 of 2015) and 2016 (S.I. No. 24 and 346 of 2016);
  - Waste Management (Facility Permit and Registration) Regulations 2007 (S.I. No. 821 of 2007) as amended 2008 (S.I. No. 86 of 2008), 2014 (S.I. No, 320 and No. 546 of 2014) and 2015 (S.I. No. 198 of 2015);
  - Waste Management (Licensing) Regulations 2000 (S.I. No. 185 of 2000) as amended 2004 (S.I. No. 395 of 2004), 2010 and (S.I. No. 350 of 2010);
  - Waste Management (Packaging) Regulations 2014 (S.I. 282 of 2014) as amended 2003 (S.I. No. 61 of 2003) as amended 2004 (S.I. No. 871 of 2004), 2006 (S.I. No. 308 of 2006) and 2007 (S.I. No. 798 of 2007);
  - Waste Management (Planning) Regulations 1997 (S.I. No. 137 of 1997);
  - Waste Management (Landfill Levy) Regulations 2015 (S.I. No. 189 of 2015) as amended 2011 (S.I. No. 434 of 2011) as amended 2012 (S.I. No. 221 of 2012);
  - European Union (Waste Electrical and Electronic Equipment) Regulations 2014 (S.I. No. 149 of 2014);
  - European Union (Batteries and Accumulators) Regulations 2014 (S.I. No. 283 of 2014) as amended 2014 (S.I. No. 349 of 2014) and 2015 (S.I. No. 347 of 2015);
  - Waste Management (Food Waste) Regulations 2009 (S.I. 508 of 2009);
  - European Union (Household Food Waste and Bio-waste) Regulation 2015 (S.I. No. 191 of 2015);

  - Waste Management (Hazardous Waste) Regulations 1998 (S.I. No. 163 of 1998) as amended 2000 (S.I. No. 73 of 2000);
  - Waste Management (Shipments of Waste) Regulations 2007 (S.I. No. 419 of 2007) as amended;
  - Waste Management (Movement of Hazardous Waste) Regulations 1998 (S.I. No. 147 of 1998);
  - European Communities (Transfrontier Shipment of Waste) Regulations 1998 (S.I. No. 147 of 1998) as amended 1994 (SI 121 of 1994);
  - European Union (Properties of Waste which Render it Hazardous) Regulations 2015 (S.I. No. 233 of 2015).
- Litter Pollution Act 1997 (S.I. No. 12 of 1997) as amended by Protection of the Environment (amendment) Act 2003 as amended;
- Planning and Development Act 2000 as amended (S.I. No. 30 of 2010) and 2015 (S.I. No. 310 of 2015);
- Protection of the Environment Act 1992 as amended 2003 (S.I. No. 413 of 2003) and by Planning and Development Act 2000 as amended (S.I. No. 30 of 2010).

The above Acts and Regulations transpose European Union policy and Directives into Irish law. The over-riding 'Duty of Care' principle implies that the producer is responsible for waste from the time it is generated through until its legal disposal (including its method of disposal.). As it is not practical in most cases for the waste producer to physically transfer all waste from where it is produced to the final disposal area, waste contractors will be employed to transport waste to the final waste disposal site.

A waste collection permit, issued by the National Waste Collection Permit Office (NWCPO), must be held by every waste contractor engaged on the project. Waste receiving facilities must also be appropriately permitted or licensed to accept waste. Operators of such facilities cannot receive any waste, unless in

possession of a waste permit granted by the relevant Local Authority under the Waste Management (Facility Permit & Registration) Regulations 2007 and Amendments or a waste licence granted by the Environmental Protection Agency (EPA). The permit/licence held will specify the type and quantity of waste able to be received, stored, sorted, recycled and/or disposed of at the specified site.

National Waste Management Policy

The 1998 '*Changing Our Ways*' policy document by the Irish Government identified objectives for the prevention, minimisation, reuse, recycling, recovery and disposal of waste in Ireland. The target for C&D waste in this report was to recycle at least 50% of C&D waste within an initial five-year period with incremental increases to at least 85% by 2013. A waste industry task force of the *Forum for the Construction Industry* released '*Recycling of Construction and Demolition Waste*' recommending the development of a voluntary construction industry programme to meet Government objectives for the recovery of C&D waste. '*A Resource Opportunity - Waste Management Policy in Ireland*' published in 2012 stresses the environmental and economic benefits of better waste management, particularly in relation to waste prevention. In respect of C&D waste, the report commits to undertaking a review of specific producer responsibility requirements for C&D projects above a certain threshold.

The National Construction and Demolition Waste Council (NCDWC) published '*Best Practice Guidelines for the Preparation of Waste Management Plans for Construction and Demolition Projects*' in 2006 in conjunction with the Department of the Environment, Heritage and Local Government (DoEHLG). The Guidelines outline the issues that need to be addressed at the pre-planning stage of a development all the way through to its completion. These Guidelines have been followed in the preparation of this document and include the following elements:

- Predicted C&D wastes and procedures to prevent, minimise, recycle and reuse wastes;
- Waste disposal/recycling of C&D wastes at the site;
- Provision of training for waste manager and site crew;
- Details of proposed record keeping system;
- Details of waste audit procedures and plan; and
- Details of consultation with relevant bodies i.e. waste recycling companies, Dublin County Council etc.

In accordance with Section 3 of the Guidelines Construction and Demolition Waste Management plans should be submitted as part of development proposals for projects in excess of any of the following thresholds:

- New residential development of 10 units or more;
- New developments other than above, including institutional, educational, health and other public facilities, with an aggregate floor area in excess of 1,000m^2;
- Demolition/renovation/refurbishment projects generating in excess of 100 cubic metres in volume of construction and demolition waste, and;
- Civil engineering projects in excess of 500 cubic metres of waste materials used for development works on the site.

A RWMP, as a minimum, should include provision for the management of all construction and demolition waste arising on site, and make provision for the re-use of said material and/or the recovery or disposal of this waste to authorised facilities by authorised collectors. Where appropriate, excavated material from development sites should be reused on the subject site.

The proposed development at Emmet Road requires a RWMP under the following two criteria:

- New residential development of 10 units or more;

- New developments other than above, including institutional, educational, health and other public facilities, with an aggregate floor area in excess of 1,000m^2.

These guidance documents are considered to define best practice for construction and demolition projects in Ireland and describe how construction and demolition projects are to be undertaken such that environmental impacts and risks are minimised and maximum levels of waste recycling are achieved.

Regional Waste Management Plans

The proposed development is located within the Dublin City Council (DCC) administrative area. A new Regional Waste Management Plan for the Eastern-Midland Region was launched in November 2014 which covers the four Dublin Councils (DCC, FCC, DRCC & SDCC) as well as Kildare, Laois, Longford, Louth, Meath. Offaly, Wicklow and Westmeath. The final Eastern-Midland Region Waste Management Plan (EMWR) was published in late May 2015 to replace the 'Waste Management Plan for the Dublin Region 2005 – 2010'. This was replaced due to changing National policy as set out in '*A Resource Opportunity: Waste Management Policy in Ireland*' and changes being enacted by the Waste Framework Directive (2008/98/EC). The Plan's implementation will be led by the new Eastern-Midlands Regional Waste Office based in Dublin City Council.

The three key objectives of the Eastern-Midlands Region Waste Management Plan are:

- Prevent waste: a reduction of one per cent per annum in the amount of household waste generated over the period of the plan.
- More recycling: increase the recycle rate of domestic and commercial waste from 40 to 50 per cent by 2020.
- Further reduce landfill: eliminate all unprocessed waste going to landfill from 2016.

The strategic approach of the new plan is to place a stronger emphasis on preventing waste and material reuse, instead focusing on increasing the collection of quality materials to improve recycling. The plan seeks to further reduce the role of landfill in favour of higher value recovery options. The objective Eastern Midlands Region Waste Management Plan is to achieve more sustainable waste management practices in the C&D sector. The recycling rates for C&D waste adopted by the EMWR are 82%. The EC (Waste Directive) Regulations, 2011 sets a 70% target for the re-use, recycling and recovery of man-made C&D waste in Ireland by December 2020. It is reported by the EPA that this has already been achieved with a 97% waste recovery rate.

The Dublin City Development Plan 2016-2022 and the Draft Dublin City Development Plan 2022-2028 provides policies and objectives in relation to waste management in the city which are reflective of overarching EU, National and Regional policy and legislation.

The main objective of DCC policies in the current development plan and draft development plan is to promote an increase in the amount of waste re-used and recycled consistent with the Regional Waste Management Plan and Waste Hierarchy and facilitate recycling of waste through adequate provision of facilities and good design in new developments.

3.4.3 Waste Categorisation

Typical non-hazardous and hazardous waste streams generated by construction and demolition activities at typical sites are shown in Table 3.2 along with their accompanying European Waste Code (EWC) Classification.

It is anticipated that the non-hazardous materials listed above will be encountered during the works on the Emmet Road development with the potential for some of the hazardous materials as discussed over.

Waste Materials Categorisation		
Category	Description	Code
Non-Hazardous	Metals	17 04
	Wood, glass, plastic	17 02
	Soil, stones, dredged soils	17 05
	Gypsum based materials	17 08
	Cardboard	15 01 01
	Glass	17 02 02
	Bituminous mixtures, coal tar, tar products	17 03
	Concrete, bricks, tiles, ceramics	17 01
Hazardous	Electrical and Electronic Components	16 02
	Liquid Fuels	13 07
	Wood Preservatives	03 02
	Batteries	16 06
	Soil and stones containing dangerous substances	17 05 03
	Waste construction material containing asbestos	17 06 05
	Other construction and demolition wastes containing dangerous substances	17 09 03

Table 3.2 – Waste Material Categorisation

Non-Hazardous Materials

The classification of materials as non-hazardous and/or hazardous will be based on the www.hazwasteonine.com web based system as well as classification using Waste Acceptance Criteria in accordance with the European Communities (EC) Council Decision 2003/33/EC, which establishes criteria for the acceptance of waste at landfills.

In addition, non-hazardous waste materials are likely to be generated during all phases of the construction works from casting of concrete, through to installation of face, mechanical and electrical services and internal fit-out.

Hazardous Materials

There is the potential for hazardous materials to be uncovered, particularly during the demolitions and excavations phases of the project as discussed below:

- ***Asbestos***

  A type 3 Asbestos Survey will be carried out by a certified company on behalf of the Main Contractor prior to any demolition works commencing on site. If any asbestos is uncovered, the removal of same must be carried out by a suitably qualified contractor in accordance with S.I. No. 386 of 2006 Safety, Health and Welfare at Work (Exposure to Asbestos) Regulations 2006-2010. All material to be taken to a suitably licensed or permitted facility.

- ***Contaminated Soil***

  The building works will require excavations to facilitate foundation construction, together with installation of below ground services and the section of lower ground floor plant space. Given the brownfield nature of the site, there is potential for the soil to have elements of contaminant contained within it. An initial assessment of the site has been undertaken by OCSC to classify the materials to be encountered on site from a waste soils perspective. The Main Contractor will be responsible for the classification of all material to be removed from site and compliant disposal in accordance with the Wate Management Act 1996 as amended and all relevant Regulations.

- ***Fuels/Oils***

  In the event that there is to be any on site storage of fuels or oils during the demolition, piling, excavation or basement construction phases of the project, then all storage tanks and draw-off points will be bunded and located in a dedicated, secure are of the site. Provided that these requirements are adhered to, and site crew are trained in the appropriate refuelling techniques, it is note expected that there will be any fuel/oil wastage at the site.

3.4.4 Waste Arisings

The Environmental Protection Agency (EPA) produce figures on the amounts of waste generated by various developments. These figures are contained in EPA databases. The split between individual C&D waste categories is shown in Table 3.4.

Waste Types	%
Metals	2.2
Concrete, Brick, Tile, Gypsum	7.2
Bituminous mixtures	1.3
Mixed C&D waste	4.5
Soils & Stones	84.8
Total	100

Table 3.4 – Waste Generation

Further figures are available for typical overall waste generation figures for construction sites based on the type and scale of development. Therefore, by using the EPA category split figures and the industry standard overall waste generation figures, the C&D waste arising's for the subject site can be estimated.

It should be noted that until final materials and methods of construction have been determined it is not possible to predict with a high level of accuracy the construction waste that will be generated. These details will be required to be included by the Main Contractor in their RWMP to be prepared and agreed with DCC in advance of works commencing on site.

<u>Site Waste Management Operations</u>

Waste materials generated will be segregated on site where it is practical. Where the on-site segregation of certain wastes types is not practical, off-site segregation will be carried out. There will be skips and receptacles provided to

facilitate segregation at source. All waste receptacles leaving site will be covered or enclosed. The appointed waste contractor will collect and transfer the wastes as receptacles are filled.

Any soil removed off-site will be carried by contractors licensed under the Waste Management Acts 1996 - 2008, the Waste Management (Collection Permit) Regulations 2007 and Amendments and the Waste Management (Facility Permit & Registration) Regulations 2007 and Amendments. Waste arising shall be handled by an approved waste contractor holding a current waste collection permit. All waste arising requiring disposal off-site will be disposed of at a facility holding the appropriate licence or permit, as required.

Written records will be maintained by the contractor(s) detailing the waste arising throughout the construction and demolition phases, the classification of each waste type, the contact details and waste collection permit number of all waste contactors who collect waste from the site and the end destination and waste facility permit or licence number for all waste removed and disposed off-site. Dedicated bunded storage containers will be provided for hazardous wastes such as batteries, paints, oils, chemicals etc., if required.

3.4.5 Record Keeping, Auditing & Consultation

Record Keeping

Records will be kept for each waste material, which leaves the site, either for reuse on another site, recycling or disposal. A system will be put in place to record the construction waste arisings on site.

The Waste Manager or a member of his team will record the following:

- Waste taken for Reuse off-site (i.e. for capping of landfill cells or at another site);
- Waste taken for Recycling;
- Waste taken for Disposal;
- Reclaimed waste materials brought on-site for reuse.

For each movement of waste on- or off-site, the Waste Manager will obtain a signed docket from the contractor, detailing the weight and type of the material and the source and destination of the material. This will be carried out for each material type. This system will also be linked with the delivery records. In this way, the percentage of construction waste generated for each material can be determined.

The system will allow the comparison of these figures with the targets established for the recovery, reuse and recycling of construction waste and to highlight the successes or failures against these targets.

Outline Waste Audit Procedure

The appointed Waste Manager on site will be responsible for conducting a waste audit at the site. A review of all the records for the waste generated and transported on- or off-site will be undertaken. If waste movements are not accounted for, the reasons for this should be established in order to see if and why the record keeping system has not been maintained.

A Summary Report will be prepared and compared with the established recovery/reuse/recycling targets for the site. Each material type will be examined, in order to see where the largest percentage waste generation is occurring. The waste management methods for each material type will be reviewed in order to highlight how the targets can be achieved. Waste management costs will also be reviewed.

Consultation

Consultation with waste contractors and Dublin City Council through the construction phase will be pursued to ensure best practices for waste management are being followed on site.

3.5 Construction Traffic

The proposed development will have a certain amount of construction traffic associated with same to facilitate the works. As the site is located outside Dublin City Centre, the heavy vehicle restrictions imposed by Dublin City Council do not govern the traffic management proposals. However, the construction access strategy to serve the site will still need to be developed by the Main Contractor in a manner taking cognisance of the designated HGV routes in the city centre. These routes are indicated in Figure 3.5 below with approximate site outline included.

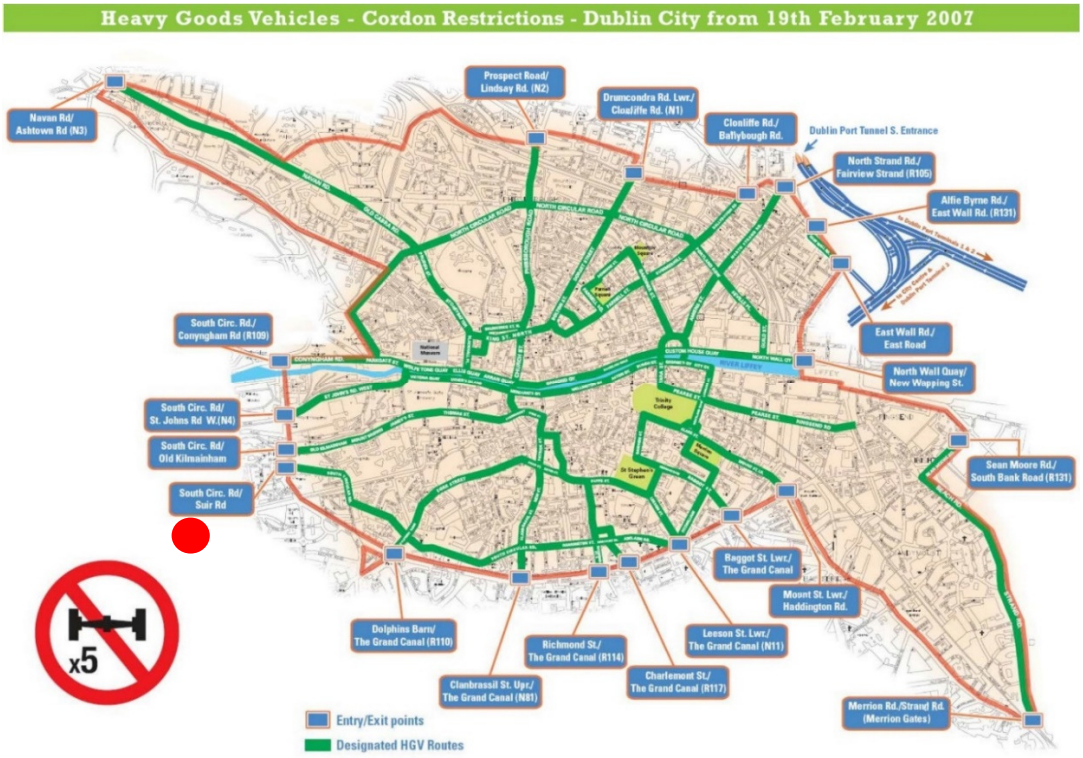

Figure 3.5 – Heavy Goods Vehicle Cordon Restrictions (with site location)

3.5.1 Traffic Generation

It is envisaged that traffic will be generated for the duration of the works by the proposed development. This will be from a number of sources:

- Hauling of excavated material off site;

- Concrete deliveries;
- Deliveries of reinforcement & formwork to site;
- Deliveries of prefabricated structural elements;
- Deliveries of glazing and precast panels for façade;
- Deliveries of building services equipment to site;
- Construction Workers.

It is noted that there will be no designated parking for construction workers on or around the site.

The levels of construction traffic will vary during the weeks with peak volumes predicted to be during the following activities:

- **Piling & Foundations**

  The piling and excavation works will require hauling of spoil off site. This will occur in tandem with deliveries for concrete and reinforcement for the piled foundations and ground beams.
- **Concrete pours**

  Concrete pours will be required throughout the works, with the size/volume of same dependant on the final structural form selected. In addition to the foundations/ground beams, concrete pours will be required to the library/community building as well as to the commercial spaces. All concrete works will require continued supply of concrete to site with deliveries for the duration of the period of the pour. The concrete works will be required to be carefully planned, sequenced and managed by the Main Contractor to ensure that works can be undertaken without undue disruption to the neighbourhood.
- **Deliveries of Prefabricated structural elements**

  The selection of the chosen structural form for the residential blocks may necessitate the delivery of precast concrete elements. These deliveries will need to be carefully planned, sequenced and managed by the Main Contractor to ensure that they are undertaken at the

appropriate time in the works sequence so as not to cause undue disruption to the neighbourhood.

3.5.2 Contents of Traffic Management Plan

The Construction Phase Traffic Management Plan will be prepared by the appointed Contractor and shall identify:

- Primary Contact Name;
- Primary Contact Mobile Phone Number;
- Secondary Contact Name;
- Secondary Contact Mobile Phone Number.

The primary contact shall act as a Liaison Officer with the Local Authority, Gardai, local residents and businesses.

The Construction Stage Traffic Management Plan is to be formulated in the style as specified in the Dublin City Council Publication *"Directions for the Control and Management of Roadworks in Dublin City",* March 2005 with reference to the DTO publications *"Traffic Management Guidelines Manual"* and the Traffic Signs Manual". The document should contain information on the following issues:

- Temporary signage (type and location);
- Temporary road markings (type and location);
- Temporary changes to existing signage and markings required to enable a road closure, if applicable;
- Location of proposed temporary traffic signals, if applicable;
- Arrangements for local access and pedestrian access;
- Proposed lighting arrangements;
- Proposals for the use of flagmen;
- Proposals to erect barriers;
- Proposals to change street infrastructure to enable road works;

- Proposals for pedestrian movements including those of mobility impaired;
- Proposed changes to on-street parking;
- Arrangements that will apply during the road works.

4 PRE-CONSTRUCTION ACTIVITIES

4.1 Prior to Commencement of Development

It is noted that there are a number of existing buildings on site to be demolished to facilitate the proposed development as discussed under Section 1.4 of this document. The demolition of these buildings is envisaged to be undertaken in advance of the Emmet Road Development as part of permitted Part 8 Development 2221/21.

4.2 Site Set-Up

The location of the site adjacent to a residential area within the heart of Inchicore village increases the requirement for a prompt and detailed establishment of the site compound by the Contractor following possession of the site. The overarching consideration in all elements of the site set-up will be to ensure the works can be undertaken in a safe manner for adjoining residents, users of adjoining buildings, members of the public and the Contractor & their staff.

Please refer to section 3.3 of this document for additional detail on site set-up, hoarding and security etc.

4.3 Surveys

A number of surveys will be required prior to works commencing on site. This include:

- Condition Surveys of adjoining properties (refer to section 3.3.17)
- Targeted slit trench surveys are required supplement the GPR survey undertaken to date to establish location and detail of all existing services on site.
- Baseline readings for noise, vibration, dust etc in advance of the establishment of monitoring regime and action of same;

- Targeted slit trench investigations/trial pits at site boundaries to establish any constraints;
- Surveys to identify asbestos or toxic/hazardous materials which may be present on site.

4.4 Monitoring Regime

A full and detailed monitoring regime to assess potential impact of noise, vibration, dust etc. to a level agreed between the Main Contractor and the project team is to be implemented in advance of any works commencing on site.

5 FOUNDATION & SUB-STRUCTURE WORKS

5.1 Overview

A detailed site investigation of the entire site has been undertaken to inform the proposed foundation solution. The current envisaged piled foundation solutions are shown in Figure 5.1 below for the Community and Library Hub building-foundations to other buildings will be of a similar form. It is noted that these proposed foundation solutions will be interrogated further during the detailed design phase of the project and may be subject to development.

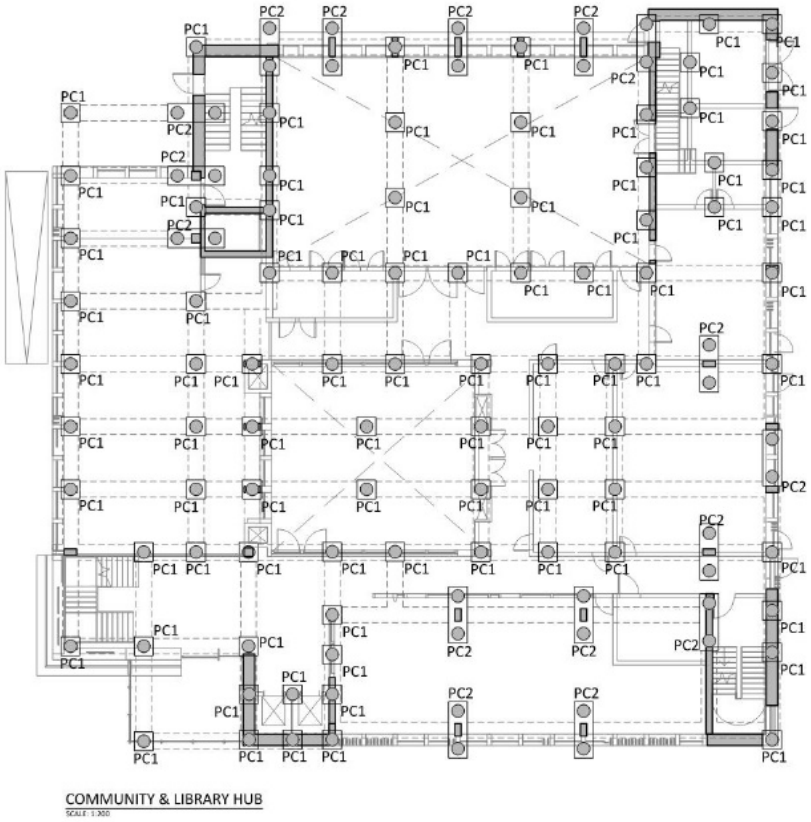

Figure 5.1 – Envisaged Foundation Solutions-Community and Library Hub

5.2 Piling

The proposed piled foundations will be constructed using rotary bored techniques. The piles will be constructed through the overburden soil with the

piles to be end bearing in the underlying bedrock. Due to the size of the site, it is envisaged that a number of piling rigs will be on site simultaneously to complete the necessary piling works. The rotary boring of the piles will generate spoil which will be hauled off site and disposed of at an appropriately licenced facility. The casting of the piles will require concrete deliveries and deliveries of reinforcement cages for the duration of this element of works.

In addition to the piled foundations, a small section of secant pile wall will be required to the perimeter of the lower ground floor plant space. This wall will be formed from a series of interlocking male and female bored piles along the c.115m perimeter of the lower ground floor space. The provision of a secant pile wall to facilitate excavations is a tried and trusted construction method, particularly within Dublin City. It has been adopted successfully on numerous projects for which O'Connor Sutton Cronin have acted as Structural Engineers- even in close proximity to existing buildings.

Figure 5.2 – Image of piling works and secant pile wall

5.3 Excavations

As the piling works advance on site, works will commence on excavations to form the ground beams. Excavations will commence with removal of topsoil from under the building footprint together with excavations along the lines of the ground beams-these will typically align with the perimeter of the proposed buildings together with the internal load bearing structural elements.

It is noted that additional excavations will be required to facilitate the lower ground floor plant space. The footprint of this space only constitutes a very small portion of the overall site and excavation volumes will be c. 1,800m^3 of material to be removed off site.

5.4 Lower Ground Floor Slab

The lower ground floor slab consists of a cast in-situ RC slab supported on a series of piled foundations and will be constructed in a sequence as follows:

- Completion of overburden excavation;
- Breaking down of piles;
- Immediate placing of a concrete blinding layer to protect the foundation formation;
- Installation and placing of waterproofing membrane & drainage;
- Placing of reinforcement;
- Casting & curing of concrete.

5.5 Ground Beams

The actions required to form the ground beams will consist of:

- Breaking down of piles to correct levels;
- Completion of excavations;
- Fixing of reinforcement;
- Casting of concrete.

Once the concrete has cured sufficiently, works can proceed on the follow on works.

5.6 Below slab services

The variety of building uses at ground floor will require the provision of services below slab. These will include foul drainage and water supply. These services will be provided in tandem with the construction of the ground beams.

5.7 Ground floor slab

The nature of the ground conditions on site necessitate that the ground floor slabs be suspended in all instances. Thus, a precast concrete ground floor slab will be provided to span between ground beams. An indicative detail of the suspended ground floor slab and build-up is shown in figure 5.3 below. It is noted that the precast slab and structural screed will be provided first to facilitate the construction of the superstructure-the insulation, build-up and finishes can be progressed as the works proceed on the upper levels.

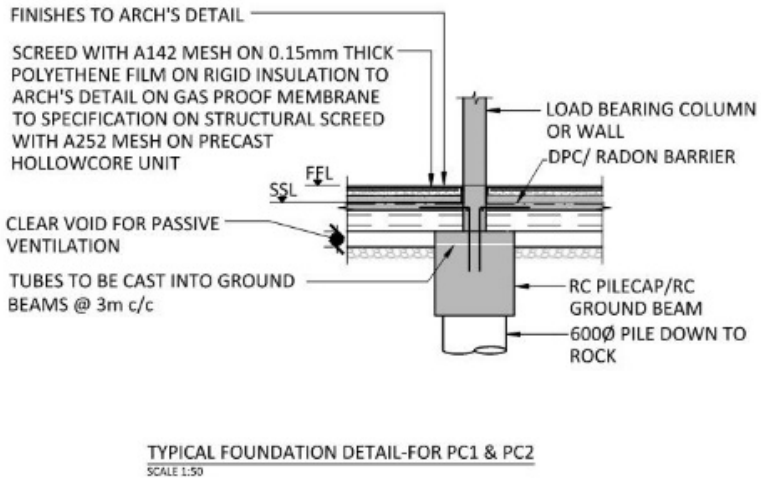

Figure 5.3 – Image of typical ground floor detail

6 SUPERSTRUCTURE

6.1 Overview

The proposed development is as described in Section 1.5 of this document and as per Figure 6.1 below.

Figure 6.1 – Image of overall development

6.2 Structural Works

A number of different possible structural forms are being considered for the proposed development. The forms of structure will be evaluated throughout the detailed design phase of the project with the possibility that a combination of a number of options will ultimately be chosen to be brought forward to construction stage as the final design solutions.

Discussed below is a brief description of the forms of structure and how they could be adopted within the proposed development.

6.2.1 Structural Options

Cast In-Situ Frame

A cast in-situ concrete frame is arguably the most commonly used form of multi-storey residential developments currently on the Irish market. It generally consists of a series of columns-either rectangular or rectilinear-aligned with dividing walls between residential units or internal partition walls which support a flat slab at each level. This flat slab soffit provides an uninterrupted route for services distribution at each level.

Figure 6.2 – Example of In-situ Flat Slab Construction

If a cast in-situ frame solution were to be adopted, the construction sequence would follow:

- Completion of ground beams;
- Fixing of reinforcement for rising elements (columns and walls) from ground to underside of first;
- Placing of formwork to rising elements and casting of same;
- Placing of formwork and propping to underside of first floor slab;
- Fixing of reinforcement to first floor slab;
- Casting of first floor slab;
- Fixing of reinforcement for rising elements (columns and walls) from first to underside of second and repeat.

Precast Concrete Frame

Precast concrete frames can consist of a number of differing forms. With residential buildings, the general layouts give rises to cross walls which allow

for a logical layout of precast elements. These precast walls can be twin wall construction which would allow for a high quality finish to both exposed faces or of solid precast construction. The walls would support a precast slab (either wideslab or hollowcore) with a structural screed topping. An example of this form of structure is shown in Figure 6.3 below.

Figure 6.3 – Precast Concrete Frame Construction

If a precast solution were to be adopted, the construction sequence would follow:

- Completion of ground beams;
- Erection of precast twinwalls from ground to underside of first;
- Casting of in-situ element within twinwall;
- Placing of precast floor slabs at first floor level;
- Casting of structural screed topping;
- Erection of precast first to underside of second and repeat.

Timber Frame Construction

It is envisaged that timber will be used in the structure of a number of buildings on site. These include the duplex units within the main residential spaces and also the Community Hub and Library Building. The timber form of construction will differ given the different building uses with a timber joist and timber stud

walling solution for the residential spaces but a combination of glulam and cross laminated timber for the Community Hub and Library Building.

If a timber frame solution were to be adopted, the construction sequence would follow:

- Completion of ground beams;
- Erection of rising elements (walls and columns) from ground to first;
- Installation of first floor (timber joists or glulam beams & CLT flooring)
- Casting of first floor slab;
- Erection of rising elements (walls and columns) from first to underside of second and repeat.

6.3 Façade Works

Throughout the design, a strong emphasis has been placed on durability and robustness of materials as an integral aspect of long term sustainability of low maintenance and the use of natural materials such as clay bricks, clay blocks, timber and lime-based render is maximised.

A variety of façade types are proposed throughout the development including:

- Brick;
- Glazing;
- White lime render;
- Terracotta tiles;
- Curtain walling;
- Hardwood timber cladding;

6.4 Internal Fit-Out

The internal fit out works will follow on once the building has been made weather tight by the façade. The nature of the fit out works will vary between the Residential and Commercial spaces but would generally follow a sequence such as:

- Installation of any stud walls or internal partitions as well as any areas of raised access floors;
- Installation of flooring and wall finishes
- Installation of ceilings (following completion of M & E fit-out noted below);
- Installation of kitchens and bathrooms;
- Installation of equipment and associated connections to services;
- Completion of finishes

6.5 M & E Fit-Out/Commissioning

The Mechanical and Electrical works/commissioning will follow the completion of the superstructure and façade. The works will involve:

- M & E first fix will be progressed in tandem with the ground works and structure and will include all underground services and the installation of primary mechanical and electrical services distribution including pipework, cable trays, bracketing and ductwork;
- M & E second fix will commence once the buildings are weathertight and will included the installation of sensitive equipment as well as the secondary distribution of pipework and cables within the buildings;
- M & E third fix will follow the installation of walls and ceilings within the buildings and includes the final installation of sanitary ware, lights, switches, sockets etc.
- Commissioning and testing to be completed.

7 SITEWORKS

7.1 Overview

The siteworks for the proposed development will entail the installation of all below ground services distribution around the site as well as the proposed landscaping works.

7.2 Site Services

A large variety of services are required to be constructed to provide functionality to the proposed development. These services include items such as storm drainage, foul drainage, water supply, power supply, gas supply etc.

The site services works are likely to proceed following completion of the foundations of the main buildings and will continue throughout the superstructure works.

The site services works will generally involve:

- Excavation of services trench;
- Placing of bedding as required for each service;
- Placing of service pipe/conduit within the trench;
- Placing of warning tape as required by each utility;
- Backfilling of trench.

It is noted that certain portions of the site services works will require connections to the public utilities outside of the site boundaries, with works to be undertaken in public spaces. These works will be undertaken under agreement with both the relevant departments of Dublin City Council and the utility provider. Appropriate method statements will be required to be prepared for each element of work including appropriate protection measures to be put in place to facilitate the works.

7.3 Hard & Soft Landscaping

The externals to the site are made up of a number of differing soft and hard landscaping finishes.

The soft finishes include:

- Private gardens;
- Public gardens;
- Internal courtyards.

The hard landscaping includes:

- Pathways;
- Access roads;
- Carparking;
- Communal areas;
- Plaza areas.

The hard landscaping works for the site are there to enhance the overall design, compliment the soft finishes and allow for pedestrian and vehicular traffic to and around the site. The hard and soft landscaping works will be undertaken following the completion of the main elements of construction.

The soft landscaping works will involve:

- Placing of topsoil;
- Planting of tress and shrubs;
- Seeding of grass;
- Placing of furniture and fittings.

The hard landscaping works will involve:

- Placing and compacting of hardcore sub-base;
- Casting of concrete kerbs and footpaths;
- Laying of road surfacing;
- Installation of paving;
- Placing of furniture and fittings.

8 OUTLINE CONSTRUCTION PROGRAMME

8.1 Overview

It is envisaged that construction works would commence in early summer 2024 with a completion date of summer 2027, subject to successful grant of planning, completion of detailed design and tendering prior to spring 2024.

NOTICE

This document represents the findings from a Waste Soil Classification (WSC) exercise conducted at the above referenced site. Best practice was followed at all times and within the limitations stated. This document has been produced by O'Connor Sutton Cronin & Associates for Dublin City Council. It may not be used for any purpose other than that specified by any other person without the written permission of the authors.

1. INTRODUCTION

1.1. Project Contractual Basis & Parties Involved

This report has been prepared by O'Connor Sutton Cronin & Associates Ltd. (OCSC) at the request of their Client, Dublin City Council (DCC) as part of the Civil and Structural Engineering Scope of services for the proposed development. The site for assessment is at Emmet Road in Inchicore, Dublin 8 and currently comprises of a vacant grass field (demolished former residential estate), a former halting site, a recreational club building, an employment building centre and a health community centre.

The field assessment and reporting was undertaken by Kate Santos, Environmental Engineer with OCSC and Richard Thompson, Chartered Geologist (EuroGeo and PGeo) and Member of the Institute of Geologists of Ireland (MIGI) with OCSC and approved by Eleanor Burke, Chartered Scientist (CSci) and Member of the Institution of Environmental Sciences (MIEnvSc) who is the Environmental Division Manager of OCSC.

1.2. Background Information

The site is located in Inchicore adjacent to various recreational, retail, residential and commercial facilities (refer to Figure 1.1). The site area extends across c. 3.8 hectares of land and is bounded by Emmet Road (R810) to the North, by Patriots Path and St Michael's Estate Road to the East, by a protected stone boundary wall and Goldenbridge Cemetery to the south, and to the west by St Vincent's Street West.

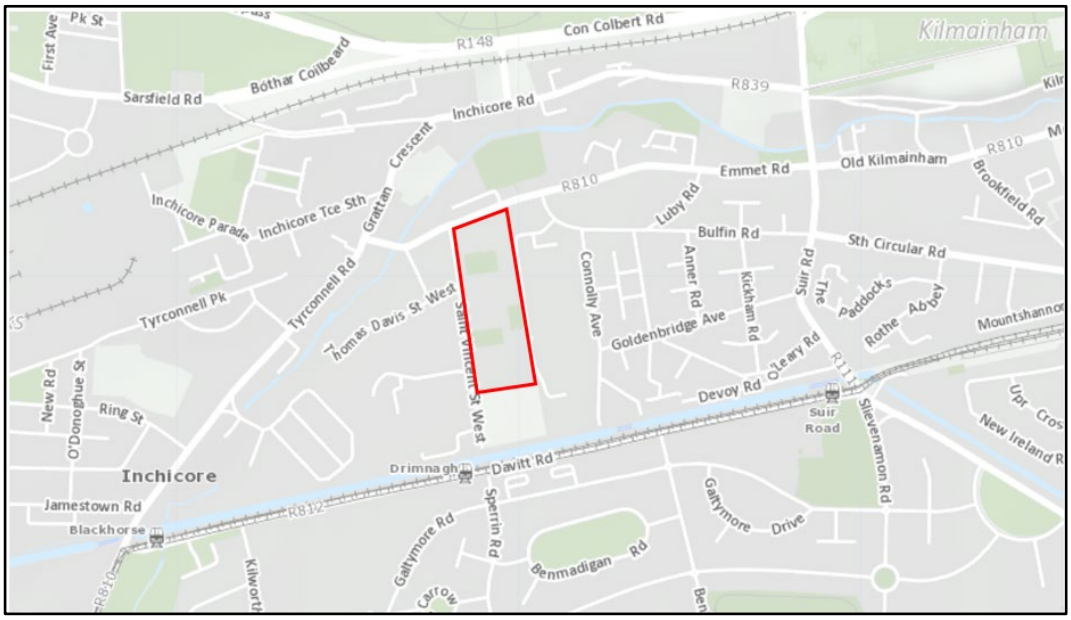

Figure 1.1: Site Location (approximate site boundary in red. Source: OSI, 2020)

The north section of the site comprises existing recreational, social and community facilities with associated landscaping and car parking. The middle and southern area of the site consists of a grass field, the location of the former St. Michaels Estate (Dublin City Council Social Housing) which has been demolished.

The Inchicore Community Sports Centre and the St. Michael's Parish Community Centre are accessed by St Michael's Estate Road, the Celtic Pigeon Club (demolished in November 2020) by St Vincent's Street West, and EVE Tuiscint Health Centre by Emmet Road. The open grassed area is accessed by pedestrian paths from St Michael's Estate Road and St Vincent's Street West.

The site is relatively flat with a fall from south to north of approximately 6m. The topographic map is included in Appendix B. The centre of the site is at Ordnance Survey of Ireland (OSI) ITM reference 712063E, 733325N.

Figure 1.2: Aerial Image of the site (Source: Google Earth)

1.3. Proposed Development

The site is located in Inchicore adjacent to various recreational, retail, residential and commercial facilities. The proposed development includes a mixed used development of approximate 484No. duplex and apartment units in addition to commercial, retail and community facilities and associated infrastructure, including roads, footpaths, services and landscaping.

The middle and southern area of the site consists of the former St. Michaels Estate (Dublin City Council Social Housing) which has been demolished and exists now as open space. The north section of the site comprises a partially demolished building, a former halting site as well as active recreational, social and community facilities with associated landscaping and car parking. A number of structures will be demolished to make way for the proposed development including St. Michaels Community

Centre, EVE Tuiscint Health Centre and the Celtic Pigeon Club (demolished in November 2020). The Inchicore Community Sports Centre will be retained, refurbished and incorporated into the proposed scheme. There are a number of options being considered regarding the layout of the redevelopment; proposed plans are included in Appendix A.

1.4. Project Objectives

The overall project objectives include:

- Provide environmental information on the site including its environmental setting, past activities and current soil quality in terms of contamination; and
- Classify the waste deposited on site in terms of (inert, non-hazardous or hazardous, assess total pollutant content data via HazWasteOnline software, assess leachate data against Irish Landfill Acceptance Criteria and to characterise the material in terms of the physical and chemical components as per the EPA List of Waste

1.5. Methodology and Approach

The methodology and approach for the proposed work will follow:

- BS 10175:2011+A2:2017, Investigation of potentially contaminated sites, Code of Practice;
- EPA, 2020, Guidance on waste acceptance criteria at authorised soil recovery facilities;
- EPA, 2015, Waste Classification, List of Waste & Determining if Waste is Hazardous or Non-hazardous;
- EPA 2013, Guidance on the Management of Contaminated Land and Groundwater at EPA Licensed Sites;
- EPA 2007, Code of Practice, Environmental Risk Assessment for Unregulated Waste Disposal Sites;
- EA, 2015, Guidance on the classification and assessment of waste, Technical Guidance WM3;
- EA, 2004, Model Procedures for the Management of Land Contamination (CLR11);
- Environment Agency (2004) Model Procedures for the Management of Land Contamination. Contaminated Land Report 11; and
- DoELG, EPA and GSI, 1999. Groundwater Protection Schemes. Department of Environment and Local Government, Environmental Protection Agency and Geological Survey of Ireland, Dublin, Ireland.

1.6. Scope of Works

To meet the project objectives the following scope of works were completed:

- Undertake and record a site visit and walkover including reference to readily available local information; specifically obtaining information regarding storage of deleterious materials or potential contamination related to historical operations on site;
- Obtain, where possible, records of past spillages which could potentially have impacted upon the soil and/or groundwater, and any environmental reports on the site's historic operations and condition;
- Undertake and present a historical site and area review, primarily referring to old Ordnance Survey Ireland (OSI) Maps but utilising other sources as appropriate and readily available including previous site investigations and data available;
- Present a discussion of the current site status and key environmental influences around the site;
- Complete an updated Site Investigation to inform the Waste Soil Classification exercise;
- Review of analytical data of soil sampled on-site at selected locations;
- Complete a Waste Soil Classification exercise.
- Document the Waste Soil Classification in terms of a report and bulk dig plans.

1.7. Limitations

This Waste Soil Classification (WSC) Report has been prepared for the sole use of Dublin City Council ("the Client"). No other warranty, expressed or implied, is made as to the professional advice included in this report or any other services provided by OCSC. This Report is confidential and may not be disclosed by the Client nor relied upon by any other party without the prior and express written agreement of OCSC.

This assessment is based on results from a site investigation undertaken in October 2020, a review of available historical information, environmental records, consultations, relevant information and reports from third parties. All information received has been taken in good faith as being true and representative. There was lack of accessibility to a former halting site area, located directly east adjacent to the former Pigeon Club building.

This report has been prepared in line with best industry standards. The methodology adopted and the sources of information used by OCSC in providing its services are outlined in this Report. The scope of this Report and the services are accordingly factually limited by these circumstances.

OCSC disclaim any undertaking or obligation to advise any person of any change in any matter affecting the Report, which may come or be brought to OCSC's attention after the date of the Report.

The conclusions presented in this report represent OCSC's best professional judgement based on review of the relevant information available at the time of writing. The opinions and conclusions presented are valid only to the extent that the information provided was accurate and complete.

2. ENVIRONMENTAL SITE SETTING

2.1. Site Location

The site location is in Inchicore, Dublin 8 and comprises of a vacant grass field (former St. Michaels Estate), a former halting site, and four existing buildings.

The regional site location is illustrated on Figure 2.1 by the red star.

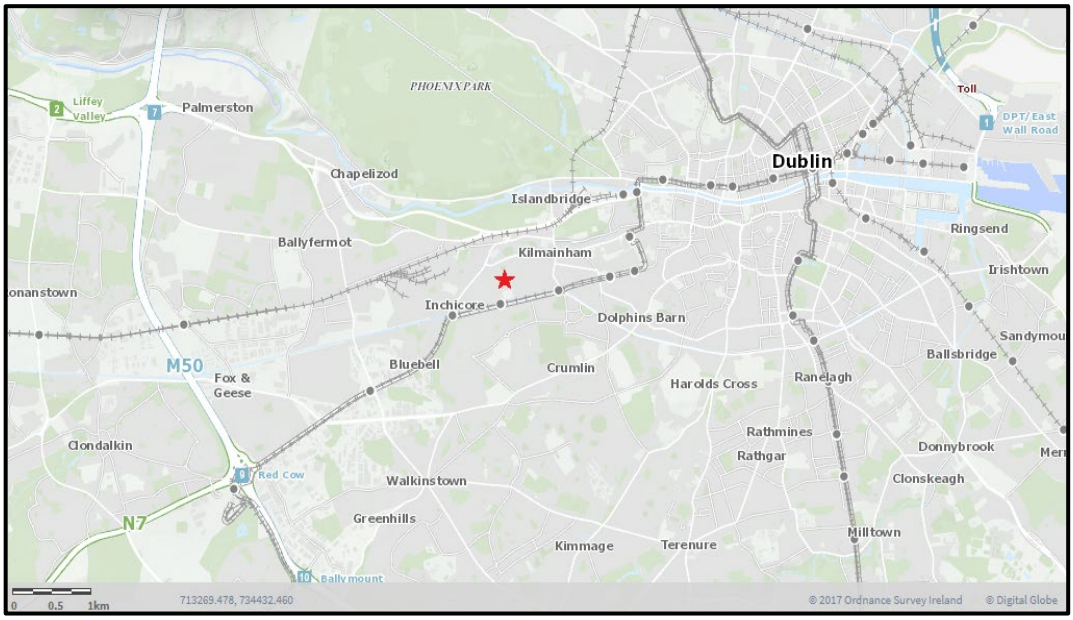

Figure 2.1 Regional Site Location (approximate site location indicated by red star. Source: OSI, 2020)

2.2. Surrounding Land Use

The surrounding area is residential with a mixture of residential, recreational and commercial/retail buildings.

North of the site is Emmet Road (R810), residential and commercial structures, Grattan Crescent Park and Richmond Park. East of the site is Patriots Path, St Michael's Estate Road, Saint Michael`s Church, Bulfin Court Day Centre, residential buildings, Inchicore Primary Care Centre and Richmond Barracks Cultural Centre with associated gardens and a vacant site. Further east is residential. South of the site is Goldenbridge Cemetery and the Common Ground Art building. Further south is the Grand Canal, the Luas Line transport link (red line), Davitt Road (R812) and residential buildings. West of the site is St. Vincent Street West, residential buildings, commercial businesses and retail outlets.

Refer to Figure 1.2 in Section 1 for an aerial photograph of the site. The adjacent land uses are listed in Table 2.1 below.

Table 2.1 – Adjacent Land Uses

BOUNDARY	LAND USE
North	Emmet Road (R810), residential and commercial structures, Grattan Crescent Park and Richmond Park.
East	Patriots Path, St Michael's Estate Road, Saint Michael`s Church, Bulfin Court Day Centre, residential buildings, Inchicore Primary Care Centre, Richmond Barracks Cultural Centre with associated gardens, a vacant site.
South	Goldenbridge Cemetery, Common Ground Art building, The Grand Canal, The Luas line transport link (red line), Davitt Road (812), residential buildings.
West	St Vincent Street West, residential buildings, commercial and retail businesses.

2.3. Site History

An understanding of the site history was gained by undertaking a review of the following primary sources including:

- Review of available extracts of historical Ordnance Survey of Ireland (OSI) maps at http://map.geohive.ie/mapviewer.html;
- Review of information held by the Environmental Protection Agency (EPA) EnVision online Mapping;
- Aerial images available of the site (OSI, Google Earth and Google Maps);
- Geological Survey of Ireland (GSI) online map tool at https://dcenr.maps.arcgis.com/apps/MapSeries/index.html;
- National Parks and Wildlife Service online map tool; and
- Richmond Barracks history website at http://www.richmondbarracks.ie/history/keogh-square/.

2.4. Site Development

The following section outlines the historically mapped features in the immediate environs of the site.

The 6" historical map dated 1837-1842 shows the site as part of the western portion of the Richmond Barracks, a military complex inside the Goldenbridge North Townland. The site is comprised of building structures along the perimeter of the site with an open area in the centre.

To the east boundary of the site is the remaining eastern portion of Richmond Barracks military camp buildings, vacant lots, the Maria Mount, the Rosetta Cottage, the Art Mount and Harcourt Lodge.

To the north of the site is a roadway, a vacant lot and the Susan Vale's Lake connected to an unnamed river. The roadway heads from southwest to northeast and connects to an avenue to the west. The avenue runs from the southwest to the northeast.

To the south of the site is a cemetery with a R.C. Chapel, a Guard House, and Grand Canal. To the southeast of the site was an extension of the military camp area and, the Mount Shannon Mills on the south border of to the canal.

To the west of the site was an area of building structures, agricultural areas, a weir, vacant lots and a roadway. The structures include Richmond Spa, the Meeting House, the Infant School, the Spa Cottage, the Richmond Cottage, the Goldenbridge House and the Paper Mill.

Figure 2.2. Approximate site boundary indicated by red line on a 6 inch historical map dated 1837-1842 (Source: OSI, 2020).

The 25" historical map (1888-1913) (Figure 2.3) shows the site area occupied by the military structure of Richmond Barracks with additional buildings along the northern and southern sections of the site, including a Church in the northeast.

The main road on the north boundary was identified as Emmet Road. A tramway, Post Office and a Church are depicted north of the site. The Susan Vale's lake on the north was converted in a Mill Pond, and the river connected to the lake was then identified as Cammock River.

East of the site is depicted with additional buildings to the Richmond and Barracks military camp. South of the site are additional buildings close to the Mount Shannon Mills. West of the site is depicted with building developments, including Tramway

Depot, St. Vincent's Industrial School, St. Josephs Industrial School, Convent School, Christian Brothers School and St. Vincent's R.C. Church.

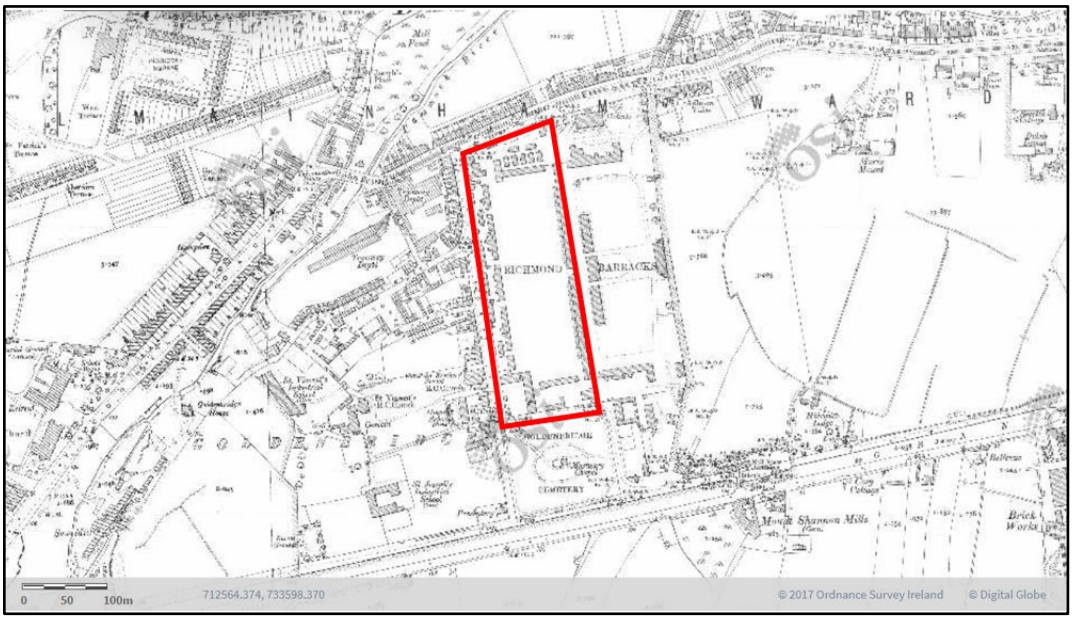

Figure 2.3. Approximate boundary of the subject site indicated by a red line on historic 25 inch map (1888-1913) (Source: OSI, 2020)

The 6" Cassini historical map (Figure 2.4) identifies a change to the layout of Richmond Barracks which appears to have been divided and converted into residential buildings and a school.

The site is occupied by Keogh Square and a main building block (residential) in the centre surrounding by other (residential) structures. Dispy and an unidentified building were depicted in the northern section of the site and residential buildings and Bulfin Street were depicted in the southern section of the site.

The surrounding general area is depicted with residential developments and additional building structures. Richmond Park is depicted north of the site. A school, residential structures, Connolly and Goldenbridge Avenues depicted east of the site. A Paint and Varnish Factory is depicted circa 150 meters to the south side of the Grand Canal. A Chassis Works, Omnibus Works and Saw Mills are depicted approximately 40 m, 150 m and 320 m to the west of the site, respectively.

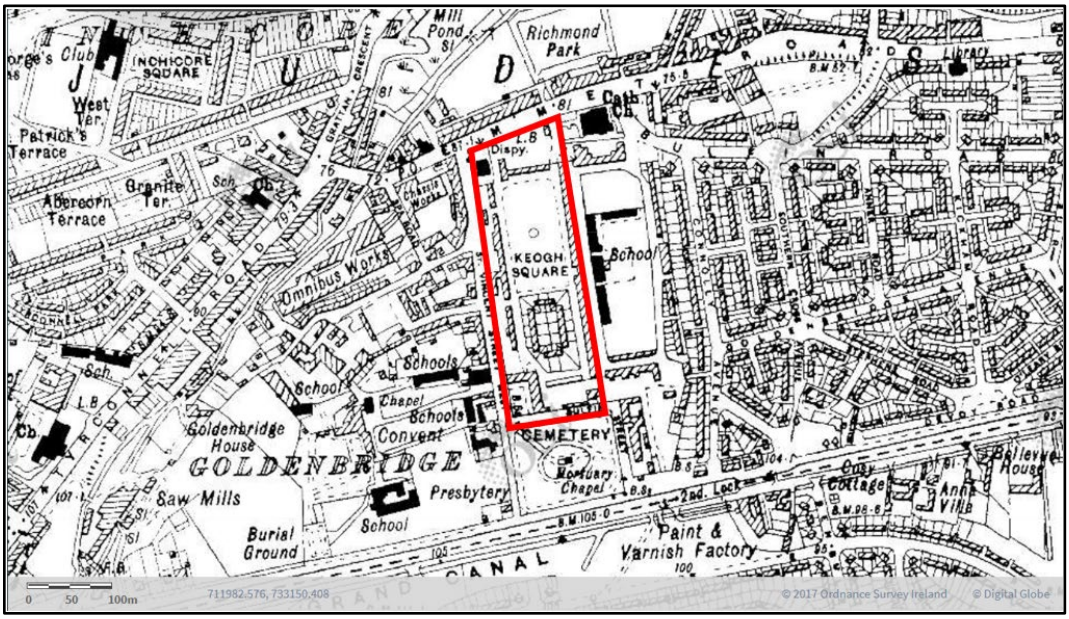

Figure 2.4. Approximate site boundary indicated by red line on a 6 inch Cassini map (1830 - 1930). (Source: OSI, 2020)

From a review of the Ordnance Survey Ireland aerial images, the earliest 1995 aerial image (see figure 2.5) and 2000 aerial image (refer to figure 2.6) show the site area has undergone many changes when compared with the 6" Cassini historical map (Figure 2.4). Keogh Square and related structures on the site gave way to St Michael's council estate (residential), which consisted of seven apartments/flat complex buildings separated by open areas within site. The north section of the site was occupied by playing yards, a halting site east adjacent to the Pigeon Club and three building structures.

North of the site, Susan Vale's Lake was converted into an open green area. East of the site, replacing the old school depicted in the 6 Inch Cassini Map, residential structures were built, Richmond Barracks Museum, and Hollybrook Lodge Residential Units (hospital care). Additional buildings are depicted south and west of the site.

Figure 2.5. Approximate boundary of the subject site indicated by a red line on historic 25 inch map (1995) (Source: OSI, 2020)

Figure 2.6. Approximate boundary of the subject site indicated by a red line on the 2000 aerial image (Source: OSI, 2020)

The aerial images dated 2005 - 2012 (refer to Figure 2.7) shows that three of the seven buildings of the St Michaels Estate were demolished at the time of the images.

Development of residential housings is depicted at Bulfin Court. The residential properties which bound the barracks to the south had undergone demolition post-dating 2000.

Figure 2.7. Approximate boundary of the subject site indicated by a red line on the 2005-2012 aerial image (Source: OSI, 2020)

Analysis of aerial images from 2013 – 2018 (refer to Figure 2.8) shows the site in its current form with the St. Michaels estate fully demolished thereby leaving open space which remains now as a grass field. On the north of the site, the Inchicore Community Sports Centre was built, one of the northern buildings was partially demolished and the other three buildings remain similar to what they were in the aerial images dated 2005 - 2012 (refer to Figure 1.2). The halting site is depicted as demolished.

Figure 2.8. Approximate boundary of the site indicated by a red line on the 2013-2018 aerial image (Source: OSI, 2020)

2.5. Site Physical Setting

Information regarding the site topography, hydrology, geology, hydrogeology and ecology of the area has been obtained from records held by the Geological Survey of Ireland (GSI), Environmental Protection Agency (EPA) Envision online mapping tool, Ordnance Survey of Ireland (OSI), Water Framework Directive Maps and National Parks and Wildlife Service (NPWS) databases.

2.5.1. Topography

The topography of the site varies from 28.70mAOD in the southwest corner to 22.81mAOD in the northern end.

Contour lines decrease from southwest to northeast. Land Survey and Elevation maps for existing and nearby buildings and for adjacent streets are in Appendix B.

2.5.2. Area of Geological Interest

GSI online mapping service was consulted regarding areas of geological interest in the area of the site. The nearest area of geological heritage is the Phoenix Park (site code DC009) which is located approximately 0.9 km north of the site. The site comprises an extensive natural landscape scanning out over an area of 707 hectares (ha). The site is designated due to the complexity of the native glacial sediments. Refer to Figure 2.9 from the GSI online mapping for further information.

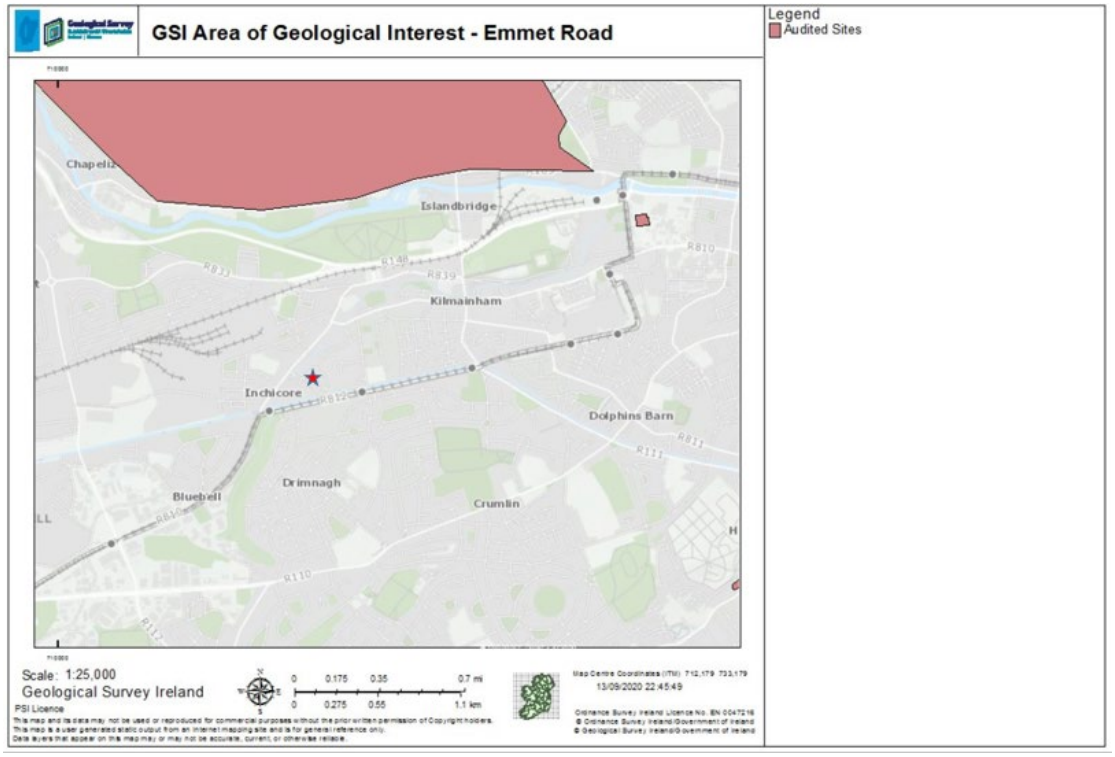

Figure 2.9 Area of Geological Interest (Approximate site location indicated by the red star) (Source: GSI, 2020)

2.5.3. Unconsolidated Geology

The topsoil beneath the site and the immediately surrounding area have been classified as Made ground. Refer to Figure 2.10 from the GSI online mapping for further information.

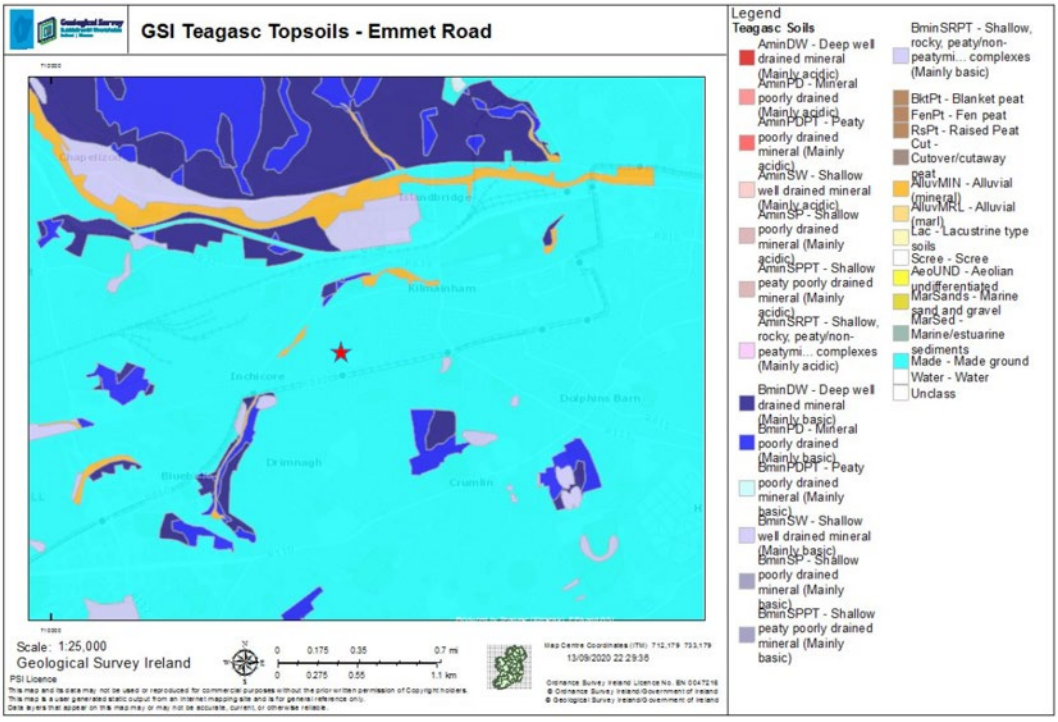

Figure 2.10. Teagasc Topsoils (Approximate site location indicated by the red star) (Source: GSI, 2020)

2.5.4. Unconsolidated Geology

The Quaternary geology of Ireland – Sediments Map is a representation of the surficial geology of Ireland at a scale of 1 to 50,000. The map shows the sediments mapped within 1 metre of the surface which were laid down during the quaternary, bedrock at or close to the surface water bodies or made ground. Quaternary sediments are categorised according to their genesis. The main types of sediment recognised are tills, (glacio) fluvio/lacustrine deposits, alluvium, lacustrine sediments and peat. Bedrock and karstified bedrock at or close to the surface are also mapped out as separate units." The Quaternary sediments have been described beneath the site as `tills derived from limestones`. Refer to Figure 2.11.

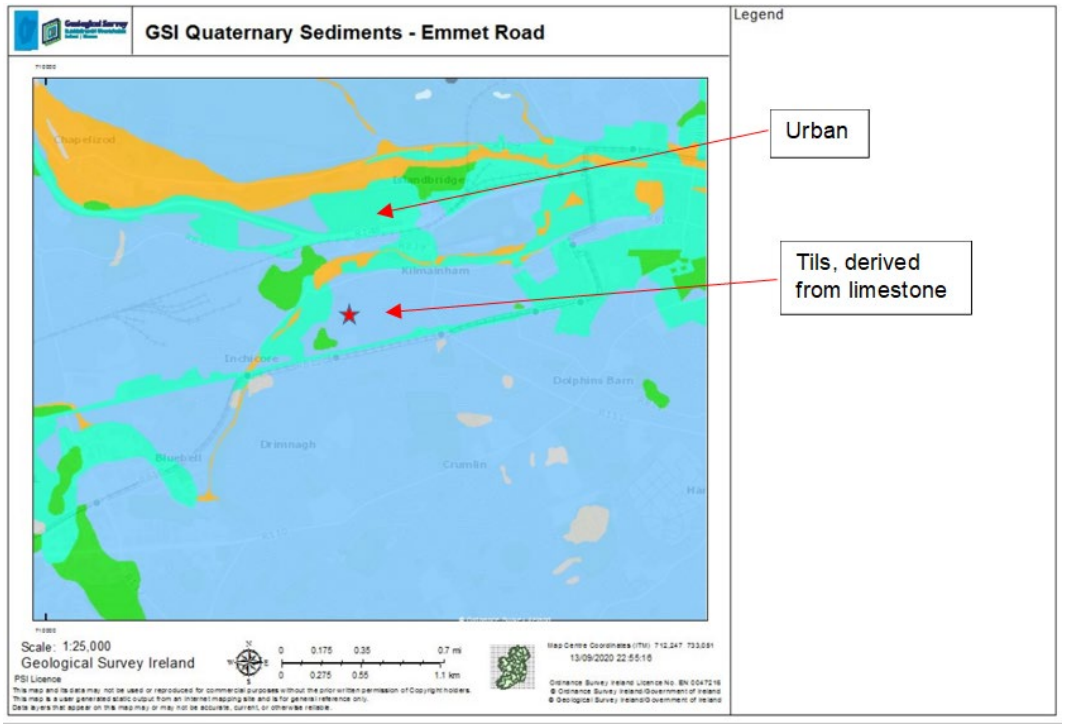

Figure 2.11 Quaternary Sediments (approximate site location indicated by red star)

2.5.5. Geology

The bedrock beneath the site area consists of the Carboniferous Lucan Formation, which is dark limestones and shale. "The formation comprises dark-grey to black, fine-grained, occasionally cherty, micritic limestones that weather paler, usually to pale grey. There are rare dark coarser grained calcarenitic limestones, sometimes graded, and interbedded dark-grey calcar" (GSI). The local geology mapped by the GSI is illustrated on Figure 2.12.

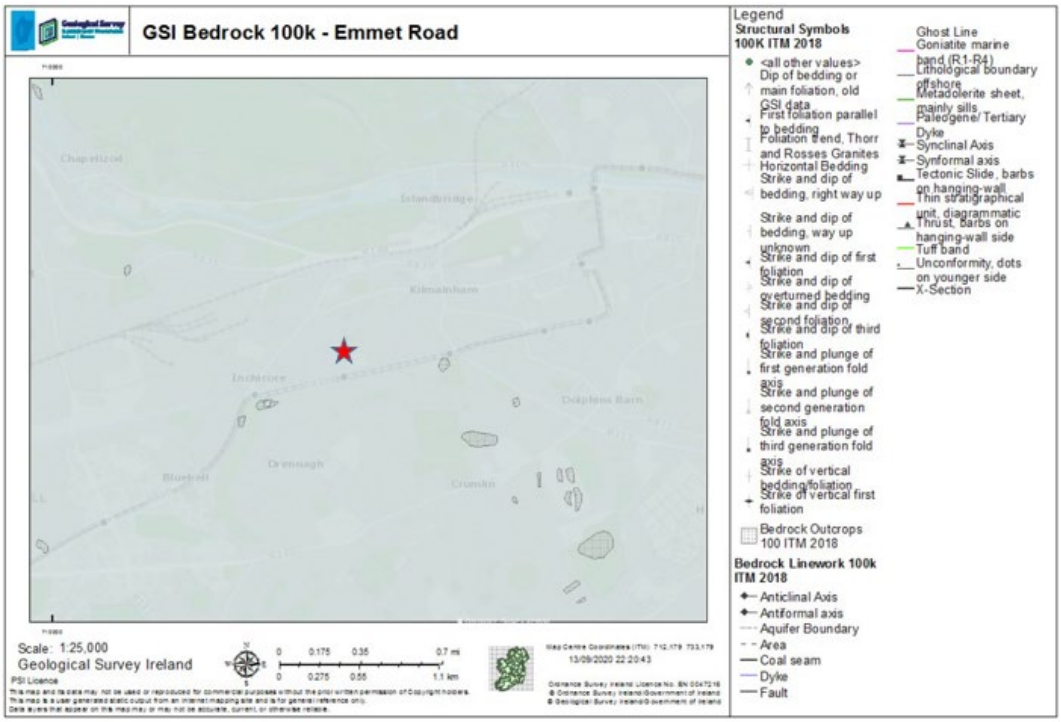

Figure 2.12. Bedrock 100K (Approximate site location indicated by the red star) (Source: GSI, 2020)

2.5.6.Aquifers

The GSI provides a methodology for aquifer classification based on resource value (Regionally Important, Locally Important and Poor) and vulnerability (Extreme, High, Moderate or Low). Resource value refers to the scale and production potential of the aquifer whilst vulnerability refers to the ease with which groundwater may be contaminated by human activities (vulnerability classification primarily based on the permeability and thickness of subsoils).

The site is underlain by a LI - locally important aquifer which spans out/covers an area of 1,309 km^2. The bedrock Aquifer is moderately productive only in local zones. (Refer to Figure 2.13).

The limestone is part of the Dublin Urban Ground Water Body (GWB) which is described as poorly productive. The GWB covers an area of 837km^2 over the Dublin area and towards Kildare. The GSI Summary Characteristics of the Dublin GWB identify that the transmissivity of these rock units are likely to be low (1-10m^2/d).

Most flow in this aquifer will occur near the surface in fractures. In general, the effective thickness of this aquifer is likely to be about 10 m, comprising a weathered zone of a few metres and a connected fractured zone below this. However, deep water strikes are commonly found in more isolated faults/ fractures at depths of 30 – 50 mbGL. Flow path lengths are not considered to be on a regional scale and are typically less than 1km in length.

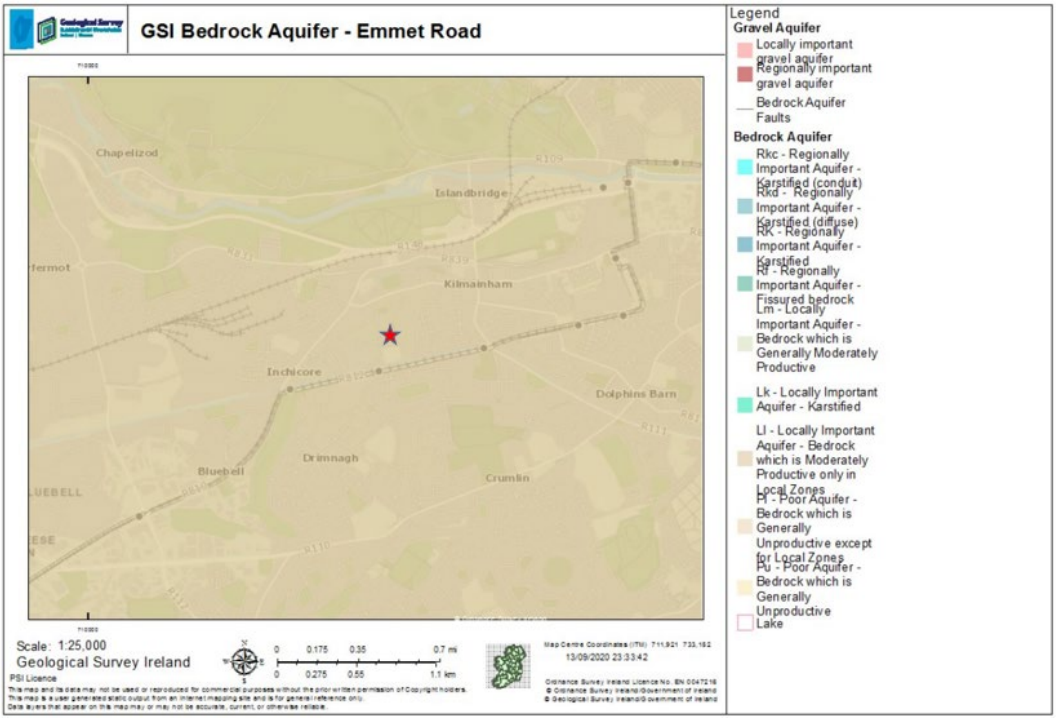

Figure 2.13 Aquifers (Approximate site location indicated by the red star) (Source: GSI, 2020)

2.5.7. Aquifer Vulnerability

The groundwater vulnerability beneath the site is ***High*** and there are localized ***Extreme*** zones within 0.6 km southeast and southwest of the site, refer to Figure 2.14 (GSI). Vulnerability ratings are related to a function of overburden thickness and permeability which might offer a degree of protection and/or attenuation to the underlying aquifer from surface activities and pollution.

There were no karst features identified adjacent to the site.

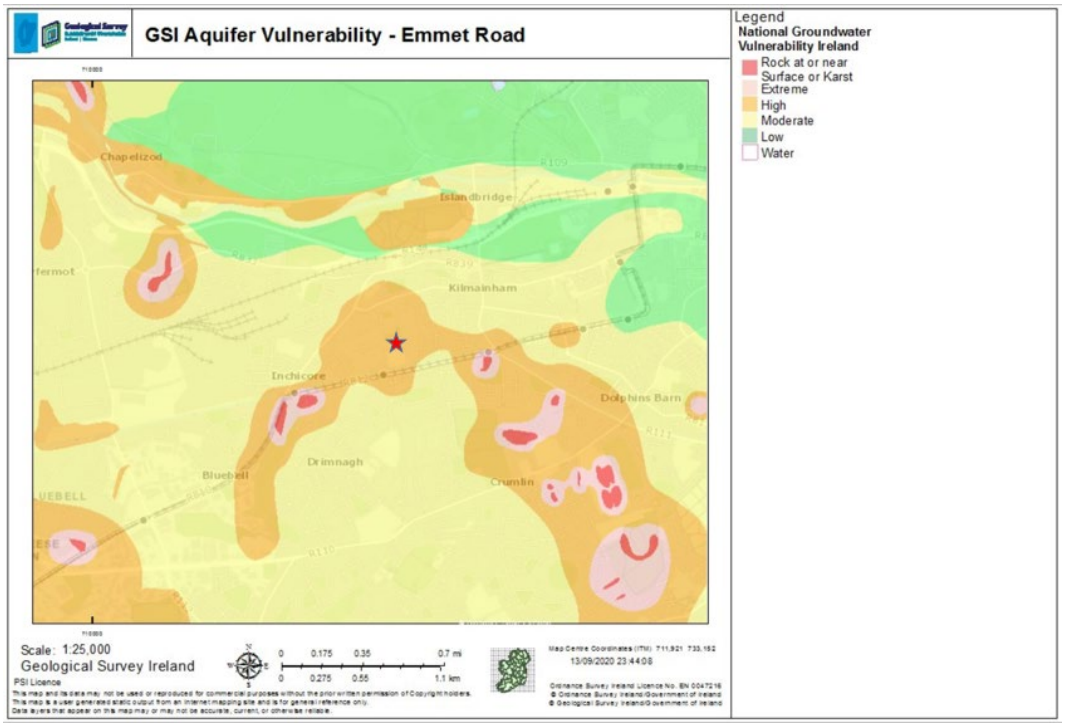

Figure 2.14 Groundwater Vulnerability (Approximate site location indicated by the red star) (Source: GSI, 2020)

2.5.8. Groundwater Status

An assessment carried out under the Water Framework Directive (WFD) 2013-2018 groundwater body (EPA, 2020) has concluded that the groundwater within the bedrock aquifer is presently of 'Good Status'. Accordingly, the objective is to protect the "Good Status" by recognizing that the quality of groundwater is at risk due to point and diffuse sources of pollution. Refer to figure 2.15.

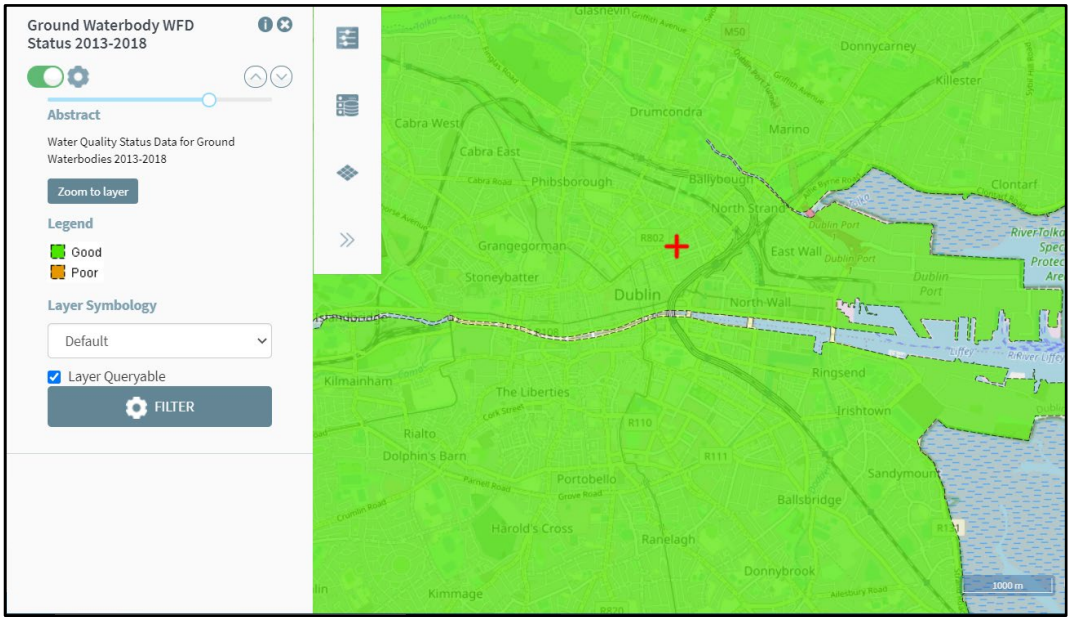

Figure 2.15 WFD Status 2013-2018 (Approximate site location indicated by the red cross star) (Source: EPA maps, 2020)

According to the Water Framework Directive Classification Scheme, the WFD Risk Scoring System has identified a groundwater water body risk status of 'Not at risk' of deteriorating or being at less than Good status in the future for the Dublin bedrock aquifer (see Figure 2.16).

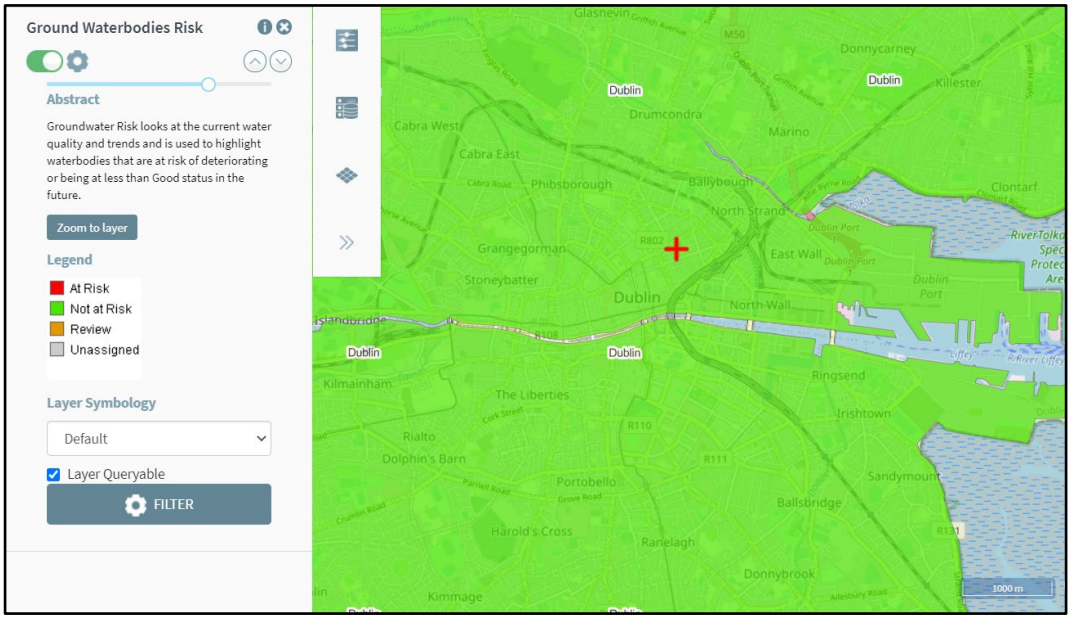

Figure 2.16 WFD Risk Status (Approximate site location indicated by the red cross) (Source: EPA maps, 2020)

2.5.9. Groundwater Recharge

Diffuse recharge generally occurs via rainfall percolating through the subsoil and reaching the aquifer. Recharge is higher in areas where the subsoil is thinner and/or more permeable. The proportion of the effective rainfall that recharges the aquifer is largely determined by the thickness and permeability of the soil and subsoil, and by the slope.

The GSI's groundwater recharge model parameters for the site are summarised in Table 2.2. Figure 2.17 contains a drawing from the GSI indicating the recharge zone. This does not account for leakage to ground from water supply, storm drains and sewers.

The site lies above part of the Dublin Groundwater Body (GWB) described by GSI Summary as mostly Locally Important (LI) aquifer, which is moderately productive only in local zones. The GWB covers an area of 1,309 km2 under the Dublin area and areas southwest.

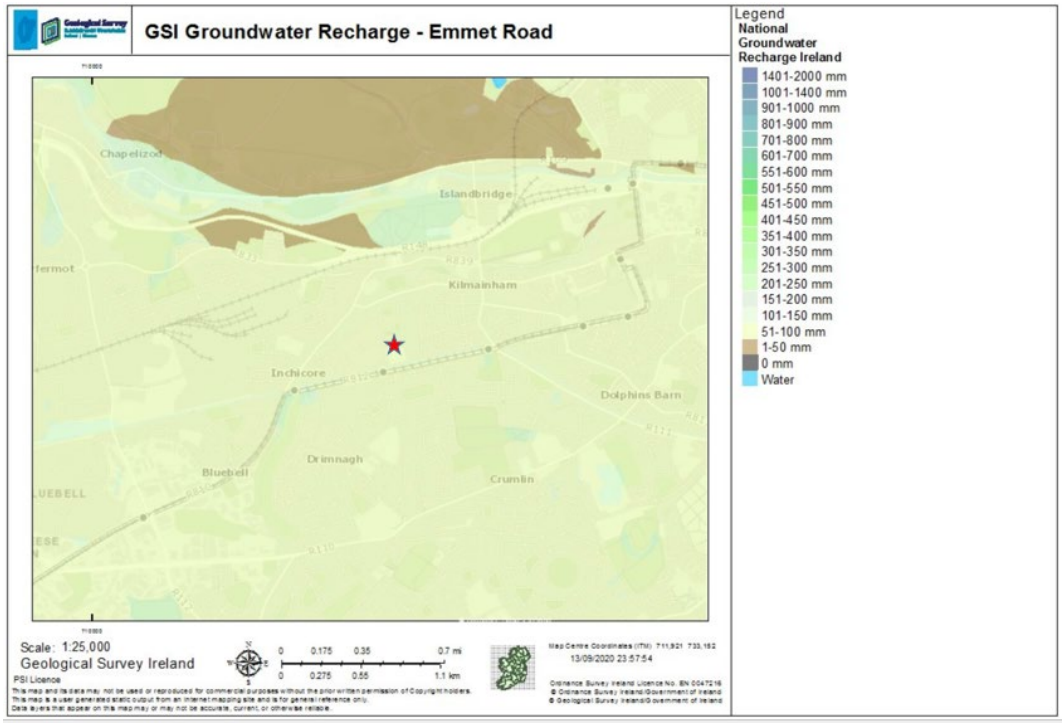

Figure 2.17 Groundwater Recharge (Approximate site location indicated by the red star) (Source: GSI, 2020)

Table 2.2 GSI Groundwater Recharge Parameters

Groundwater Recharge Parameters	
Average Recharge (mm/yr):	70
Hydrogeological Setting Description:	Made ground
Soil Drainage:	MADE
Subsoil Type:	Made
Subsoil Description:	Made ground
Subsoil Permeability:	L
Subsoil Permeability Description:	Low
GW Vulnerability:	H
GW Vulnerability Description:	High
Aquifer Category:	LI
Aquifer Category Description:	Locally important aquifer- Bedrock which is moderately productive only in local zones
Recharge Coefficient (%):	20
Maximum Recharge Capacity (mm/yr):	200
Effective Rainfall (mm/yr):	350

2.5.10. Wells & Springs

A search of the GSI groundwater well database was conducted to identify registered wells in the surrounding area. The well in closest proximity to the site is located approximately 1.3 km to the south/southeast of the site in Drimnagh, Dublin 12. It was drilled on 4th January 1996. The depth of this well is 3.3 m and the purpose of this well remains unknown. The second nearest is a borehole drilled on 1st August 1949 with 41.1 meters depth for industrial use.

The GSI (1999) also provides a framework for the protection of groundwater source zones (e.g. areas of contribution to water supply bores). There are no reported source protection zones (SPZs) within a 20km radius of the site.

Mapped wells and springs in the general vicinity of the site identified by the GSI are illustrated on Figure 2.18.

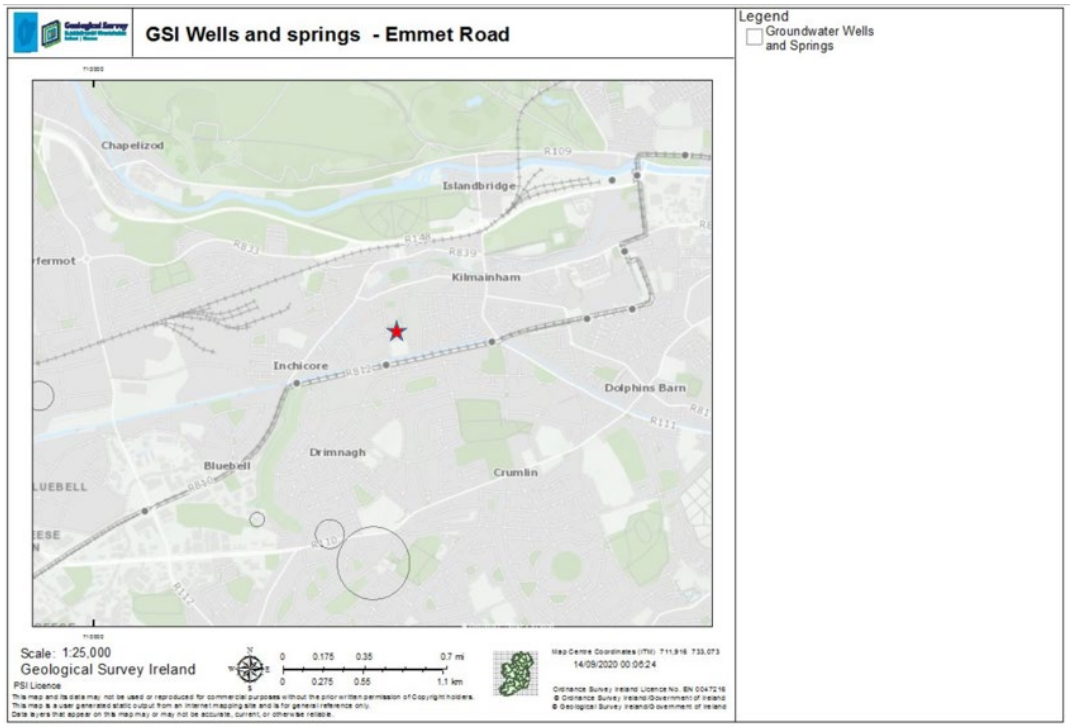

Figure 2.18 Wells and springs (Approximate site location indicated by the red star) (Source: GSI, 2020)

2.5.11. Hydrology

The Grand Canal, at its closest point, is located approximately 0.11 km south of the site and flows in a west to east direction. The status of the Grand Canal has been designated as 'Good'. The Camac River is approximately 0.07 km northwest of the sites boundary (NW), and has been given a 'Poor' WFD. The River Liffey is found c. 0.65 km directly north of the site and has been identified as a river waterbody with a 'Moderate' status, according to the WFD scoring system. Refer to Figure 2.19.

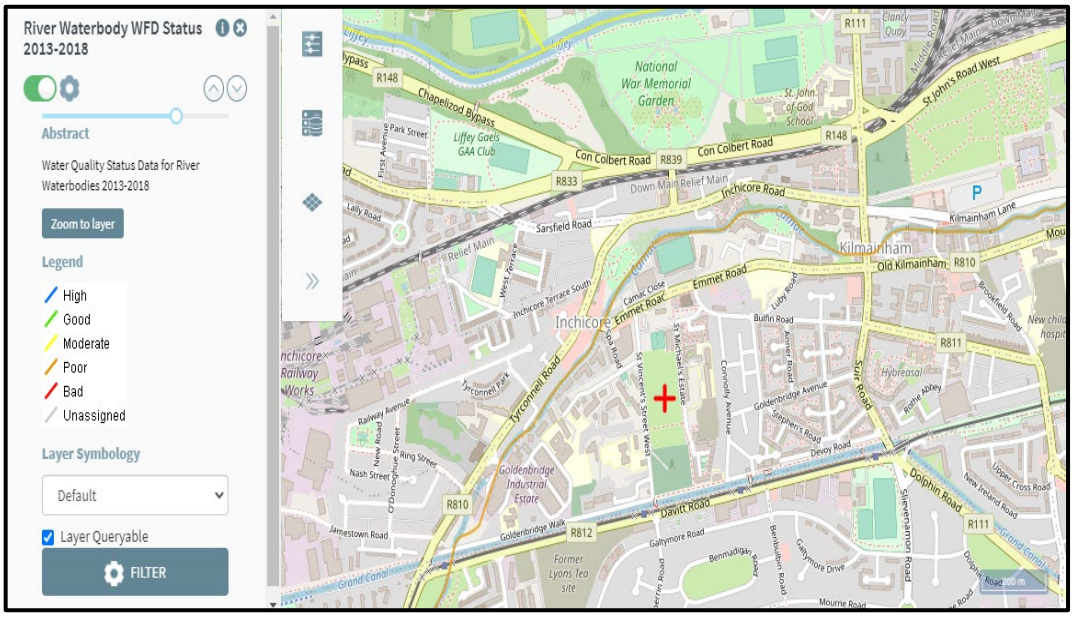

Figure 2.19 River Waterbody Status 2013-2018 (Approximate site location indicated by the red star) (Source: EPA, 2020)

The status of the Grand Canal has been designated as 'Not at Risk' under the WFD (EPA, 2013-2018). Conversely, the Camac River and River Liffey are both identified as 'At Risk' river waterbodies on the River Risk scoring system. Refer to Figure 2.20.

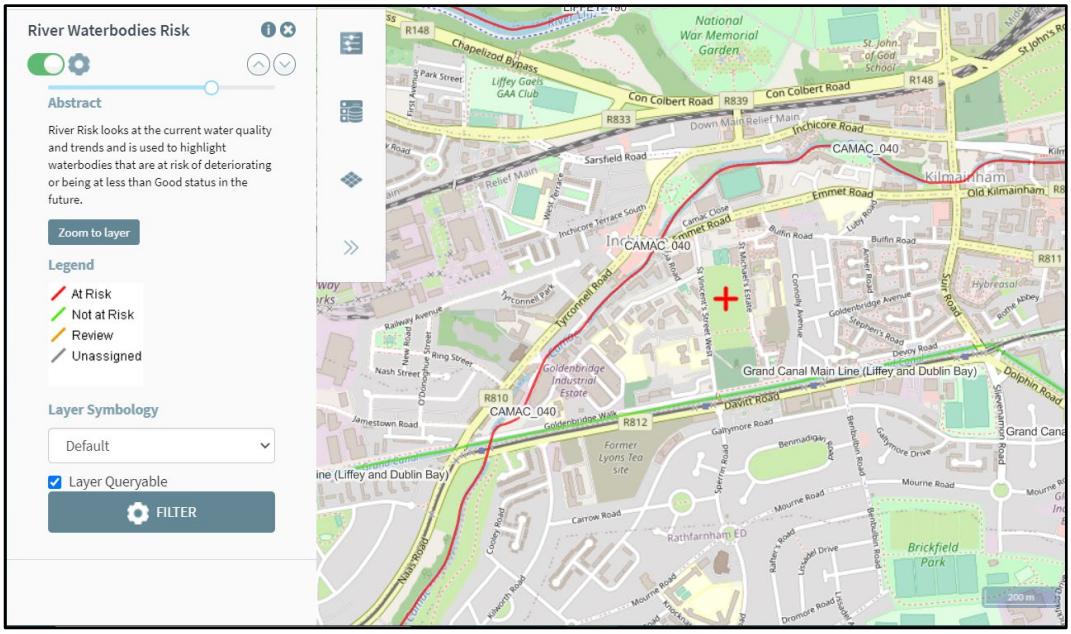

Figure 2.20 WFD Risk score 2013- 2018 (Approximate site location indicated by the red star)(Source: EPA, 2020)

2.5.12. Radon

According to the EPA (now incorporating the Radiological Protection Institute of Ireland) between one and five percent of the homes in this 10 km^2 grid square are estimated to be above the Reference Level of 200 Bq/m^3. This is considered a low-medium ranking score. Refer to Figure 2.21.

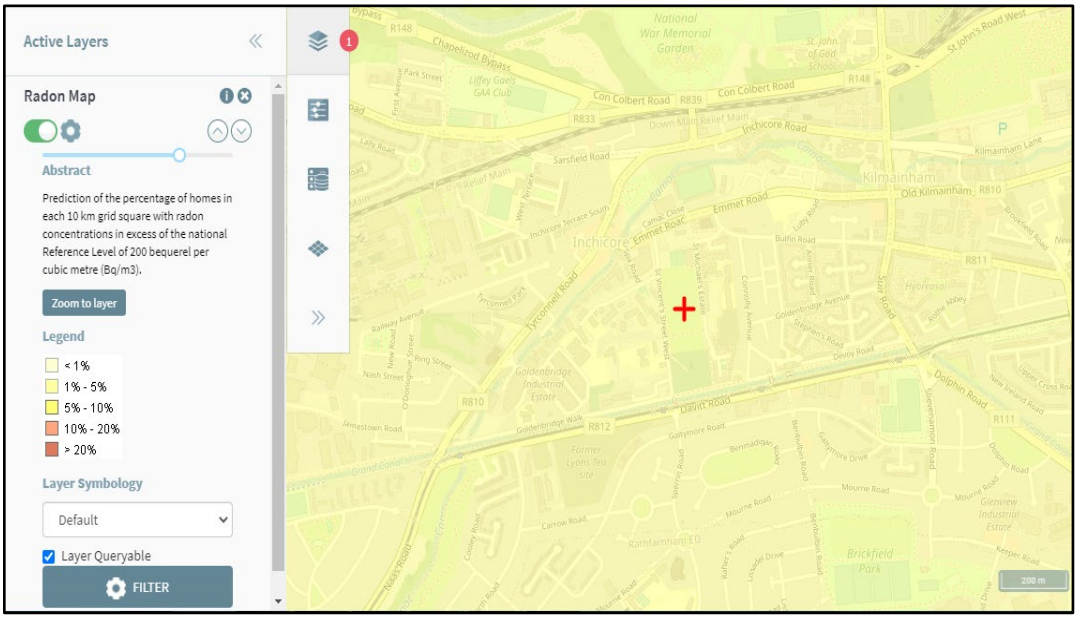

Figure 2.21 Radon Map (EPA, 2019) (Approximate site location indicated by the red star)(Source: EPA, 2020)

2.5.13. Designated Area of Conservation

The nearest European designated site is South Dublin Bay and River Tolka Estuary Special Protection Area, (SPA) and is 6.3km northeast of the site. The SPA site code for this is feature is 004024. The nearest designated area of conservation is the Grand Canal located ca.100 meters to the south of the site (refer to figure 2.22). The Proposed Natural Heritage Area (pNHA) site code for this feature is 002104.

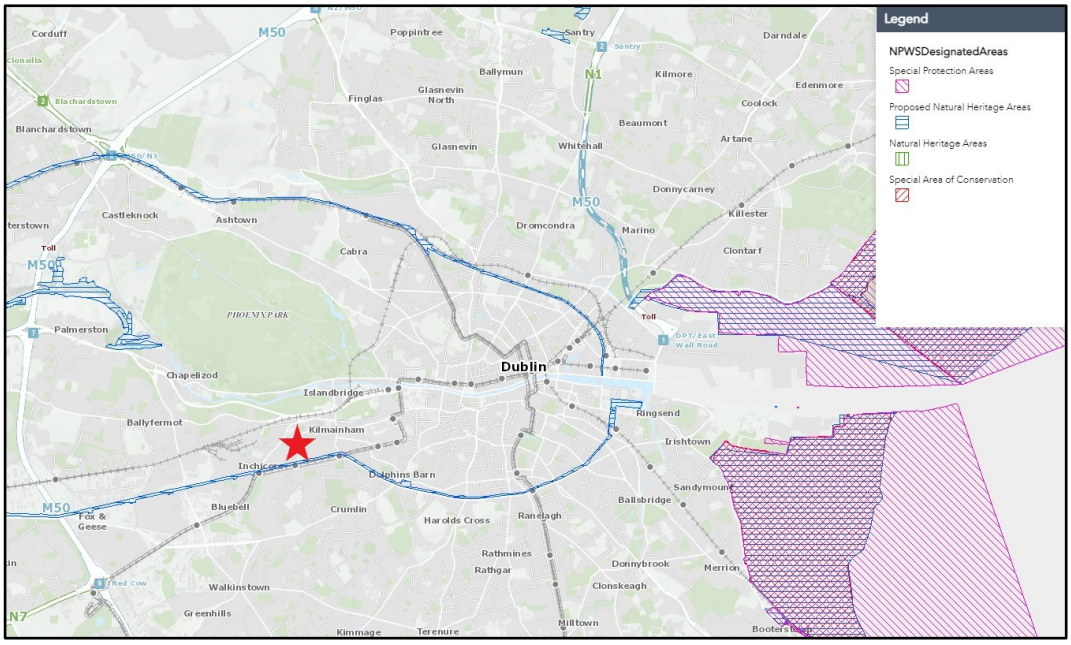

Figure 2.22 NPWS Designated Area (approximate site perimeter location indicated by red line)

2.5.14. Summary of the Physical Site Setting

Summary of the site physical setting are outlined in Table 2.3.

Table 2.3 Summary Site Setting

FEATURE	DETAILS & COMMENTS
Topography	The site is relatively flat with a fall from south to north of approximately 6m.
Geology	**Topsoil and Subsoil:** Made ground and 'Urban'.
	Solid Geology: According to GSI data, the bedrock geology beneath the site is underlain by Carboniferous Lucan Formation comprising dark limestones and shales
Hydrogeology	**Aquifer Classification:** ***LI -*** Locally Important which is moderately productive only in for local zones
	Vulnerability & Recharge: The vulnerability has been classified as ***High***. The maximum recharge capacity has been modelled at 200 mm/year.
	Groundwater Flow: The regional bedrock groundwater flow direction is from the southwest to the north and east of the site.
	Well Search: There were no Source Protection Zones identified and therefore the assumption is that there are no public supply wells within a 20km zone. The nearest registered borehole is located approximately 1.4 km to the south/southeast of the site in Drimnagh. It was drilled on January 4th, 1996, to a depth of 3.3m. The function or purpose of this borehole remains unknown. The second nearest is a borehole drilled on August 1st 1949 with 41.1 meters depth for Industrial use.
Hydrology	**Surface Water Courses:** There are no surface watercourses on the site. The Grand Canal main line, the Camac river, and the River Liffey are 110m, 70m and 650m respectively, from the site. The WFD

	scoring is 'Good' for Grand Canal, 'Poor' for Camac and 'Moderate' for the Liffey. Grand Canal was designated 'Not at Risk'; River Liffey and River Camac are designated 'At Risk'.
Designated sites	The nearest European designated site is South Dublin Bay and River Tolka Estuary Special Protection Area, (SPA) and is 6.3km northeast of the site. The nearest designated area of conservation is the Grand Canal located ca.100 meters to the south of the site.

2.6. Site Walkover

OCSC undertook a site walkover survey at the site in October 2020. Photographs taken during the site investigation are included in Appendix C. The main observations of the survey are summarised below.

2.6.1. Infrastructure

Four buildings were on-site, including the Pigeon Club, Inchicore Community Sports Center, EVE Tusicint Health Building and St. Michaels Parish Community Center. The Pigeon Club building was demolished in November 2020 to ground level. The former halting site located directly east of the Pigeon Club, was not accessible, was bounded by stone walls and inside contained large boulders, shrubs, trees and fly-tipped waste.

2.6.2. Waste

The entire site is littered with general waste and domestic waste, with evidence of fly-tipping, in addition to routine waste burning noted throughout the ground investigation works in the site area.

2.6.3. Surface Waterbodies

No surface waterbodies were observed during the site walkover. Camac River at its closest is 0.07km northwest of the site and the Grand Canal is 0.11km south of the site.

2.6.4. Monitoring Infrastructure

No monitoring infrastructure was observed during the site walkover.

2.6.5. Asbestos

No asbestos was observed during the site walkover. However, waste was routinely littered onto the site throughout the ground investigation and therefore there is potential for Potentially Containing Asbestos Material (pACM) within the flytipped waste.

3. SOIL CLASSIFICATION

3.1. Hazardous Waste Assessment

To comply with S.I. 233 of 2015 a hazardous waste assessment was carried out utilising HazWasteOnline software using classification engine WM3.v1.1. The software enables the user to review the total pollutant content analysis in terms of any hazardous properties the material may have. The material is assessed against an array of hazardous property thresholds as prescribed in the relevant regulations and guidance.

Soil Classification tables and drawings that detail the soil sampling and laboratory analysis carried out to classify the material as required under S.I. 233 of 2015, Waste Management Act and Landfill Directive will be made available to the contractor as required. These will provide information to allow the Contractor to manage any material which requires export from the site.

The site was prepared with approximate 25mx25m grid spacings with samples taken within each grid within 1m bands down through the strata.

Laboratory Analysis Certificates are attached in Appendix D

The HazWasteOnline (HWOL) Reports are attached in Appendix E.

Waste Soil Classification Grids are attached in Appendix F.

3.2. Waste Acceptance Criteria Assessment

The leachate analysis results and a selection of total pollutant content results have been compared with the thresholds for acceptance of waste at inert, non-hazardous and hazardous landfill facilities as prescribed in the Landfill Directive. An additional category was included which is based on the Integrated Material Solutions Facility waste acceptance criteria which are the same as the inert criteria with the exception of total PAHs (100mg/kg) and a number of metal concentrations. The classification categories are outlined in Table 3.1.

The assessment for each sample is contained in the Waste Assessment Criteria Table at the end of the report and the Laboratory Analysis Certificates are contained in Appendix F.

While OCSC provide an opinion on which potential Receivers may accept any particular type of material, it is up to the individual Receivers to confirm they can accept the material (based on results, site acceptance criteria, void space, percentage of non-natural materials within made ground etc).

Table 3.1 Classification Categories

WASTE CATEGORY	TITLE	CLASSIFICATION CATEGORY	POTENTIAL OUTLET
Category A - Waste Permitted or Recovery Sites	Inert Waste Criteria	Reported concentrations less than inert waste guidelines, which are based on waste acceptance criteria set out by the adopted EU Council Decision 2003/33/EC establishing criteria and procedures for the acceptance of waste at landfills pursuant to Article 16 and Annex II of Directive 1999/31/EC (2002). Results found to be non-hazardous using the HazWasteOnline application. Generally only soil and stone free from anthropogenic contamination (e. g. physical contaminants brick, concrete etc <2%. Free from PAHs, Hydrocarbons, etc). Refer to Guidance on waste accceptance at authorised recovery facilities (EPA, 2020)	Potentially suitable for reuse or recovery subject to Planning and/or Waste Permissions and acceptance criteria.
B1 - e.g. IMS Landfill	Inert Licenced	Analytical results greater than Category A criteria but less than Category B2 waste guidelines, which are based on acceptance criteria set out by adopted EUC Council Decision 2003/33/EC establishing criteria and procedures for the acceptance of waste at landfills pursuant to Article 16 and Annex II of Directive 1999/31/EC (2002) no limit for TOC. Results found to be non-hazardous using the HazWasteOnline.	Disposal at Integrated Material Solutions (IMS) or Walshestown Restoration or similar
Category B2 - e.g. IMS Landfill Inert Inc. Limits	Inert Licenced with elevated limits	Analytical results greater than Category B1 criteria but less than non- hazardous waste guidelines, which are based on acceptance criteria set out by adopted EUC Council Decision 2003/33/EC establishing criteria and procedures for the acceptance of waste at landfills pursuant to Article 16 and Annex II of Directive 1999/31/EC (2002) no limit for TOC. Results found to be non-hazardous using the HazWasteOnline.	Disposal at Integrated Material Solutions (IMS) or Walshestown Restoration or similar
Category C1	Non–Haz Criteria	Acceptance Criteria as laid out in Waste Licence W0129-02 and W0254-01. Reported concentrations less than inert waste guidelines, which are based on waste acceptance criteria set out by the adopted EU Council Decision 2003/33/EC establishing criteria and procedures for the acceptance os waste at landfills pursuant to Article 16 and Annex II of Directive 1999/31/EC (2002) **with the exception of PAHs (Total 17 < 100mg/kg).** Results found to be non-hazardous using the HazWasteOnline application.	Ballynagran, Co. Wicklow W165-02. Drehid, Co. Kildare W0201-01. East Galway, Co. Galway W0178-02. Knockharley Co. Meath W0146-2 or similar or Export
Category C2	**Non–Haz Criteria but with trace asbestos**	Results as per C1 but with trace asbestos	Material will need to be disposed of at a licensed landfill if trace asbestos confirmed. If asbestos level is quantifiable then it may have to be disposed in N. Ireland
Category D	Hazardous	Analytical results found to be hazardous using the HazWasteOnline application.	Enva Portlaoise W0184-02 or direct Export.

NOTE: HazWasteOnline accessed through http:// hazwasteonline.com. Application developed by One Touch Data Limited based on Regulation (EC) No. 1272/2008: the classification, labelling and packaging of substances and mixtures (CLP) and the latest UK Environment Agency guidance, WM3 v1.1. The EPA have stated that the HazWasteOnline tool is acceptable for the classification of wastes in Ireland and they have a licence for the application to review results if required.

NOTE: Where material is sent for RECOVERY it does not incur the Landfill tax (currently €75/tonne)

NOTE: The classifications do not take account of any soil contaminated with invasive plant species.

NOTE: The list of facilities is non-exhaustive

NOTE: While waste soil is classified based on the EU Council Decision 2003/33/EC, waste acceptance criteria may vary at each potential Waste Receiver site and further assessment and consultation may be required with the proposed Waste Receiver to confirm suitability for disposal. In terms of permitted sites, further assessment in terms of potential impact to the environment may be required or inert waste comprising made ground may not be acceptable. The regulations also allow Waste Receivers to agree increased specific limits (e.g. TOC, Sulphates) following Risk Assessment, agreement with the EPA and notification of the EC.

3.3. Waste Codes

Two main soil types and one main rock type were observed during the site investigation:

- MADE GROUND – MADE GROUND depths varied throughout the site, and some surface layers consisted of tarmac or concrete, while others consisted of grass topsoil at the surface layer. Brown silty sandy gravelly CLAY with fragments of mortar, concrete, plastic, timber, glass, and bricks. Multiple brick building structures were observed at varying depths.
- NATIVE – Brown-dark brown firm sandy gravelly CLAY. Dark grey sandy gravelly CLAY with cobbles and boulders.
- BEDROCK – Bedrock was encountered at varying depths throughout the site from 3.05mbgl to 12.6mbgl. Strong thinly laminated grey fined argillaceous LIMESTONE with occasional calcite veins interbedded with weak to medium strong thinly laminated black fine grained calcareous MUDSTONE with pyrite lamination.

Details of waste types, their respective waste codes (List of Waste) are included in Table 3.2:

Table 3.2. Waste Types

Description	LOW Code
SOIL and STONES containing hazardous substances	17 05 03*
SOIL and STONES with construction and demolition waste	17 05 04

3.4. Summary of Soil Classification to Date

Table 3.3 summarises the soil assessment carried out on samples from the site investigation at Emmet Road. The full results of the soil classification including their comparison against the Irish landfill acceptance criteria are compiled in the table presented at the end of the report.

Table 3.3 Soil Classification Results (in situ samples only)

A	B1	B2	C1	C2	D	D
Inert – Waste Permitted or Recovery Sites	e.g. IMS Landfill	e.g. IMS Landfill Inert Inc. Limits	Non-Haz	Non-Haz Quantifiable asbestos	Hazardous	Hazardous with Asbestos > 0.1%
11	98	30	26	1	16	1

183 total samples were included in this WSC analysis.

3.5. Asbestos fibres and sheeting fragments

All of the soil samples collected from the sample locations were submitted to IOM laboratories for asbestos identification and quantification, if required. Results confirmed that all but two of the 183No. samples were negative for asbestos. The two samples containing quantifiable levels were from two hotspots with percentages of 0.003% and 0.176% chrysotile identified in TP19 (2-3mbGL) and WS13 (0-1mbGL), respectively.

There were no asbestos fragments identified during the works. In the event visible asbestos sheeting/fragments is observed or in the instance of WS13 0-1mbgL, have concentrations in excess of 0.1% asbestos, then the soil is typically treated as Hazardous soil.

4. CONTRACTOR REQUIREMENTS AND RECOMMENDATIONS

The following section outlines requirements and recommendations which the Contractor is required to implement regarding the management of waste soil throughout the project.

4.1. Watching Brief

It is possible that unknown isolated hotspot areas which could contain potential contamination could be present on site.

Should the contractor encounter any ground conditions which differ from those outlined in this report and/or the ground investigation reports they should suspend works in that area and notify the Client or their representative.

The contractor is required to ensure that no cross-contamination and/or mixing of materials of different waste categories occurs on site.

4.2. Export from Site

All excavated soil and wastes requiring export from the site, for recovery or disposal offsite, shall require waste classification. Waste classification shall be carried out by a suitability qualified and experienced person via sampling and analysis following best industry practice and relevant legislation including:

- List of Waste & Determining if Waste is Hazardous or Non-Hazardous (EPA, 2015);
- European Waste Framework Directive (2008/98/EC);
- Guidance on the classification and assessment of waste, Technical Guidance WM3 (EA et al, 2015);
- EU Council Decision 2003/33/EC and 1999/31/EC (2002);
- European Union (Properties of Waste which render it Hazardous) Regulations 2015 – S.I. 233 of 2015;
- EC Classification, Labelling & Packaging Regulations (No. 1272/2008).

Written confirmation shall be obtained from the proposed Receiver (either under an Article 27 Declaration or Waste Permission) in advance of materials being removed from site. All Waste Receivers and Waste Hauliers shall hold valid and appropriate permissions and shall be preapproved by the Client or their Representative.

Where material is to be exported out of the State it shall be carried out with the agreement of the TFS office and in accordance with all relevant legislation including:

- Waste Management (Movement of Hazardous Waste) Regulations, 1998 (S.I. No. 147 of 1998);
- The European Communities (Transfrontier Shipment of Hazardous Waste) Regulations, 1988 (S.I. No. 248 of 1988);
- The Basel Convention; and

- European Communities (Shipments of Hazardous Waste exclusively within Ireland) Regulations 2011 (S.I. No. 324 of 2011).

4.3. Documentation

Waste disposal shall be documented within a Waste Documentation System which shall be developed by the Contractor within the overall document management system for the works and shall be included in the Construction Management Plan (CMP). The documentation to be maintained in relation to wastes shall include the following:

- Details of all parties involved in the transport of material (including. Hauliers, Agents, Shipping details etc.);
- Details of the Waste Receivers including any intermediary facilities;
- Written confirmation of the acceptance and recovery/disposal of any hazardous waste consignments;
- The tonnages and Waste Code for all waste materials;
- Details of each individual consignment of waste including:
    - Docket number of consignment;
    - Date and time;
    - Name of Haulier, vehicle registration and Driver;
    - Volume/weight of consignment;
    - Description of material and origin (stockpile or cell number);
    - Name of receiving facility;
    - Date and time of arrival at receiving facility; and
    - Docket/weighbridge ticket number from receiving facility.
- All Waste Transfer Forms for hazardous waste.

The Contractor shall maintain an electronic register with the aforementioned details, as well as copies of all dockets from hauliers, and receivers. The Contractor shall provide regular reports to the Client or its representative including copies of the register and dockets if required.

5 CONCLUSIONS AND RECOMMENDATIONS

- The site for assessment is on Emmet Road at Inchicore, Dublin 8 and currently comprises of a vacant grass field (demolished former St. Michaels residential estate), a former halting site, a recreational club building, an employment building centre and a health community centre. The surrounding area is a mixture of residential, commercial/industrial/retail and recreational land use.
- The proposed development includes the provision of residential buildings in addition to commercial, retail and community facilities and all associated with new infrastructure, including roads, footpaths, services and landscaping.
- The former halting site, located directly east of the Pigeon Club, was not accessible during the site investigation and was bounded by stone walls and inside contained large boulders, shrubs, trees and fly-tipped waste.
- The ground investigation was completed between September to October 2020. In total 183No. soil samples were analysed from 68No. locations including boreholes, trial pits and window sampling.
- A total of 11No. samples have been identified as category A Inert, 98No. samples as category B1 Inert, 30No. samples as category B2 Inert Inc. Limits, 26No. samples as C1 Non-Haz, 1No. samples as C1 Non-Haz with Quantifiable asbestos, 16No. samples as D Hazardous and 1No. sample as D Hazardous with >0.1% asbestos.

5.1 Recommendations

- An asbestos survey should be completed in the buildings to be demolished or refurbished prior to the demolition of any buildings or removal of material.
- It is recommended that a watching brief is undertaken for asbestos containing materials or observed contamination to ensure the most appropriate disposal.
- As required, seek confirmation in writing from the individual facilities that they can accept the material as classified.
- Consider undertaking additional site investigation of the former halting site.

Hazardous classes subject to confirmation with waste facility
NAD = no asbestos detected
N/A = not analysed

HWOL = HazWasteOnline. HazWasteOnline accessed through http://www.hazwasteonline.com. Application developed by One Touch Data Limited based on Regulation (EC) No. 1272/2008: the classification, labelling and packaging of substances and mixtures (CLP) and the latest UK Environment Agency guidance, WM3 v1. The EPA have stated that the HazWasteOnline tool is acceptable for the classification of wastes in Ireland and they have a licence for the application to review results if required.

While waste soil is classified based on the EU Council Decision 2003/33/EC, waste acceptance criteria may vary at each potential Waste Receiver site and further assessment and consultation may be required with the proposed Waste Receiver to confirm suitability for disposal. In terms of permitted sites, further assessment in terms of potential impact to the environment may be required or inert waste comprising made ground may not be acceptable.

HWOL = HazWasteOnline. HazWasteOnline accessed through http://www.hazwasteonline.com. Application developed by One Touch Data Limited based on Regulation (EC) No. 1272/2008: the classification, labelling and packaging of substances and mixtures (CLP) and the latest UK Environment Agency guidance, WM3 v1. The EPA have stated that the HazWasteOnline tool is acceptable for the classification of wastes in Ireland and they have a licence for the application to review results if required.

While waste soil is classified based on the EU Council Decision 2003/33/EC, waste acceptance criteria may vary at each potential Waste Receiver site and further assessment and consultation may be required with the proposed Waste Receiver to confirm suitability for disposal. In terms of permitted sites, further assessment in terms of potential impact to the environment may be required or inert waste comprising made ground may not be acceptable.

Hazardous classes subject to confirmation with waste facility
NAD = no asbestos detected
N/A = not analysed

HWOL = HazWasteOnline. HazWasteOnline accessed through http://www.hazwasteonline.com. Application developed by One Touch Data Limited based on Regulation (EC) No. 1272/2008: the classification, labelling and packaging of substances and mixtures (CLP) and the latest UK Environment Agency guidance, WM3 v1. The EPA have stated that the HazWasteOnline tool is acceptable for the classification of wastes in Ireland and they have a licence for the application to review results if required.

While waste soil is classified based on the EU Council Decision 2003/33/EC, waste acceptance criteria may vary at each potential Waste Receiver site and further assessment and consultation may be required with the proposed Waste Receiver to confirm suitability for disposal. In terms of permitted sites, further assessment in terms of potential impact to the environment may be required or inert waste comprising made ground may not be acceptable.

Hazardous classes subject to confirmation with waste facility
NAD = no asbestos detected
N/A = not analysed

HWOL = HazWasteOnline. HazWasteOnline accessed through http://www.hazwasteonline.com. Application developed by One Touch Data Limited based on Regulation (EC) No. 1272/2008: the classification, labelling and packaging of substances and mixtures (CLP) and the latest UK Environment Agency guidance, WM3 v1. The EPA have stated that the HazWasteOnline tool is acceptable for the classification of wastes in Ireland and they have a licence for the application to review results if required.

While waste soil is classified based on the EU Council Decision 2003/33/EC, waste acceptance criteria may vary at each potential Waste Receiver site and further assessment and consultation may be required with the proposed Waste Receiver to confirm suitability for disposal. In terms of permitted sites, further assessment in terms of potential impact to the environment may be required or inert waste comprising made ground may not be acceptable.

N/A = not analysed

HWOL = HazWasteOnline. HazWasteOnline accessed through http://www.hazwasteonline.com. Application developed by One Touch Data Limited based on Regulation (EC) No. 1272/2008: the classification, labelling and packaging of substances and mixtures (CLP) and the latest UK Environment Agency guidance, WM3 v1. The EPA have stated that the HazWasteOnline tool is acceptable for the classification of wastes in Ireland and they have a licence for the application to review results if required.

While waste soil is classified based on the EU Council Decision 2003/33/EC, waste acceptance criteria may vary at each potential Waste Receiver site and further assessment and consultation may be required with the proposed Waste Receiver to confirm suitability for disposal. In terms of permitted sites, further assessment in terms of potential impact to the environment may be required or inert waste comprising made ground may not be acceptable.

HWOL = HazWasteOnline. HazWasteOnline accessed through http://www.hazwasteonline.com. Application developed by One Touch Data Limited based on Regulation (EC) No. 1272/2008: the classification, labelling and packaging of substances and mixtures (CLP) and the latest UK Environment Agency guidance, WM3 v1. The EPA have stated that the HazWasteOnline tool is acceptable for the classification of wastes in Ireland and they have a licence for the application to review results if required.

While waste soil is classified based on the EU Council Decision 2003/33/EC, waste acceptance criteria may vary at each potential Waste Receiver site and further assessment and consultation may be required with the proposed Waste Receiver to confirm suitability for disposal. In terms of permitted sites, further assessment in terms of potential impact to the environment may be required or inert waste comprising made ground may not be acceptable.

Asbestos Result										**NAD**	**NAD**	**NAD**	**NAD**	**NAD**	**NAD**	**NAD**	**NAD**

NOTES:
Categories explained in OCSC Waste Categories Table
Hazardous classes subject to confirmation with waste facility
NAD = no asbestos detected
N/A = not analysed

HWOL = HazWasteOnline. HazWasteOnline accessed through http://www.hazwasteonline.com. Application developed by One Touch Data Limited based on Regulation (EC) No. 1272/2008: the classification, labelling and packaging of substances and mixtures (CLP) and the latest UK Environment Agency guidance, WM3 v1. The EPA have stated that the HazWasteOnline tool is acceptable for the classification of wastes in Ireland and they have a licence for the application to review results if required.

While waste soil is classified based on the EU Council Decision 2003/33/EC, waste acceptance criteria may vary at each potential Waste Receiver site and further assessment and consultation may be required with the proposed Waste Receiver to confirm suitability for disposal. In terms of permitted sites, further assessment in terms of potential impact to the environment may be required or inert waste comprising made ground may not be acceptable.

Attention :	Richard Thompson
Date :	29th September, 2020
Your reference :	B967
Our reference :	Test Report 20/12733 Batch 1
Location :	Emmet Road
Date samples received :	18th September, 2020
Status :	Final report
Issue :	2

Sixteen samples were received for analysis on 18th September, 2020 of which sixteen were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
No deviating sample report results for job 20/12733						

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.

Please include all sections of this report if it is reproduced

Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/12733

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

EMT Job No: 20/12733

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis

Our reference :	Test Report 20/12904 Batch 1
Location :	Emmet Road
Date samples received :	22nd September, 2020
Status :	Final report
Issue :	2

Twenty six samples were received for analysis on 22nd September, 2020 of which twenty six were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
No deviating sample report results for job 20/12904						

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.
Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/12904

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

Our reference :	Test Report 20/12992 Batch 1
Location :	Emmet Road
Date samples received :	23rd September, 2020
Status :	Final report
Issue :	1

Seventeen samples were received for analysis on 23rd September, 2020 of which sixteen were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

Note:

Asbestos Screen analysis is carried out in accordance with our documented in-house methods PM042 and TM065 and HSG 248 by Stereo and Polarised Light Microscopy using Dispersion Staining Techniques and is covered by our UKAS accreditation. Detailed Gravimetric Quantification and PCOM Fibre Analysis is carried out in accordance with our documented in-house methods PM042 and TM131 and HSG 248 using Stereo and Polarised Light Microscopy and Phase Contrast Optical Microscopy (PCOM). Samples are retained for not less than 6 months from the date of analysis unless specifically requested.

Opinions, including ACM type and Asbestos level less than 0.1%, lie outside the scope of our UKAS accreditation.

Where the sample is not taken by a Element Materials Technology consultant, Element Materials Technology cannot be responsible for inaccurate or unrepresentative sampling.

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
No deviating sample report results for job 20/12992						

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.
Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/12992

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

EMT Job No: 20/12992

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.	PM0	No preparation is required.			AR	
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes

Attention :	Richard Thompson
Date :	8th October, 2020
Your reference :	B96713
Our reference :	Test Report 20/13079 Batch 1
Location :	Emeret Road
Date samples received :	24th September, 2020
Status :	Final report
Issue :	2

Sixteen samples were received for analysis on 24th September, 2020 of which sixteen were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

Reference: B96713
Location: Emeret Road
Contact: Richard Thompson

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
No deviating sample report results for job 20/13079						

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.
Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/13079

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range
AA	x10 Dilution

EMT Job No: 20/13079

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.	PM0	No preparation is required.			AR	
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM16	Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR

Attention :	Richard Thompson
Date :	8th October, 2020
Your reference :	B967/1
Our reference :	Test Report 20/13184 Batch 1
Location :	Emmet Road
Date samples received :	25th September, 2020
Status :	Final report
Issue :	1

Fifteen samples were received for analysis on 25th September, 2020 of which thirteen were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
No deviating sample report results for job 20/13184						

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.
Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/13184

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

EMT Job No: 20/13184

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.	PM0	No preparation is required.			AR	
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM16	Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR	
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM8/PM16	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required/Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM8/PM16	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required/Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.	Yes		AR	Yes
TM5/TM36	please refer to TM5 and TM36 for method details	PM8/PM12/PM16	please refer to PM8/PM16 and PM12 for method details			AR	Yes
TM17	Modified US EPA method 8270D v5:2014. Determination of specific Polychlorinated Biphenyl congeners by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM20	Modified BS 1377-3:1990/USEPA 160.1/3 (TDS/TS: 1971) Gravimetric determination of Total Dissolved Solids/Total Solids	PM0	No preparation is required.	Yes		AR	Yes
TM21	Modified BS 7755-3:1995, ISO10694:1995 Determination of Total Organic Carbon or Total Carbon by combustion in an Eltra TOC furnace/analyser in the presence of oxygen. The CO2 generated is quantified using infra-red detection. Organic Matter (SOM) calculated as per EA MCERTS Chemical Testing of Soil, March 2012 v4.	PM24	Dried and ground solid samples are washed with hydrochloric acid, then rinsed with deionised water to remove the mineral carbon before TOC analysis.	Yes		AD	Yes

EMT Job No: 20/13184

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
TM21	Modified BS 7755-3:1995, ISO10694:1995 Determination of Total Organic Carbon or Total Carbon by combustion in an Eltra TOC furnace/analyser in the presence of oxygen. The CO2 generated is quantified using infra-red detection. Organic Matter (SOM) calculated as per EA MCERTS Chemical Testing of Soil, March 2012 v4.	PM89	Preparation of positive asbestos samples for Eltra analysis			AD	Yes
TM22	Modified BS1377-3:1990 Gravimetric determination of Loss on Ignition by temperature controlled Muffle Furnace (35C-440C). On request modified ASTM D2974-00 LOI (105C-440C)	PM0	No preparation is required.			AD	Yes
TM22	Modified BS1377-3:1990 Gravimetric determination of Loss on Ignition by temperature controlled Muffle Furnace (35C-440C). On request modified ASTM D2974-00 LOI (105C-440C)	PM0	No preparation is required.	Yes		AD	Yes
TM26	Determination of phenols by Reversed Phased High Performance Liquid Chromatography and Electro-Chemical Detection.	PM0	No preparation is required.			AR	Yes
TM26	Determination of phenols by Reversed Phased High Performance Liquid Chromatography and Electro-Chemical Detection.	PM21	As received solid samples are extracted in Methanol: Sodium Hydroxide (0.1M NaOH) (60:40) by orbital shaker.	Yes		AR	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM15	Acid digestion of dried and ground solid samples using Aqua Regia refluxed at 112.5 °C. Samples containing asbestos are not dried and ground.			AD	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM15	Acid digestion of dried and ground solid samples using Aqua Regia refluxed at 112.5 °C. Samples containing asbestos are not dried and ground.	Yes		AD	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM17	Modified method BS EN12457-2:2002 As received solid samples are leached with water in a 10:1 water to soil ratio for 24 hours, the moisture content of the sample is included in the ratio.	Yes		AR	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM62	Acid digestion of as received solid samples using Aqua Regia refluxed at 112.5 °C.			AR	Yes
TM36	Modified US EPA method 8015B v2:1996. Determination of Gasoline Range Organics (GRO) in the carbon chain range of C4-12 by headspace GC-FID. MTBE by GCFID co-elutes with 3-methylpentane if present and therefore can give a false positive. Positive MTBE re	PM12	Modified US EPA method 5021A v2:2014. Preparation of solid and liquid samples for GC headspace analysis.			AR	Yes

EMT Job No: 20/13184

Attention :	Richard Thompson
Date :	13th October, 2020
Your reference :	B967/1
Our reference :	Test Report 20/13299 Batch 1
Location :	Emmet Road
Date samples received :	29th September, 2020
Status :	Final report
Issue :	1

Thirty three samples were received for analysis on 29th September, 2020 of which thirty two were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

Note:

Asbestos Screen analysis is carried out in accordance with our documented in-house methods PM042 and TM065 and HSG 248 by Stereo and Polarised Light Microscopy using Dispersion Staining Techniques and is covered by our UKAS accreditation. Detailed Gravimetric Quantification and PCOM Fibre Analysis is carried out in accordance with our documented in-house methods PM042 and TM131 and HSG 248 using Stereo and Polarised Light Microscopy and Phase Contrast Optical Microscopy (PCOM). Samples are retained for not less than 6 months from the date of analysis unless specifically requested.

Opinions, including ACM type and Asbestos level less than 0.1%, lie outside the scope of our UKAS accreditation.

Where the sample is not taken by a Element Materials Technology consultant, Element Materials Technology cannot be responsible for inaccurate or unrepresentative sampling.

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
No deviating sample report results for job 20/13299						

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.
Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/13299

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range
AA	x10 Dilution

EMT Job No: 20/13299

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.	PM0	No preparation is required.			AR	
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM16	Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR

Your reference :	B967/1
Our reference :	Test Report 20/13350 Batch 1
Location :	Emmet Rd
Date samples received :	30th September, 2020
Status :	Final report
Issue :	1

Sixteen samples were received for analysis on 30th September, 2020 of which fifteen were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

Please include all sections of this report if it is reproduced
All solid results are expressed on a dry weight basis unless stated otherwise.

Client Name: O'Connor Sutton Cronin & Assoc. Ltd
Reference: B967/1
Location: Emmet Rd
Contact: Richard Thompson
EMT Job No: 20/13350

Report : CEN 10:1 1 Batch

Solids: V=60g VOC jar, J=250g glass jar, T=plastic tub

Please see attached notes for all abbreviations and acronyms

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
No deviating sample report results for job 20/13350						

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.
Only analyses which are accredited are recorded as deviating if set criteria are not met.

Please include all sections of this report if it is reproduced

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/13350

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range
AA	x10 Dilution

EMT Job No: 20/13350

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.	PM0	No preparation is required.			AR	
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes

Our reference :	Test Report 20/13444 Batch 1
Location :	Emmet Road
Date samples received :	1st October, 2020
Status :	Final report
Issue :	1.2

Twenty one samples were received for analysis on 1st October, 2020 of which twenty one were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
No deviating sample report results for job 20/13444						

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.
Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/13444

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

EMT Job No: 20/13444

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.	PM0	No preparation is required.			AR	
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM16	Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR

Attention :	Richard Thompson
Date :	14th October, 2020
Your reference :	B967/1
Our reference :	Test Report 20/13523 Batch 1
Location :	Emmet Road
Date samples received :	2nd October, 2020
Status :	Final report
Issue :	1

Twelve samples were received for analysis on 2nd October, 2020 of which twelve were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
No deviating sample report results for job 20/13523						

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.
Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/13523

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

EMT Job No: 20/13523

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.	PM0	No preparation is required.			AR	
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM16	Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR

Our reference :	Test Report 20/13660 Batch 1
Location :	Emmet Road
Date samples received :	6th October, 2020
Status :	Final report
Issue :	1

Twelve samples were received for analysis on 6th October, 2020 of which twelve were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
No deviating sample report results for job 20/13660						

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.
Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/13660

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

EMT Job No: 20/13660

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.	PM0	No preparation is required.			AR	
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM16	Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR

Extraction of as received sample using 10:1 ratio of 0.2M sodium hydroxide to soil for hexavalent chromium using a reciprocal shaker.	Yes		AR	Yes

EMT Job No: 20/13660

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
TM50	Acid soluble sulphate (Total Sulphate) analysed by ICP-OES	PM29	A hot hydrochloric acid digest is performed on a dried and ground sample, and the resulting liquor is analysed.	Yes		AD	Yes
TM60	TC/TOC analysis of Waters by High Temperature Combustion followed by NDIR detection. Based on the following modified standard methods: USEPA 9060A (2002), APHA SMEWW 5310B:1999 22nd Edition, ASTM D 7573, and USEPA 415.1.	PM0	No preparation is required.			AR	Yes
TM61	Determination of Mercury by Cold Vapour Atomic Fluorescence - WATERS: Modified USEPA Method 245.7, Rev 2, Feb 2005. SOILS: Modified USEPA Method 7471B, Rev.2, Feb 2007	PM0	No preparation is required.	Yes		AR	Yes
TM73	Modified US EPA methods 150.1 (1982) and 9045D Rev. 4 - 2004) and BS1377-3:1990. Determination of pH by Metrohm automated probe analyser.	PM11	Extraction of as received solid samples using one part solid to 2.5 parts deionised water.	Yes		AR	No
TM74	Analysis of water soluble boron (20:1 extract) by ICP-OES.	PM32	Hot water soluble boron is extracted from dried and ground samples using a 20:1 ratio.	Yes		AD	Yes
TM89	Modified USEPA method OIA-1667 (1999). Determination of cyanide by Flow Injection Analyser. Where WAD cyanides are required a Ligand displacement step is carried out before analysis.	PM45	As received solid samples are extracted with 1M NaOH by orbital shaker for Cyanide, Sulphide and Thiocyanate analysis.	Yes		AR	Yes
TM107	Determination of Sulphide/Thiocyanate by Skalar Continuous Flow Analyser	PM45	As received solid samples are extracted with 1M NaOH by orbital shaker for Cyanide, Sulphide and Thiocyanate analysis.			AR	Yes
TM108	Determination of Elemental Sulphur by Reversed Phase High Performance Liquid Chromatography with Ultra Violet spectroscopy.	PM114	End over end extraction of dried and crushed soil samples for organic analysis. The solvent mix varies depending on analysis required			AD	Yes
TM160	Titrimetric determination of acid reserve to pH 4.0 or alkali reserve to pH 10.0 based on method C14.2 Canadian Government (2013).	PM110	Preparation of a 10% (w/w) aqueous solution of soil in distilled water			AR	No
TM173	Analysis of fluoride by ISE (Ion Selective Electrode) using modified ISE method 9214 - 340.2 (EPA 1998)	PM0	No preparation is required.			AR	Yes

EMT Job No: 20/13660

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
NONE	No Method Code	NONE	No Method Code			AD	Yes
NONE	No Method Code	PM17	Modified method BS EN12457-2:2002 As received solid samples are leached with water in a 10:1 water to soil ratio for 24 hours, the moisture content of the sample is included in the ratio.			AR	
NONE	No Method Code	PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.			AR

Attention :	Richard Thompson
Date :	27th October, 2020
Your reference :	B967/1
Our reference :	Test Report 20/14108 Batch 1
Location :	Emmet Road
Date samples received :	14th October, 2020
Status :	Final report
Issue :	1.2

Twenty eight samples were received for analysis on 14th October, 2020 of which twenty six were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
No deviating sample report results for job 20/14108						

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.
Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/14108

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

EMT Job No: 20/14108

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.	PM0	No preparation is required.			AR	
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM16	Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR	
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM8/PM16	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required/Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM8/PM16	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required/Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.	Yes		AR	Yes
TM5/TM36	please refer to TM5 and TM36 for method details	PM8/PM12/PM16	please refer to PM8/PM16 and PM12 for method details			AR	Yes
TM17	Modified US EPA method 8270D v5:2014. Determination of specific Polychlorinated Biphenyl congeners by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM20	Modified BS 1377-3:1990/USEPA 160.1/3 (TDS/TS: 1971) Gravimetric determination of Total Dissolved Solids/Total Solids	PM0	No preparation is required.	Yes		AR	Yes
TM21	Modified BS 7755-3:1995, ISO10694:1995 Determination of Total Organic Carbon or Total Carbon by combustion in an Eltra TOC furnace/analyser in the presence of oxygen. The CO2 generated is quantified using infra-red detection. Organic Matter (SOM) calculated as per EA MCERTS Chemical Testing of Soil, March 2012 v4.	PM24	Dried and ground solid samples are washed with hydrochloric acid, then rinsed with deionised water to remove the mineral carbon before TOC analysis.	Yes		AD	Yes

EMT Job No: 20/14108

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
TM21	Modified BS 7755-3:1995, ISO10694:1995 Determination of Total Organic Carbon or Total Carbon by combustion in an Eltra TOC furnace/analyser in the presence of oxygen. The CO2 generated is quantified using infra-red detection. Organic Matter (SOM) calculated as per EA MCERTS Chemical Testing of Soil, March 2012 v4.	PM89	Preparation of positive asbestos samples for Eltra analysis			AD	Yes
TM22	Modified BS1377-3:1990 Gravimetric determination of Loss on Ignition by temperature controlled Muffle Furnace (35C-440C). On request modified ASTM D2974-00 LOI (105C-440C)	PM0	No preparation is required.			AD	Yes
TM22	Modified BS1377-3:1990 Gravimetric determination of Loss on Ignition by temperature controlled Muffle Furnace (35C-440C). On request modified ASTM D2974-00 LOI (105C-440C)	PM0	No preparation is required.	Yes		AD	Yes
TM26	Determination of phenols by Reversed Phased High Performance Liquid Chromatography and Electro-Chemical Detection.	PM0	No preparation is required.			AR	Yes
TM26	Determination of phenols by Reversed Phased High Performance Liquid Chromatography and Electro-Chemical Detection.	PM21	As received solid samples are extracted in Methanol: Sodium Hydroxide (0.1M NaOH) (60:40) by orbital shaker.	Yes		AR	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM15	Acid digestion of dried and ground solid samples using Aqua Regia refluxed at 112.5 °C. Samples containing asbestos are not dried and ground.			AD	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM15	Acid digestion of dried and ground solid samples using Aqua Regia refluxed at 112.5 °C. Samples containing asbestos are not dried and ground.	Yes		AD	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM17	Modified method BS EN12457-2:2002 As received solid samples are leached with water in a 10:1 water to soil ratio for 24 hours, the moisture content of the sample is included in the ratio.	Yes		AR	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM62	Acid digestion of as received solid samples using Aqua Regia refluxed at 112.5 °C.			AR	Yes
TM36	Modified US EPA method 8015B v2:1996. Determination of Gasoline Range Organics (GRO) in the carbon chain range of C4-12 by headspace GC-FID. MTBE by GCFID co-elutes with 3-methylpentane if present and therefore can give a false positive. Positive MTBE re	PM12	Modified US EPA method 5021A v2:2014. Preparation of solid and liquid samples for GC headspace analysis.			AR	Yes

EMT Job No: 20/14108

Preparation of solid and liquid samples for GC headspace analysis.	Yes		AR	Yes
TM38	Soluble Ion analysis using Discrete Analyser. Modified US EPA methods: Chloride 325.2 (1978), Sulphate 375.4 (Rev.2 1993), o-Phosphate 365.2 (Rev.2 1993), TON 353.1 (Rev.2 1993), Nitrite 354.1 (1971), Hex Cr 7196A (1992), NH4+ 350.1 (Rev.2 1993 (comparabl	PM0	No preparation is required.	Yes		AR	Yes
TM38	Soluble Ion analysis using Discrete Analyser. Modified US EPA methods: Chloride 325.2 (1978), Sulphate 375.4 (Rev.2 1993), o-Phosphate 365.2 (Rev.2 1993), TON 353.1 (Rev.2 1993), Nitrite 354.1 (1971), Hex Cr 7196A (1992), NH4+ 350.1 (Rev.2 1993 (comparabl	PM20	Extraction of dried and ground or as received samples with deionised water in a 2:1 water to solid ratio using a reciprocal shaker for all analytes except hexavalent chromium. Extraction of as received sample using 10:1 ratio of 0.2M sodium hydroxide to soil for hexavalent chromium using a reciprocal shaker.	Yes		AR	Yes
TM50	Acid soluble sulphate (Total Sulphate) analysed by ICP-OES	PM129	A hot hydrochloric acid digest is performed on an as received sample, and the resulting liquor is analysed.			AR	Yes
TM50	Acid soluble sulphate (Total Sulphate) analysed by ICP-OES	PM29	A hot hydrochloric acid digest is performed on a dried and ground sample, and the resulting liquor is analysed.	Yes		AD	Yes
TM60	TC/TOC analysis of Waters by High Temperature Combustion followed by NDIR detection. Based on the following modified standard methods: USEPA 9060A (2002), APHA SMEWW 5310B:1999 22nd Edition, ASTM D 7573, and USEPA 415.1.	PM0	No preparation is required.			AR	Yes
TM61	Determination of Mercury by Cold Vapour Atomic Fluorescence - WATERS: Modified USEPA Method 245.7, Rev 2, Feb 2005. SOILS: Modified USEPA Method 7471B, Rev.2, Feb 2007	PM0	No preparation is required.	Yes		AR	Yes
TM65	Asbestos Bulk Identification method based on HSG 248 First edition (2006)	PM42	Modified SCA Blue Book V.12 draft 2017 and WM3 1st Edition v1.1:2018. Solid samples undergo a thorough visual inspection for asbestos fibres prior to asbestos identification using TM065.	Yes		AR	
TM73	Modified US EPA methods 150.1 (1982) and 9045D Rev. 4 - 2004) and BS1377-3:1990. Determination of pH by Metrohm automated probe analyser.	PM11	Extraction of as received solid samples using one part solid to 2.5 parts deionised water.	Yes		AR	No
TM74	Analysis of water soluble boron (20:1 extract) by ICP-OES.	PM32	Hot water soluble boron is extracted from dried and ground samples using a 20:1 ratio.	Yes		AD	Yes

EMT Job No: 20/14108

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
TM74	Analysis of water soluble boron (20:1 extract) by ICP-OES.	PM61	As received solid samples are extracted with hot water in a 20:1 ratio of water to soil ready for analysis by ICP.			AR	Yes
TM89	Modified USEPA method OIA-1667 (1999). Determination of cyanide by Flow Injection Analyser. Where WAD cyanides are required a Ligand displacement step is carried out before analysis.	PM45	As received solid samples are extracted with 1M NaOH by orbital shaker for Cyanide, Sulphide and Thiocyanate analysis.	Yes		AR	Yes
TM107	Determination of Sulphide/Thiocyanate by Skalar Continuous Flow Analyser	PM45	As received solid samples are extracted with 1M NaOH by orbital shaker for Cyanide, Sulphide and Thiocyanate analysis.			AR	Yes
TM108	Determination of Elemental Sulphur by Reversed Phase High Performance Liquid Chromatography with Ultra Violet spectroscopy.	PM114	End over end extraction of dried and crushed soil samples for organic analysis. The solvent mix varies depending on analysis required			AD	Yes
TM108	Determination of Elemental Sulphur by Reversed Phase High Performance Liquid Chromatography with Ultra Violet spectroscopy.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes
TM160	Titrimetric determination of acid reserve to pH 4.0 or alkali reserve to pH 10.0 based on method C14.2 Canadian Government (2013).	PM110	Preparation of a 10% (w/w) aqueous solution of soil in distilled water			AR	No
TM173	Analysis of fluoride by ISE (Ion Selective Electrode) using modified ISE method 9214 - 340.2 (EPA 1998)	PM0	No preparation is required.			AR	Yes
NONE	No Method Code	NONE	No Method Code			AD	Yes
NONE	No Method Code	NONE	No Method Code			AR	Yes
NONE	No Method Code	PM17	Modified method BS EN12457-2:2002 As received solid samples are leached with water in a 10:1 water to soil ratio for 24 hours, the moisture content of the sample is included in the ratio.			AR

Attention :	Richard Thompson
Date :	28th October, 2020
Your reference :	B967/1
Our reference :	Test Report 20/14178 Batch 1
Location :	Emmet Road
Date samples received :	15th October, 2020
Status :	Final report
Issue :	2

Ten samples were received for analysis on 15th October, 2020 of which nine were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
No deviating sample report results for job 20/14178						

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.
Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/14178

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range
AA	x5 Dilution

EMT Job No: 20/14178

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.	PM0	No preparation is required.			AR	
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes

Our reference :	Test Report 20/14172 Batch 1
Location :	Emmet Road
Date samples received :	15th October, 2020
Status :	Final report
Issue :	2

Two samples were received for analysis on 15th October, 2020 of which two were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

Note:

Asbestos Screen analysis is carried out in accordance with our documented in-house methods PM042 and TM065 and HSG 248 by Stereo and Polarised Light Microscopy using Dispersion Staining Techniques and is covered by our UKAS accreditation. Detailed Gravimetric Quantification and PCOM Fibre Analysis is carried out in accordance with our documented in-house methods PM042 and TM131 and HSG 248 using Stereo and Polarised Light Microscopy and Phase Contrast Optical Microscopy (PCOM). Samples are retained for not less than 6 months from the date of analysis unless specifically requested.

Opinions, including ACM type and Asbestos level less than 0.1%, lie outside the scope of our UKAS accreditation.

Where the sample is not taken by a Element Materials Technology consultant, Element Materials Technology cannot be responsible for inaccurate or unrepresentative sampling.

Matrix : Solid

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
20/14172	1	BH03	0.80-1.00	1-3	Cyanide, LOI, Phenols, Tot SO4	Sample holding time exceeded
20/14172	1	BH03	3.00-3.40	4-6	Cyanide, LOI, Phenols, Tot SO4	Sample holding time exceeded

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.

Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/14172

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

EMT Job No: 20/14172

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.	PM0	No preparation is required.			AR	
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM16	Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR	
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM8/PM16	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required/Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM8/PM16	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required/Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.	Yes		AR	Yes
TM5/TM36	please refer to TM5 and TM36 for method details	PM8/PM12/PM16	please refer to PM8/PM16 and PM12 for method details			AR	Yes
TM17	Modified US EPA method 8270D v5:2014. Determination of specific Polychlorinated Biphenyl congeners by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM20	Modified BS 1377-3:1990/USEPA 160.1/3 (TDS/TS: 1971) Gravimetric determination of Total Dissolved Solids/Total Solids	PM0	No preparation is required.	Yes		AR	Yes
TM21	Modified BS 7755-3:1995, ISO10694:1995 Determination of Total Organic Carbon or Total Carbon by combustion in an Eltra TOC furnace/analyser in the presence of oxygen. The CO2 generated is quantified using infra-red detection. Organic Matter (SOM) calculated as per EA MCERTS Chemical Testing of Soil, March 2012 v4.	PM24	Dried and ground solid samples are washed with hydrochloric acid, then rinsed with deionised water to remove the mineral carbon before TOC analysis.	Yes		AD	Yes

EMT Job No: 20/14172

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
TM22	Modified BS1377-3:1990 Gravimetric determination of Loss on Ignition by temperature controlled Muffle Furnace (35C-440C). On request modified ASTM D2974-00 LOI (105C-440C)	PM0	No preparation is required.	Yes		AD	Yes
TM26	Determination of phenols by Reversed Phased High Performance Liquid Chromatography and Electro-Chemical Detection.	PM0	No preparation is required.			AR	Yes
TM26	Determination of phenols by Reversed Phased High Performance Liquid Chromatography and Electro-Chemical Detection.	PM21B	As Received samples are extracted in Methanol: Water (60:40) by reciprocal shaker.	Yes		AR	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM15	Acid digestion of dried and ground solid samples using Aqua Regia refluxed at 112.5 °C. Samples containing asbestos are not dried and ground.			AD	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM15	Acid digestion of dried and ground solid samples using Aqua Regia refluxed at 112.5 °C. Samples containing asbestos are not dried and ground.	Yes		AD	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM17	Modified method BS EN12457-2:2002 As received solid samples are leached with water in a 10:1 water to soil ratio for 24 hours, the moisture content of the sample is included in the ratio.	Yes		AR	Yes
TM36	Modified US EPA method 8015B v2:1996. Determination of Gasoline Range Organics (GRO) in the carbon chain range of C4-12 by headspace GC-FID. MTBE by GCFID co-elutes with 3-methylpentane if present and therefore can give a false positive. Positive MTBE results will be re-run using GC-MS to double check, when requested.	PM12	Modified US EPA method 5021A v2:2014. Preparation of solid and liquid samples for GC headspace analysis.			AR	Yes
TM36	Modified US EPA method 8015B v2:1996. Determination of Gasoline Range Organics (GRO) in the carbon chain range of C4-12 by headspace GC-FID. MTBE by GCFID co-elutes with 3-methylpentane if present and therefore can give a false positive. Positive MTBE results will be re-run using GC-MS to double check, when requested.	PM12	Modified US EPA method 5021A v2:2014. Preparation of solid and liquid samples for GC headspace analysis.	Yes		AR	Yes
TM38	Soluble Ion analysis using Discrete Analyser. Modified US EPA methods: Chloride 325.2 (1978), Sulphate 375.4 (Rev.2 1993), o-Phosphate 365.2 (Rev.2 1993), TON 353.1 (Rev.2 1993), Nitrite 354.1 (1971), Hex Cr 7196A (1992), NH4+ 350.1 (Rev.2 1993 (comparabl	PM0	No preparation is required.	Yes		AR	Yes

Attention :	Diarmaid MagLochlainn
Date :	26th November, 2020
Your reference :	9897-08-20
Our reference :	Test Report 20/14656 Batch 1
Location :	Emmet Road
Date samples received :	23rd October, 2020
Status :	Final report
Issue :	2

Sixteen samples were received for analysis on 23rd October, 2020 of which sixteen were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.

Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/14656

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

EMT Job No: 20/14656

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465:1993(E) and BS1377-2:1990.	PM0	No preparation is required.			AR	
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes
TM4	Modified USEPA 8270D v5:2014 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM16	Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR	
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM8/PM16	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required/Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.			AR	Yes
TM5	Modified 8015B v2:1996 method for the determination of solvent Extractable Petroleum Hydrocarbons (EPH) within the range C8-C40 by GCFID. For waters the solvent extracts dissolved phase plus a sheen if present.	PM8/PM16	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required/Fractionation into aliphatic and aromatic fractions using a Rapid Trace SPE.	Yes		AR	Yes
TM5/TM36	please refer to TM5 and TM36 for method details	PM8/PM12/PM16	please refer to PM8/PM16 and PM12 for method details			AR	Yes
TM17	Modified US EPA method 8270D v5:2014. Determination of specific Polychlorinated Biphenyl congeners by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.	Yes		AR	Yes
TM20	Modified BS 1377-3:1990/USEPA 160.1/3 (TDS/TS: 1971) Gravimetric determination of Total Dissolved Solids/Total Solids	PM0	No preparation is required.	Yes		AR	Yes
TM21	Modified BS 7755-3:1995, ISO10694:1995 Determination of Total Organic Carbon or Total Carbon by combustion in an Eltra TOC furnace/analyser in the presence of oxygen. The CO2 generated is quantified using infra-red detection. Organic Matter (SOM) calculated as per EA MCERTS Chemical Testing of Soil, March 2012 v4.	PM24	Dried and ground solid samples are washed with hydrochloric acid, then rinsed with deionised water to remove the mineral carbon before TOC analysis.	Yes		AD	Yes

EMT Job No: 20/14656

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
TM22	Modified BS1377-3:1990 Gravimetric determination of Loss on Ignition by temperature controlled Muffle Furnace (35C-440C). On request modified ASTM D2974-00 LOI (105C-440C)	PM0	No preparation is required.	Yes		AD	Yes
TM26	Determination of phenols by Reversed Phased High Performance Liquid Chromatography and Electro-Chemical Detection.	PM0	No preparation is required.			AR	Yes
TM26	Determination of phenols by Reversed Phased High Performance Liquid Chromatography and Electro-Chemical Detection.	PM21B	As Received samples are extracted in Methanol: Water (60:40) by reciprocal shaker.	Yes		AR	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM15	Acid digestion of dried and ground solid samples using Aqua Regia refluxed at 112.5 °C. Samples containing asbestos are not dried and ground.			AD	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM15	Acid digestion of dried and ground solid samples using Aqua Regia refluxed at 112.5 °C. Samples containing asbestos are not dried and ground.	Yes		AD	Yes
TM30	Determination of Trace Metals by ICP-OES (Inductively Coupled Plasma – Optical Emission Spectrometry): WATERS by Modified USEPA Method 200.7, Rev. 4.4, 1994; Modified EPA Method 6010B, Rev.2, Dec 1996; Modified BS EN ISO 11885:2009: SOILS by Modified USEP	PM17	Modified method BS EN12457-2:2002 As received solid samples are leached with water in a 10:1 water to soil ratio for 24 hours, the moisture content of the sample is included in the ratio.	Yes		AR	Yes
TM36	Modified US EPA method 8015B v2:1996. Determination of Gasoline Range Organics (GRO) in the carbon chain range of C4-12 by headspace GC-FID. MTBE by GCFID co-elutes with 3-methylpentane if present and therefore can give a false positive. Positive MTBE results will be re-run using GC-MS to double check, when requested.	PM12	Modified US EPA method 5021A v2:2014. Preparation of solid and liquid samples for GC headspace analysis.			AR	Yes
TM36	Modified US EPA method 8015B v2:1996. Determination of Gasoline Range Organics (GRO) in the carbon chain range of C4-12 by headspace GC-FID. MTBE by GCFID co-elutes with 3-methylpentane if present and therefore can give a false positive. Positive MTBE results will be re-run using GC-MS to double check, when requested.	PM12	Modified US EPA method 5021A v2:2014. Preparation of solid and liquid samples for GC headspace analysis.	Yes		AR	Yes
TM38	Soluble Ion analysis using Discrete Analyser. CERTIFICATE OF ANALYSIS

ANALYSIS REQUESTED BY: O'Connor Sutton Cronin
9 Prussia Street
Stoneybatter
Dublin 7
Ireland

CONTRACT NO: (see comments)

DATE OF ISSUE: 06.11.20

DATE SAMPLES RECEIVED: 22.09.20 – 26.10.20

DATE ANALYSIS COMPLETED: 29.09.20

DESCRIPTION: Two-hundred and sixteen soil/loose aggregate samples each weighing approximately 0.1-1.6kg.

ANALYSIS REQUESTED: Qualitative and quantitative analysis of soil/loose aggregate samples for mass determination of asbestos.

METHODS:

Qualitative - The samples were analysed qualitatively for asbestos by polarised light and dispersion staining as described by the Health and Safety Executive in HSG 248.

Quantitative - The analysis was carried out using our documented in-house method based on HSE Contract Research Report No. 83/1996: Development and Validation of an analytical method to determine the amount of asbestos in soils and loose aggregates (Davies *et al*, 1996) and HSG 248. Our method includes initial examination of the entire sample, detailed analysis of a representative sub-sample and quantification by hand picking/weighing and/or fibre counting/sizing as appropriate.

RESULTS:

Initial Screening

Asbestos was detected in two of the soil samples by stereo-binocular and polarised light microscopy.

A summary of the qualitative and quantitative results are given in Tables 1 & 2 respectively.

CERTIFICATE OF ANALYSIS

Replacement for IOM certificate S15228

ANALYSIS REQUESTED BY: Ground Investigations Ireland
Catherinestown House
Hazelhatch Road
Newcastle
Co. Dublin

CONTRACT NO: S15228-R1

DATE OF ISSUE: 24.11.20

DATE SAMPLES RECEIVED: 04.11.20

DATE ANALYSIS COMPLETED: 11.11.20

DESCRIPTION: Eight soil/loose aggregate samples each weighing approximately 1.1-1.6kg.

ANALYSIS REQUESTED: Qualitative and quantitative analysis of soil/loose aggregate samples for mass determination of asbestos.

METHODS:

Qualitative - The samples were analysed qualitatively for asbestos by polarised light and dispersion staining as described by the Health and Safety Executive in HSG 248.

Quantitative - The analysis was carried out using our documented in-house method based on HSE Contract Research Report No. 83/1996: Development and Validation of an analytical method to determine the amount of asbestos in soils and loose aggregates (Davies *et al*, 1996) and HSG 248. Our method includes initial examination of the entire sample, detailed analysis of a representative sub-sample and quantification by hand picking/weighing and/or fibre counting/sizing as appropriate.

RESULTS:

Initial Screening

No asbestos was detected in any of the soil samples by stereo-binocular and polarised light microscopy.

A summary of the results is given in Table 1.

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.00828%)

Classification of sample: WS01-16/09/2020-1.00-2.00m

Non Hazardous Waste
Classified as **17 05 04**

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.0176%)

Classification of sample: WS09-16/09/2020-1.00-2.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.0222%)

Classification of sample: WS02-16/09/2020-2.50-2.75m

Non Hazardous Waste

Key

	User supplied data
	Determinand values ignored for classification, see column 'Conc. Not Used' for reason
	Determinand defined or amended by HazWasteOnline (see Appendix A)
	Speciated Deteminand - Unless the Determinand is Note 1, the Conversion Factor is used to calculate the compound concentration
<LOD	Below limit of detection
ND	Not detected
CLP: Note 1	Only the metal concentration has been used for classification

Appendix A: Classifier defined and non CLP determinands

barium sulfate (EC Number: 231-784-4, CAS Number: 7727-43-7)

Conversion factor: 1.7
Description/Comments: No hazard statements
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/89983 Sigma Aldrich SDS dated 15/4/19
Data source date: 02 Apr 2020
Hazard Statements: None.

chromium(III) oxide (worst case) (EC Number: 215-160-9, CAS Number: 1308-38-9)

Conversion factor: 1.462
Description/Comments: Data from C&L Inventory Database
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/33806
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H332 , Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Resp. Sens. 1 H334 , Skin Sens. 1 H317 , Repr. 1B H360FD , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

acenaphthylene (EC Number: 205-917-1, CAS Number: 208-96-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H302 , Acute Tox. 1 H330 , Acute Tox. 1 H310 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315

acenaphthene (EC Number: 201-469-6, CAS Number: 83-32-9)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Aquatic Chronic 2 H411

fluorene (EC Number: 201-695-5, CAS Number: 86-73-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

phenanthrene (EC Number: 201-581-5, CAS Number: 85-01-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Carc. 2 H351 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Skin Irrit. 2 H315

anthracene (EC Number: 204-371-1, CAS Number: 120-12-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

fluoranthene (EC Number: 205-912-4, CAS Number: 206-44-0)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

pyrene (EC Number: 204-927-3, CAS Number: 129-00-0)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 2014
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Skin Irrit. 2 H315 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **indeno[123-cd]pyrene** (EC Number: 205-893-2, CAS Number: 193-39-5)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Carc. 2 H351

- **benzo[ghi]perylene** (EC Number: 205-883-8, CAS Number: 191-24-2)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 28/02/2015
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 23 Jul 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

- **coronene** (EC Number: 205-881-7, CAS Number: 191-07-1)

Description/Comments: Data from C&L Inventory Database; no entries in Registered Substances or Pesticides Properties databases; SDS: Sigma Aldrich, 1907/2006 compliant, dated 2012 - no entries; IARC – Group 3, not carcinogenic.
Data source:
http://clp-inventory.echa.europa.eu/SummaryOfClassAndLabelling.aspx?SubstanceID=17010&HarmOnly=no?fc=true&lang=en
Data source date: 16 Jun 2014
Hazard Statements: STOT SE 2 H371

- **ethylbenzene** (EC Number: 202-849-4, CAS Number: 100-41-4)

CLP index number: 601-023-00-4
Description/Comments:
Data source: Commission Regulation (EU) No 605/2014 – 6th Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP6)
Additional Hazard Statement(s): Carc. 2 H351
Reason for additional Hazards Statement(s):
03 Jun 2015 - Carc. 2 H351 hazard statement sourced from: IARC Group 2B (77) 2000

- **polychlorobiphenyls; PCB** (EC Number: 215-648-1, CAS Number: 1336-36-3)

CLP index number: 602-039-00-4
Description/Comments: Worst Case: IARC considers PCB Group 1; Carcinogenic to humans; POP specific threshold from ATP1 (Regulation 756/2010/EU) to POPs Regulation (Regulation 850/2004/EC). Where applicable, the calculation method laid down in European standards EN 12766-1 and EN 12766-2 shall be applied.
Data source: Regulation 1272/2008/EC - Classification, labelling and packaging of substances and mixtures. (CLP)
Additional Hazard Statement(s): Carc. 1A H350
Reason for additional Hazards Statement(s):
29 Sep 2015 - Carc. 1A H350 hazard statement sourced from: IARC Group 1 (23, Sup 7, 100C) 2012

- **pH** (CAS Number: PH)

Description/Comments: Appendix C4
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: None.

- **salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex**

CLP index number: 006-007-00-5
Description/Comments: Conversion factor based on a worst case compound: sodium cyanide
Data source: Commission Regulation (EC) No 790/2009 - 1st Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP1)
Additional Hazard Statement(s): EUH032 >= 0.2 %
Reason for additional Hazards Statement(s):
14 Dec 2015 - EUH032 >= 0.2 % hazard statement sourced from: WM3, Table C12.2

- **TPH (C6 to C40) petroleum group** (CAS Number: TPH)

Description/Comments: Hazard statements taken from WM3 1st Edition 2015; Risk phrases: WM2 3rd Edition 2013
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: Flam. Liq. 3 H226 , Asp. Tox. 1 H304 , STOT RE 2 H373 , Muta. 1B H340 , Carc. 1B H350 , Repr. 2 H361d , Aquatic Chronic 2 H411

Appendix B: Rationale for selection of metal species

antimony {antimony compounds, with the exception of the tetroxide (Sb2O4), pentoxide (Sb2O5), trisulphide (Sb2S3), pentasulphide (Sb2S5) and those specified elsewhere in this Annex}

Worst case species based on risk phrases

arsenic {arsenic trioxide}

Worst case species based on Hazard Statement.

barium {barium sulfate}

conservative

cadmium {cadmium sulfide}

Worst case species based on Hazard Statements.

copper {copper(II) oxide}

Reasonable

chromium in chromium(III) compounds {chromium(III) oxide (worst case)}

oxide conversion factor included

chromium in chromium(VI) compounds {chromium(VI) oxide}

most conservative

lead {lead chromate}

Worst case species based on Hazard Statements.

mercury {mercury dichloride}

Worst case species based on Hazard Statements.

molybdenum {molybdenum(VI) oxide}

Worst case species based on Hazard Statements.

nickel {nickel dihydroxide}

Worst case species based on Hazard Statements.

selenium {selenium compounds with the exception of cadmium sulphoselenide and those specified elsewhere in this Annex}

Worst case species based on Hazard Statements.

zinc {zinc oxide}

Concentrations of chromium VI insufficient for zinc chormate to be present.

boron {diboron trioxide; boric oxide}

Reasonable

cyanides {salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex}

Worst case species

Appendix C: Version

HazWasteOnline Classification Engine: WM3 1st Edition v1.1, May 2018
HazWasteOnline Classification Engine Version: 2020.289.4500.8764 (15 Oct 2020)
HazWasteOnline Database: 2020.290.4501.8765 (16 Oct 2020)

This classification utilises the following guidance and legislation:
WM3 v1.1 - Waste Classification - 1st Edition v1.1 - May 2018
CLP Regulation - Regulation 1272/2008/EC of 16 December 2008
1st ATP - Regulation 790/2009/EC of 10 August 2009
2nd ATP - Regulation 286/2011/EC of 10 March 2011
3rd ATP - Regulation 618/2012/EU of 10 July 2012
4th ATP - Regulation 487/2013/EU of 8 May 2013
Correction to 1st ATP - Regulation 758/2013/EU of 7 August 2013
5th ATP - Regulation 944/2013/EU of 2 October 2013
6th ATP - Regulation 605/2014/EU of 5 June 2014
WFD Annex III replacement - Regulation 1357/2014/EU of 18 December 2014
Revised List of Wastes 2014 - Decision 2014/955/EU of 18 December 2014
7th ATP - Regulation 2015/1221/EU of 24 July 2015
8th ATP - Regulation (EU) 2016/918 of 19 May 2016
9th ATP - Regulation (EU) 2016/1179 of 19 July 2016
10th ATP - Regulation (EU) 2017/776 of 4 May 2017
HP14 amendment - Regulation (EU) 2017/997 of 8 June 2017
13th ATP - Regulation (EU) 2018/1480 of 4 October 2018
14th ATP - Regulation (EU) 2020/217 of 4 October 2019
15th ATP - Regulation (EU) 2020/1182 of 19 May 2020
POPs Regulation 2004 - Regulation 850/2004/EC of 29 April 2004
1st ATP to POPs Regulation - Regulation 756/2010/EU of 24 August 2010
2nd ATP to POPs Regulation - Regulation 757/2010/EU of 24 August 2010

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.00578%)

Classification of sample: WS10-17/09/2020-3.00-3.40m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Sample details

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.0153%)

Classification of sample: WS04-17/09/2020-1.00-2.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Sample details

Sample Name:
WS04-17/09/2020-1.00-2.00m
Moisture content:
13.1%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 04 (Soil and stones other than those mentioned in 17 05 03)

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Sample details

Sample Name:
WS04-17/09/2020-3.00-3.40m
Moisture content:
9.3%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 04 (Soil and stones other than those mentioned in 17 05 03)

Hazard properties

None identified

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.00638%)

Classification of sample: WS15-18/09/2020-1.00-2.00m

Non Hazardous Waste

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.00725%)

Classification of sample: WS18-18/09/2020-1.00-2.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Supplementary Hazardous Property Information

HP 3(i): Flammable "flammable liquid waste: liquid waste having a flash point below 60°C or waste gas oil, diesel and light heating oils having a flash point > 55°C and <= 75°C"

Force this Hazardous property to non hazardous because Concentrations too low to be flammable. No evidence of free draining hydrocarbon liquid.

Hazard Statements hit:

Flam. Liq. 3; H226 "Flammable liquid and vapour."

Because of determinand:

TPH (C6 to C40) petroleum group: (conc.: 0.0141%)

Classification of sample: WS17-18/09/2020-1.00-2.00m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Key

	User supplied data
	Determinand values ignored for classification, see column 'Conc. Not Used' for reason
	Determinand defined or amended by HazWasteOnline (see Appendix A)
	Speciated Deteminand - Unless the Determinand is Note 1, the Conversion Factor is used to calculate the compound concentration
<LOD	Below limit of detection
ND	Not detected
CLP: Note 1	Only the metal concentration has been used for classification

Appendix A: Classifier defined and non CLP determinands

barium sulfate (EC Number: 231-784-4, CAS Number: 7727-43-7)

Conversion factor: 1.7
Description/Comments: No hazard statements
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/89983 Sigma Aldrich SDS dated 15/4/19
Data source date: 02 Apr 2020
Hazard Statements: None.

chromium(III) oxide (worst case) (EC Number: 215-160-9, CAS Number: 1308-38-9)

Conversion factor: 1.462
Description/Comments: Data from C&L Inventory Database
Data source: https://echa.europa.eu/information-on-chemicals/cl-inventory-database/-/discli/details/33806
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H332 , Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Resp. Sens. 1 H334 , Skin Sens. 1 H317 , Repr. 1B H360FD , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

acenaphthylene (EC Number: 205-917-1, CAS Number: 208-96-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Acute Tox. 4 H302 , Acute Tox. 1 H330 , Acute Tox. 1 H310 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315

acenaphthene (EC Number: 201-469-6, CAS Number: 83-32-9)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Aquatic Chronic 2 H411

fluorene (EC Number: 201-695-5, CAS Number: 86-73-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

phenanthrene (EC Number: 201-581-5, CAS Number: 85-01-8)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Carc. 2 H351 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410 , Skin Irrit. 2 H315

anthracene (EC Number: 204-371-1, CAS Number: 120-12-7)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 17 Jul 2015
Hazard Statements: Eye Irrit. 2 H319 , STOT SE 3 H335 , Skin Irrit. 2 H315 , Skin Sens. 1 H317 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

fluoranthene (EC Number: 205-912-4, CAS Number: 206-44-0)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Acute Tox. 4 H302 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

pyrene (EC Number: 204-927-3, CAS Number: 129-00-0)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 2014
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 21 Aug 2015
Hazard Statements: Skin Irrit. 2 H315 , Eye Irrit. 2 H319 , STOT SE 3 H335 , Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

indeno[123-cd]pyrene (EC Number: 205-893-2, CAS Number: 193-39-5)

Description/Comments: Data from C&L Inventory Database
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 06 Aug 2015
Hazard Statements: Carc. 2 H351

benzo[ghi]perylene (EC Number: 205-883-8, CAS Number: 191-24-2)

Description/Comments: Data from C&L Inventory Database; SDS Sigma Aldrich 28/02/2015
Data source: http://echa.europa.eu/web/guest/information-on-chemicals/cl-inventory-database
Data source date: 23 Jul 2015
Hazard Statements: Aquatic Acute 1 H400 , Aquatic Chronic 1 H410

coronene (EC Number: 205-881-7, CAS Number: 191-07-1)

Description/Comments: Data from C&L Inventory Database; no entries in Registered Substances or Pesticides Properties databases; SDS: Sigma Aldrich, 1907/2006 compliant, dated 2012 - no entries; IARC – Group 3, not carcinogenic.
Data source:
http://clp-inventory.echa.europa.eu/SummaryOfClassAndLabelling.aspx?SubstanceID=17010&HarmOnly=no?fc=true&lang=en
Data source date: 16 Jun 2014
Hazard Statements: STOT SE 2 H371

ethylbenzene (EC Number: 202-849-4, CAS Number: 100-41-4)

CLP index number: 601-023-00-4
Description/Comments:
Data source: Commission Regulation (EU) No 605/2014 – 6th Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP6)
Additional Hazard Statement(s): Carc. 2 H351
Reason for additional Hazards Statement(s):
03 Jun 2015 - Carc. 2 H351 hazard statement sourced from: IARC Group 2B (77) 2000

polychlorobiphenyls; PCB (EC Number: 215-648-1, CAS Number: 1336-36-3)

CLP index number: 602-039-00-4
Description/Comments: Worst Case: IARC considers PCB Group 1; Carcinogenic to humans; POP specific threshold from ATP1 (Regulation 756/2010/EU) to POPs Regulation (Regulation 850/2004/EC). Where applicable, the calculation method laid down in European standards EN 12766-1 and EN 12766-2 shall be applied.
Data source: Regulation 1272/2008/EC - Classification, labelling and packaging of substances and mixtures. (CLP)
Additional Hazard Statement(s): Carc. 1A H350
Reason for additional Hazards Statement(s):
29 Sep 2015 - Carc. 1A H350 hazard statement sourced from: IARC Group 1 (23, Sup 7, 100C) 2012

pH (CAS Number: PH)

Description/Comments: Appendix C4
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: None.

salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex

CLP index number: 006-007-00-5
Description/Comments: Conversion factor based on a worst case compound: sodium cyanide
Data source: Commission Regulation (EC) No 790/2009 - 1st Adaptation to Technical Progress for Regulation (EC) No 1272/2008. (ATP1)
Additional Hazard Statement(s): EUH032 >= 0.2 %
Reason for additional Hazards Statement(s):
14 Dec 2015 - EUH032 >= 0.2 % hazard statement sourced from: WM3, Table C12.2

TPH (C6 to C40) petroleum group (CAS Number: TPH)

Description/Comments: Hazard statements taken from WM3 1st Edition 2015; Risk phrases: WM2 3rd Edition 2013
Data source: WM3 1st Edition 2015
Data source date: 25 May 2015
Hazard Statements: Flam. Liq. 3 H226 , Asp. Tox. 1 H304 , STOT RE 2 H373 , Muta. 1B H340 , Carc. 1B H350 , Repr. 2 H361d , Aquatic Chronic 2 H411

Appendix B: Rationale for selection of metal species

antimony {antimony compounds, with the exception of the tetroxide (Sb2O4), pentoxide (Sb2O5), trisulphide (Sb2S3), pentasulphide (Sb2S5) and those specified elsewhere in this Annex}

Worst case species based on risk phrases

arsenic {arsenic trioxide}

Worst case species based on Hazard Statement.

barium {barium sulfate}

conservative

cadmium {cadmium sulfide}

Worst case species based on Hazard Statements.

copper {copper(II) oxide}

Reasonable

chromium in chromium(III) compounds {chromium(III) oxide (worst case)}

oxide conversion factor included

chromium in chromium(VI) compounds {chromium(VI) oxide}

most conservative

lead {lead chromate}

Worst case species based on Hazard Statements.

mercury {mercury dichloride}

Worst case species based on Hazard Statements.

molybdenum {molybdenum(VI) oxide}

Worst case species based on Hazard Statements.

nickel {nickel dihydroxide}

Worst case species based on Hazard Statements.

selenium {selenium compounds with the exception of cadmium sulphoselenide and those specified elsewhere in this Annex}

Worst case species based on Hazard Statements.

zinc {zinc oxide}

Concentrations of chromium VI insufficient for zinc chormate to be present.

boron {diboron trioxide; boric oxide}

Reasonable

cyanides {salts of hydrogen cyanide with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide and those specified elsewhere in this Annex}

Worst case species

Appendix C: Version

HazWasteOnline Classification Engine: WM3 1st Edition v1.1, May 2018
HazWasteOnline Classification Engine Version: 2020.289.4500.8764 (15 Oct 2020)
HazWasteOnline Database: 2020.290.4501.8765 (16 Oct 2020)

This classification utilises the following guidance and legislation:
WM3 v1.1 - Waste Classification - 1st Edition v1.1 - May 2018
CLP Regulation - Regulation 1272/2008/EC of 16 December 2008
1st ATP - Regulation 790/2009/EC of 10 August 2009
2nd ATP - Regulation 286/2011/EC of 10 March 2011
3rd ATP - Regulation 618/2012/EU of 10 July 2012
4th ATP - Regulation 487/2013/EU of 8 May 2013
Correction to 1st ATP - Regulation 758/2013/EU of 7 August 2013
5th ATP - Regulation 944/2013/EU of 2 October 2013
6th ATP - Regulation 605/2014/EU of 5 June 2014
WFD Annex III replacement - Regulation 1357/2014/EU of 18 December 2014
Revised List of Wastes 2014 - Decision 2014/955/EU of 18 December 2014
7th ATP - Regulation 2015/1221/EU of 24 July 2015
8th ATP - Regulation (EU) 2016/918 of 19 May 2016
9th ATP - Regulation (EU) 2016/1179 of 19 July 2016
10th ATP - Regulation (EU) 2017/776 of 4 May 2017
HP14 amendment - Regulation (EU) 2017/997 of 8 June 2017
13th ATP - Regulation (EU) 2018/1480 of 4 October 2018
14th ATP - Regulation (EU) 2020/217 of 4 October 2019
15th ATP - Regulation (EU) 2020/1182 of 19 May 2020
POPs Regulation 2004 - Regulation 850/2004/EC of 29 April 2004
1st ATP to POPs Regulation - Regulation 756/2010/EU of 24 August 2010
2nd ATP to POPs Regulation - Regulation 757/2010/EU of 24 August 2010

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Sample details

Sample Name:
WS 22-21/09/2020-0.00-1.00m
Moisture content:
13.2%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 04 (Soil and stones other than those mentioned in 17 05 03)

Hazard properties

None identified

Classification of sample: WS 22-21/09/2020-3.00-3.40m

Non Hazardous Waste
Classified as **17 05 04**
in the List of Waste

Sample details

Sample Name:
WS 22-21/09/2020-3.00-3.40m
Moisture content:
9.1%
(wet weight correction)

LoW Code:
Chapter: 17: Construction and Demolition Wastes (including excavated soil from contaminated sites)
Entry: 17 05 04 (Soil and stones other than those mentioned in 17 05 03)

Hazard properties

None identified
