1 INTRODUCTION

1.1 BACKGROUND

This Residential Travel Plan (RTP) has been prepared by Stephen Reid Consulting Traffic and Transportation on behalf of The Iveagh Trust for submission to Dublin City Council (DCC) in support of the following proposed development:

The Iveagh Trust intend to apply to Dublin City Council for permission for a Large Scale Residential Development on a site of c.0.358 ha at 43- 50 Dolphins Barn Street, Dublin 8.

The site is bound by Dolphin's Barn Street to the east, No. 51 Dolphin's Barn Street to the northeast, No. 7 Poole Terrace to the south and boundaries of rear gardens of the residential properties located on Reuben Street and Emerald Square to the west and north of the application site respectively. The proposed development consists of the following:

- *The demolition of all existing buildings on site (comprising the former factory building to the rear of the site and buildings which front onto Dolphin's Barn Street (No's 43-50)), which have a total gross floor area of c.3,243.5 sqm.*
- *The construction of a 1-9 storey Large Scale Residential Development (LRD) comprising 119 no. apartments (70 no. 1 bed units and 49 no. 2 bed units) and a community hub space at ground floor level totalling c.523.5 sqm.*
- *All apartments are provided with balconies/terraces, which are located on the eastern, western, southern and northern elevations of the building.*
- *The proposal includes external communal open space areas (c.707 sqm) at ground floor level, and provision of PV panels at roof level.*
- *The proposal provides a total of 15 no. car parking spaces (12 no. for residents, 2 no. for the community hub, including 1 no. accessible parking space, and 1 no. car sharing space). 172 no. cycle parking spaces are provided for residents, and 60 no. cycle parking spaces are provided for visitors to the residential element of the development. 2 no. long stay cycle parking spaces, and 6 no. short stay cycle parking spaces are provided associated with the community hub element of the development.*
- *The proposal includes for alterations and upgrade of the site boundary walls / treatment.*
- *The proposal includes 1 no. shared pedestrian/ vehicular entrance point from Dolphin's Barn Street, alterations to the public footpath/street along Dolphins Barn Street, the provision of 2 no. ESB sub-station's, plant and storage rooms, a comms room, a LV switch room, a life safety room, bin stores and all associated and ancillary works.*
- *The associated site and infrastructural works include provision for water services; foul and surface water drainage and connections; attenuation proposals; permeable paving; all landscaping works including hard and soft landscaping; blue/green roofs; boundary treatment; internal roads and footpaths; electrical services; and all associated site development works above and below ground.*

It is intended that the completed scheme will be operated and managed by The Iveagh Trust who will select appropriate tenants from the housing list to live in the development.

The strategy for this LRD application has regard for a previous SHD scheme on this site and the planning assessment and issues which were considered in that previous scheme, and in the LRD consultation process for this application.

The site location is shown in the following Figure 1.1.

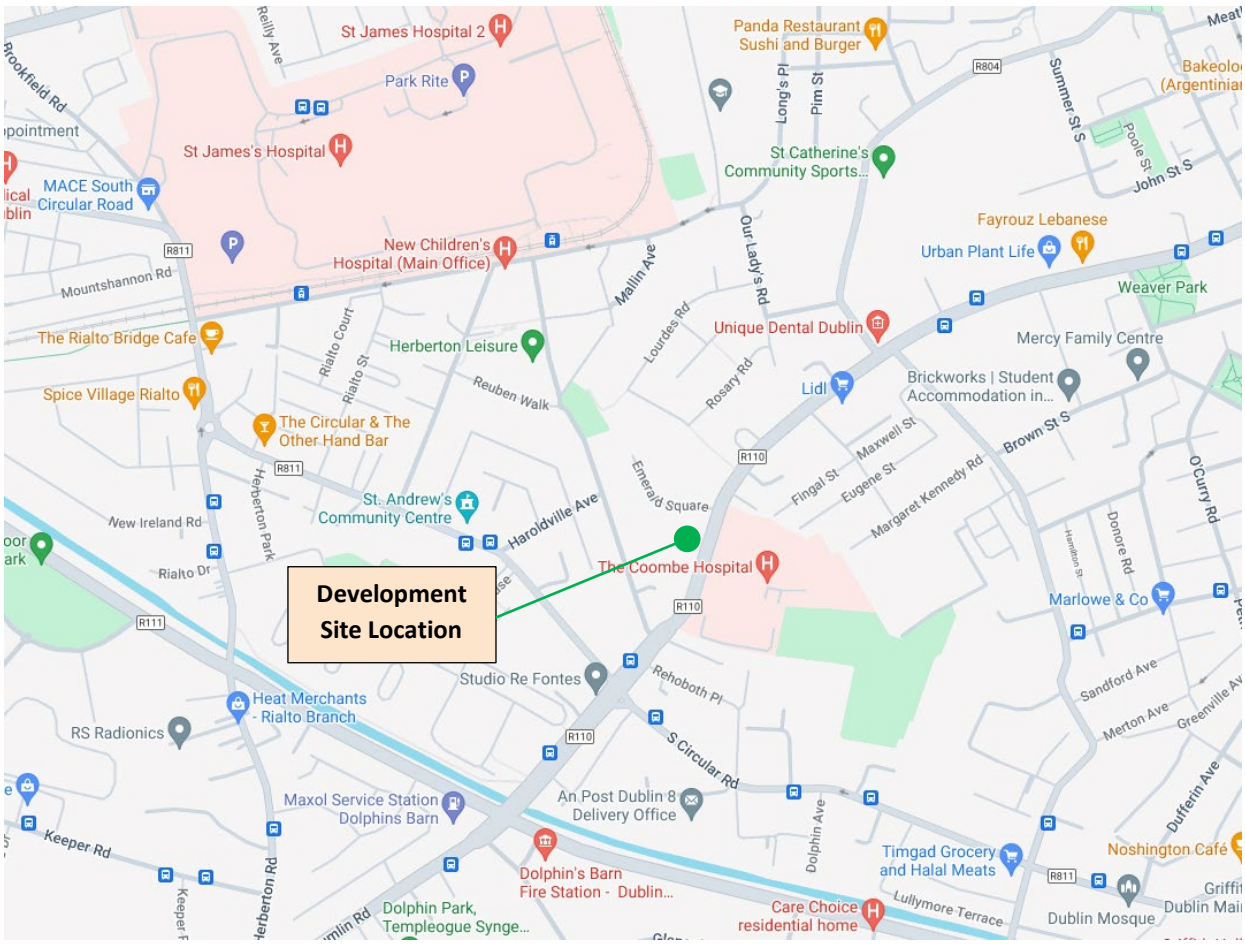

Figure 1.1 Development Site Location (Source: www.google.ie/maps)

To complete this report, reference is made to the following documents:

- The Dublin City Development Plan 2022-2028 (DCC);
- NTA Guidance Documents on Travel Plans (NTA);
- Design Manual for Urban Roads and Streets, Updated 2019, and associated DMURS Advice Notes (Dept. of Transport, Tourism and Sport/Dept. of Environment, Community & Local Government);
- Sustainable Urban Housing: Design Standards for New Apartments December 2020 (Dept of Housing, Local Government & Heritage)
- Making Residential Travel Plans Work 2007 (Dept of Transport, UK)
- Cycle Design Manual (NTA)
- Dublin City Centre Transport Plan 2023 (DCC/NTA)

1.2 Policy Background

National Sustainable Mobility Policy

The National Sustainable Mobility Policy sets out a strategic framework to 2030 for active travel (walking and cycling) and public transport journeys to help Ireland meet its climate obligations. It is accompanied by an action plan to 2025 which contains actions to improve and expand sustainable mobility options across the country by providing safe, green, accessible and efficient alternatives to car journeys. It also includes demand management and behavioural change measures to manage daily travel demand more efficiently and to reduce the journeys taken by private car.

The policy aims to deliver at least 500,000 additional daily active travel and public transport journeys by 2030 and a 10% reduction in the number of kilometres driven by fossil fuelled cars. It will make it easier for people to choose walking, cycling and use public transport daily instead of having to use a petrol or diesel car.

A collaborative approach has been taken by the department in developing the policy through public consultation and extensive stakeholder and cross-government engagement.

(source: https://www.gov.ie/en/publication/848df-national-sustainable-mobility-policy/)

Dublin City Development Plan 2022-2028

The site is located in DCC Zone 1 (light blue shaded section on Development Plan Map J), which has the lowest car parking standards for residential apartments (being a maximum allowance of 0.5 spaces/unit).

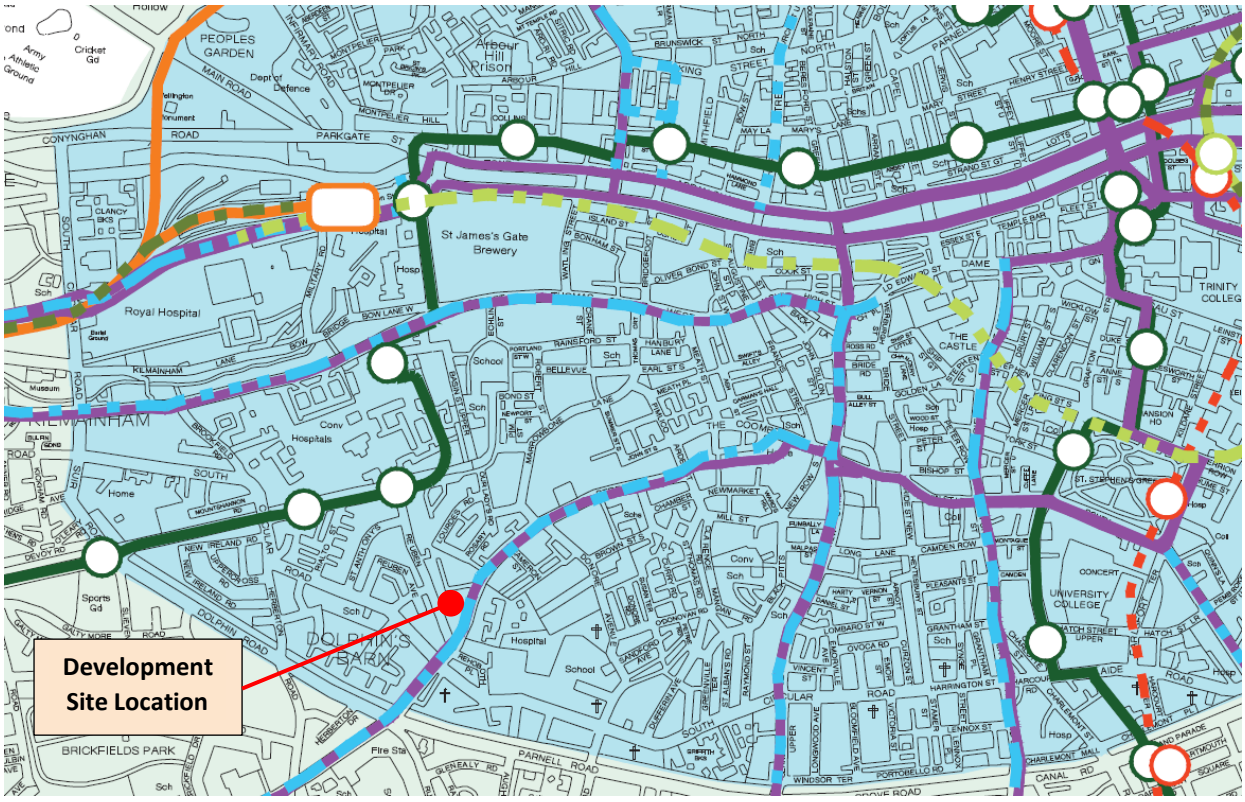

Figure 1.2 Development Location on Extract of Map J
(Source: Dublin City Development Plan 2022-2028)

The Development Plan notes:

A relaxation of maximum car parking standards will be considered in Zone 1 and Zone 2 for any site located within a highly accessible location.

Applicants must set out a clear case satisfactorily demonstrating a reduction of parking need for the development based on the following criteria:

- *Locational suitability and advantages of the site.*
- *Proximity to High Frequency Public Transport services (10 minutes' walk).*
- *Walking and cycling accessibility/permeability and any improvement to same.*
- *The range of services and sources of employment available within walking distance of the development.*
- *Availability of shared mobility.*
- *Impact on the amenities of surrounding properties or areas including overspill parking.*
- *Impact on traffic safety including obstruction of other road users.*
- *Robustness of Mobility Management Plan to support the development.*

These considerations are also set out in the SUH Apartment Standards.

The development will be operated and managed by The Iveagh Trust who are an Approved Housing Body (AHB). The allocation of resident car parking will be determined by The Iveagh Trust based on need and tenants will be selected on that basis, with 13 spaces allocated to residential users (including a car share space), and 2 spaces allocated to the community hub use (including a disabled accessible space).

This approach of limited parking provision is appropriate having regard to the high level of bus accessibility on the Dolphins Barn Street/Cork Street corridor which is to be further improved as part of the NTA BusConnects project, and the good provision of access to the Luas Red Line Fatima Stop, which is 650m from the site via Reuben Street, and with key employment sites and amenities within walking distance (including the Coombe Maternity Hospital and St James Hospital/National Children's Hospital campus).

In relation to cycle parking the standards are Minimum and requirements at Appendix 5, Volume 2 (Table 1) are as follows:

- 1 secure long stay space per bedroom and 1 short-stay/visitor space per 2 apartments.

The Development Plan sets out the following criteria for provision of cycle parking/storage.

"All new developments are required to fully integrate cycle facilities into the design and operation of the schemes, in accordance with Table 1.

Having regard to the Sustainable Urban Development: Guidelines for New Apartments (2020), cycle parking for residential apartment units shall be provided at a rate of 1 secure cycle parking space per residential bedroom and 1 visitor cycle parking space for every two units. Relaxations of this standard may be considered in certain instances where the applicant can justify the proposed quantum having regard to location, quality of facilities, flexibility for future enhancement / enlargement and availability of alternative transport facilities.

Secure cycle parking stations/facilities shall be provided in new public transport interchanges, Luas stops (in association with TII), Park and Ride facilities, office blocks, apartment blocks, shopping centres, hospitals, etc., in accordance with the standards set out in Table 1, unless otherwise agreed with the planning authority.

Secure bicycle parking stands shall be provided in all cases where bicycle parking is deemed to be necessary by the planning authority. Such cycle stands shall be within 25 m of a destination for short-term parking (shops) and within 50 m for long-term parking (school, college, office). All long-term (more than three hours) cycle stands shall be protected from the weather. Cyclists shall be able to secure both frame and wheels to the cycle parking stand.

All on-street cycle stands shall be capable of performing the basic functions of supporting the bicycle and protecting it against theft or vandalism. Off-street storage/parking facilities shall provide adequate shelter, lighting, safety and security, ease of access and egress, and an appropriate level of supervision. As such, publicly accessible cycle parking shall be of Sheffield stand type; toaster racks or similar are not acceptable for publicly accessible cycle parking. Where high density cycle parking is provided in a secure location, stacked/tiered cycle parking may be acceptable provided it is easily used and secure. Secure cycle compounds shall be provided where feasible and, in particular, in large office developments, multi-storey car parks and railway stations.

Guidance for selecting the most appropriate type of bicycle parking facility depending on location and user needs is outlined in the National Cycle Manual, 'Bicycle Parking Facilities'. Dublin City Council will have regard to this document when considering applications where bicycle parking is a requirement. Planning applications shall clearly demonstrate cycle parking capacity and user accessibility. It is an objective of this Plan over its lifetime (Objective SMT13) to develop a guidance document for the design and provision of cycle parking. All developments must outline how they comply with said guidance when completed."

The current requirements are per the NTA 'Cycle Design Manual' (formerly the National Cycle Manual) but there is a possibility that the DCC Guidance Document could be introduced during the planning assessment for this LRD scheme.

With regard to the City Development Plan referenced above and the SUH: New Apartments Standards there will be a provision of 172 long-stay cycle spaces, and 60 short-stay visitor cycle spaces.

For the community hub use, a separate allowance of 2 long stay cycle spaces (for staff) and 6 short-stay cycle spaces (for visitors) is provided within the development, with regard to the Development Plan minimum standards of 1 long stay per 5 staff and 1 short-stay per 100 sq. GFA.

2 EXISTING CONDITIONS

2.1 GENERAL AREA AND ROAD USER ACCESS

The site is on the south western side of Dublin City Centre, in the St James area of Dublin 8, with frontage onto the westernmost side of the R110 Dolphins Barn Street.

The site consists of 8 terraced buildings along Dolphin's Barn Street and a factory to the rear. The Dolphins Barn Street buildings, now vacant, range in height from two to four stories typically comprising ground floor commercial with residential on upper floors.

The factory site to the rear is occupied by vacant buildings and an electricity substation. The buildings mainly comprise a large double volume building block with saw tooth roof, divided into two spaces. The former factory site is served by an entrance at the southern end of the overall site from Dolphin's Barn Street. The building on Dolphin's Barn Street at the northern end of the site has access to the factory site.

The remainder of the buildings on Dolphin's Barn Street have no rear access and occupy sites with small rear garden/yard areas. The factory site is bounded by rear boundaries of adjoining largely residential properties.

The R110 extends from the southwest side of the City Centre core area (at St Stephens Green, which is 2km from the site via Kevin Street, St Lukes Avenue, Cork Street and Dolphins Barn Street), intersecting with the R811 South Circular Road (175m southwest of the site), and crossing the Grand Canal, where it intersects with the R111 Parnell Road (375m from the site), before continuing in a southwest heading via Crumlin Road and Drimnagh Road to the Long Mile Road.

Reuben Street (to the southwest of the site) is a local access street connecting Dolphins Barn Street to James Walk at its northernmost end (adjacent to St James Hospital and the Fatima Luas Stop, which is 650m walk from the site).

The R110 route in the vicinity of the site generally has one bus lane and one general traffic lane in each direction (with short turning lanes at certain junctions). There are on-road advisory cycle lanes on both sides of Dolphins Barn Street and Cork Street.

Along the site frontage there are several sections of inset parallel parking bays bracketed by street trees in kerbed footpath buildouts. The parking bays are public pay and display and permit bays during the parking control operational period of 07.00-19.00 (Monday-Friday), and subject to the Dublin City Council 'green' zone tariff.

There is a gated vehicle access through No.43 Dolphins Barn Street at the south end of the frontage and a roller shutter vehicle access at the north end of the frontage into No.50 Dolphins Barn Street, both of which have dropped kerb crossovers of the public footpath, with a 'gap' in the parallel parking in front of each identified by contrasting block paving and road markings/parking limit signage, although these are heavily worn/faded and as a result the no parking zones are generally parked on as the accesses have been unused for over 15 years.

The surrounding area is a mix of uses with The Coombe Maternity Hospital opposite the site and residential, community and employment development, and some local retail uses.

Figure 2.1 Existing Site and Surrounding Uses (source www.google.ie/maps)

2.2 Existing Cyclist and Pedestrian Facilities

Pedestrian and cycling catchment maps based on existing infrastructure are appended to this report. These indicate the significant population catchment within the 2km/15 minutes primary walking and 5km/15 minute primary cycling catchments of the development.

There is a good level of footpath provision in the area, and there is a controlled 'Toucan' crossing just beyond the northern end of the frontage, providing access across Dolphins Barn Street for cyclists and pedestrians, and facilitating access to the southbound bus stop in front of The Coombe Hospital. There is also a Toucan crossing 75m to the south of the development in front of the Earls Court development, and controlled pedestrian crossings at the crossroads with South Circular Road.

The side roads typically have dropped kerbs at in-line crossing points/desire lines, with some provision of tactile pavers and/or entry ramps to reduce traffic speeds.

There are traffic calming ramps along Reuben Street, which is a two-way single carriageway road with a 30kph SLOW ZONE speed limit. Both Reuben Street and Emerald Square (to the north of the site) have entry treatment ramps to assist pedestrians crossing these side roads when walking along the westernmost footpath of Dolphins Barn Street.

There is public street lighting provided on the site frontage and in the surrounding streets.

As noted in Section 2.1, there are on-road cycle lanes on Dolphins Barn Street and Cork Street. These were implemented as part of the South Clondalkin QBC project and in some sections of the route the cycle provision is combined with the bus lane.

There is also an on-road cycle lane provision along Parnell Road/Dolphin Road (following the south side of the Grand Canal), sections of cycle lane on Suir Road, and shared bus/cycle lane on South Circular Road.

On the surrounding local street network traffic conditions are generally conducive to unsegregated cycling and the speeds are limited throughout the area as part of an environmental traffic cell to 30kph.

There are several schemes running in Dublin City and the surrounding area. The interactive maps for DublinBikes and Bleeperbikes map currently show that these two schemes do not currently extend to the Dolphins Barn Street area, although there is provision at St James Hospital and in the northern area of The Liberties.

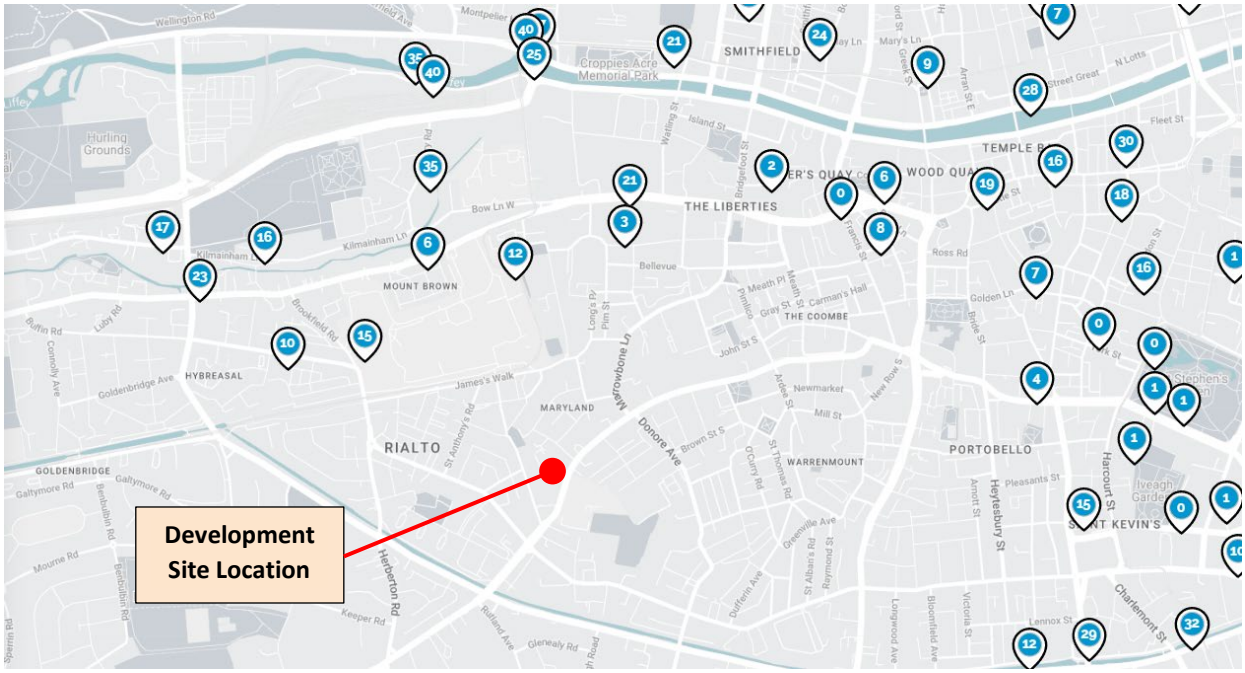

Figure 2.2 Existing DublinBikes Coverage in Dublin 8 Area (source www.google.ie/maps)

2.3 Existing Public Transport Accessibility and Services

Existing Services

The key operators in the Dublin City area are Dublin Bus and Go-Ahead who operate bus services for TFI, while Transdev operates the Luas for TII, with two lines (Red and Green) serving Dublin City.

On Dolphins Barn Street, the inbound buses stop 75m to the northeast of the development, and the outbound buses stop in front of The Coombe Hospital, so these are considered to be adjacent to the proposed development.

Bus Services on Dolphins Barn Street

The **No.27** is operated by Dublin Bus and follows a route between Clare Hall and Jobstown via the City Centre, with a daytime frequency of approximately every 10 minutes between services in both directions.

The **No.56A** is operated by Dublin Bus between The Square and Ringsend Road, with a daytime frequency of 75 minutes between services in both directions.

The **No.74** is operated by Dublin Bus between Dundrum and Eden Quay, with a daytime frequency of every 30 minutes between services, in both directions.

The **No.77A** is operated by Dublin Bus between Citywest and Ringsend Road, with a current daytime frequency of every 20 minutes between services in both directions.

The **No.151** is operated by Dublin Bus between The Docklands and Foxborough, with a daytime frequency of 20 minutes between services in both directions.

Therefore, there are 14-15 buses per hour in each direction passing the site on Dolphins Barn Street and stopping close to the LRD site.

Bus Services on South Circular Road

In addition to these services stopping on Dolphins Barn Street/Cork Street, there are stops on South Circular Road, a 250m walk from the LRD site, serviced by the **No.68/68A**, which is operated by Dublin Bus between Newcastle/Greenogue and Hawkins Street, with an hourly daytime frequency in each direction, and the No.122, operated by Dublin Bus which follows a route from between Drimnagh and Ashington via Aungier Street and Cabra, with a minimum daytime frequency of every 20 minutes in each direction.

The frequencies set out above are those during the interpeak period (between 10.00 and 16.00) and it is noted that most key routes operate with an increased frequency during the AM and PM peaks on weekdays.

Luas (Light Rail) Services a

The closest stop is at Fatima on the Red Line (this is a 650m walk from the development, via Rueben Street. The earliest stopping service in each direction are before 6am and last stopping services are just before 1am.

Capacity of Existing Public Transport Services

As requested by DCC in the pre-planning consultation process a review of existing capacity on public transport services within the catchment area has been provided. The approach is to identify routes serving bus stops within 400m (5 mins walk) of the LRD site, and Luas stops within 800m (10 mins walk) of the LRD site.

Using a previously accepted methodology used in similar LRD projects in the DCC area, SRC have identified the AM peak period capacity of the relevant services based on the number of stopping services in each direction for the period multiplied by the capacity of each vehicle (for double decker buses this is 91 ppv, while for the Red Luas tram this is taken as 319 ppv).

Bus Capacity

In total, there are 510 stopping services on Dolphins Barn Street each weekday (within 75m walk of the LRD site), and a further 165 stopping services on SCR to the east of the Dolphins Barn Street junction (within 275m walk of the LRD site).

Therefore, there are a total of 675 buses servicing these stops, which are all within a 275m walking catchment of the development site (with approximately 50:50 split between inbound and outbound services on each corridor).

Route No.	Stop	Inbound	Outbound	Serving City Centre
27	Dolphins Barn St (Coombe Hosp)	21	19	Yes
56a	Dolphins Barn St (Coombe Hosp)	3	3	Yes
77a	Dolphins Barn St (Coombe Hosp)	15	10	Yes
74	Dolphins Barn St (Coombe Hosp)	7	7	Yes
151	Dolphins Barn St (Coombe Hosp)	11	10	Yes
68/68a	SCR (Dolphins Barn Church)	6	3	Yes
122	SCR (Dolphins Barn Church)	14	15	Yes
	Total	77	67	
	Total Capacity on Bus Routes	7,007	6,097	

Table 2.1 Existing Bus Capacity Within 400m of the LRD Site (Weekday 07.00-10.00)

Luas Capacity

The Luas operating timetables identify the service at Fatima stop is a maximum frequency of every 3 minutes and an average frequency of every 4 minutes for the AM peak period between 07.00 and 10.00, equating to an average of 15 stopping services per hour each way.

Route No.	Stop	Inbound	Outbound	Serving City Centre
Red line	Fatima	45	45	Yes
	Total Capacity on Luas Red Line	14,355	14,355	

Table 2.2 Existing Luas Capacity Within 800m of the LRD Site (Weekday 07.00-10.00)

Capacity of Future Services (with Bus Connects)

Having regard to the planning process and likely timeframe for developing a site of this size, it is expected that the Bus Connects proposals for the R110 corridor along Dolphins Barn Street and Cork Street will have been implemented by the time the apartments are occupied.

Section 4a of the scheme is set out to be completed in Q3/Q4 of Year 1 of a 3 Year overall programme in the Construction Phasing Chapter of the EIS, and the overall Tallaght/Clondalkin to City Centre corridor will have been completed two years after this.

Therefore, it is likely there will be a period in the initial operating/occupied life of the completed LRD when the existing bus services routes are still operational, and this Plan should be updated when the changeover from the existing services to proposed BusConnects services has been completed.

For information, the key proposals are as set out in the following section with graphics from the NTA BusConnects website showing the current proposed routes and services.

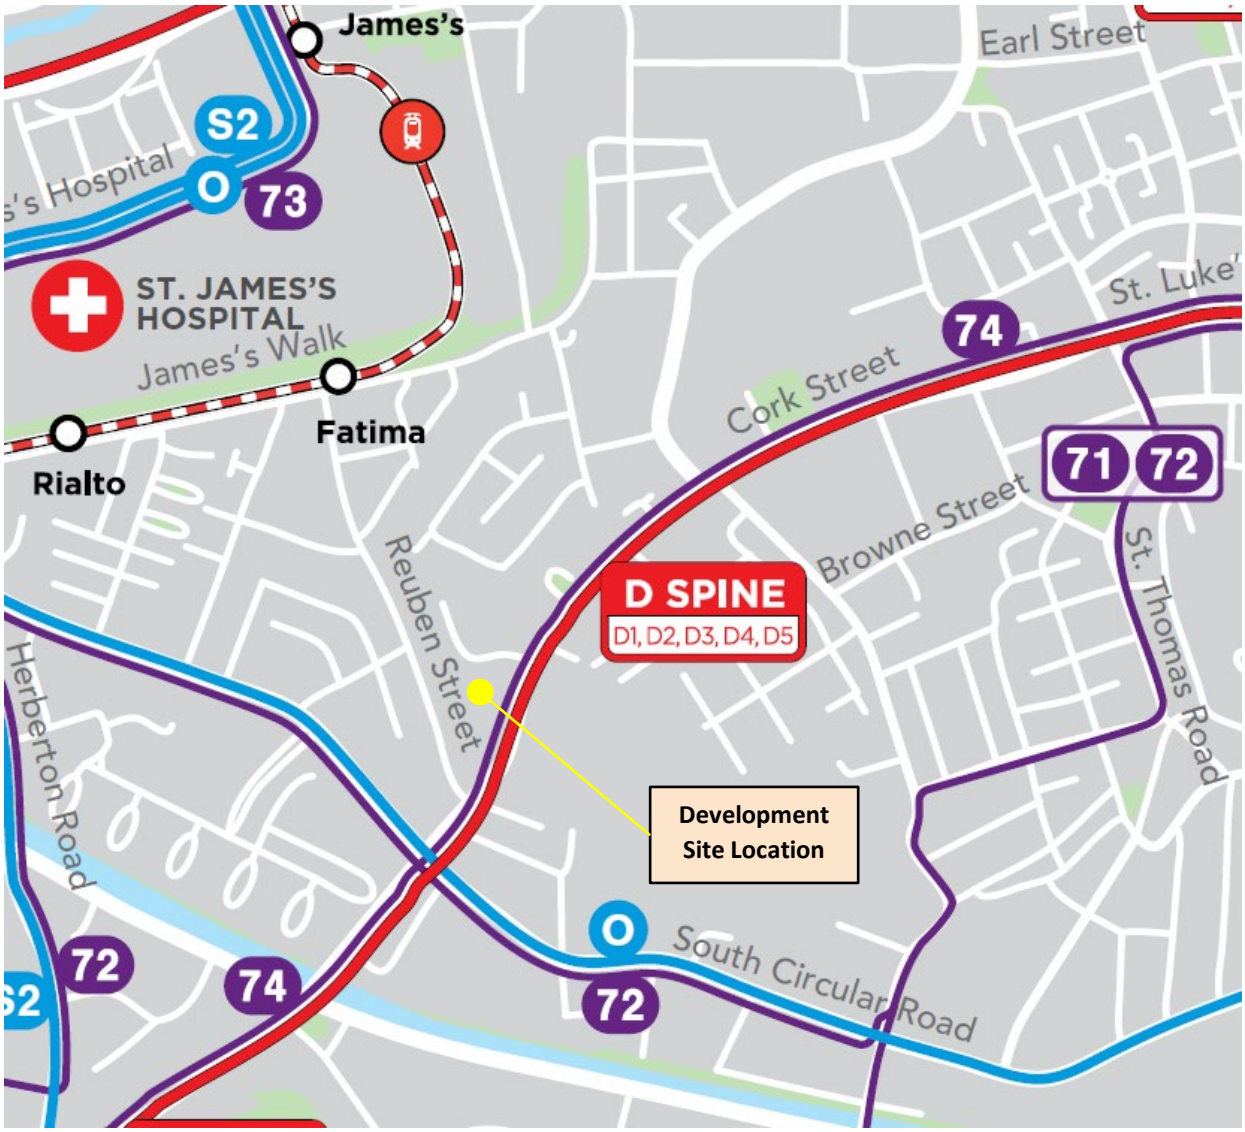

Figure 2.3 Proposed Bus Connects Network in Vicinity of Site (source: NTA BusConnects)

The Tallaght/Clondalkin to City Centre BusConnects corridor forms part of the D-Spine Route in the proposals (D1, D2, D3, D4 and D5 will all pass along this route – replacing several of the existing bus routes listed above), and will interconnect with the "O" route, an Inner Orbital route (using South Circular Road and North Circular Road). The "O" will have a proposed weekday daytime frequency of every 8 minutes.

At Walkinstown, the future D2, D4 and D5 turn southwest towards Tallaght while D1 and D3 will turn north on Walkinstown Avenue to Naas Road and then to Clondalkin.

The No. 74 (current service between Dundrum and Eden Quay) will continue to operate along this corridor between Dundrum and the City Centre. The No.72 on SCR will form a revised route encompassing parts of the existing No.122 and No.150 bus routes.

An additional bus stop for inbound services is proposed immediately to the south of the Reuben Street junction. It is considered that this will allow a distribution of the proposed inbound services between the existing stop to the north of Emerald Square and the proposed additional stop, during peak boarding periods which will occur in the AM peak period for inbound services towards Dublin City Centre.

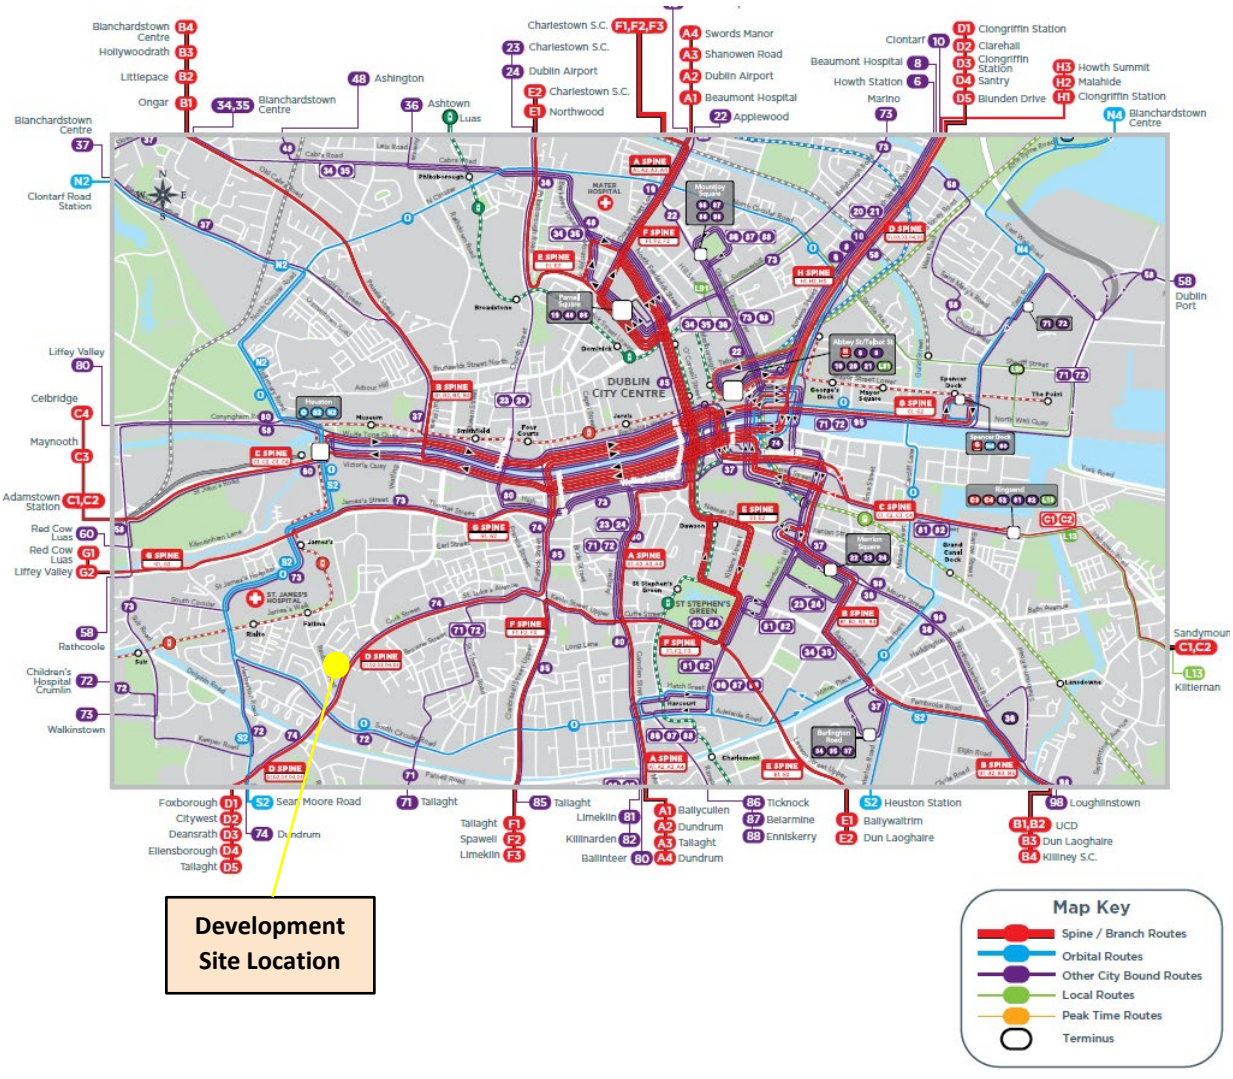

Figure 2.4 Proposed Bus Connects City Centre Network (source: NTA BusConnects)

From a review of existing operations and information provided by TFI/NTA, the impact of BusConnects should increase the capacity of the bus services along the corridors and key routes by approximately 25%.

During the AM peak period this would increase the inbound bus capacity on services stopping within 300m of the site from 7,007 passengers to 8,759 passengers.

Luas (light rail tram) Network

The Luas provides a high frequency tram service within the city centre area and suburbs to the south and west throughout the day.

The Red Line, which runs from Tallaght/Saggart in southwest Dublin to the Point Village in the North Docklands, connects with both Heuston and Connolly Station.

The Green Line runs from Broombridge in the Cabra area northwest of the city centre, via the City Centre (intersecting with the Red Line), and via Stephens Green, Dundrum, and Sandyford, to Cherrywood/Brides Glen in south east Dublin.

The Red and Green Lines interconnect at Abbey Street (at O'Connell Street for northbound and at Marlborough Street for southbound).

A schematic map of the overall Luas network is shown in the following Figure 2.5.

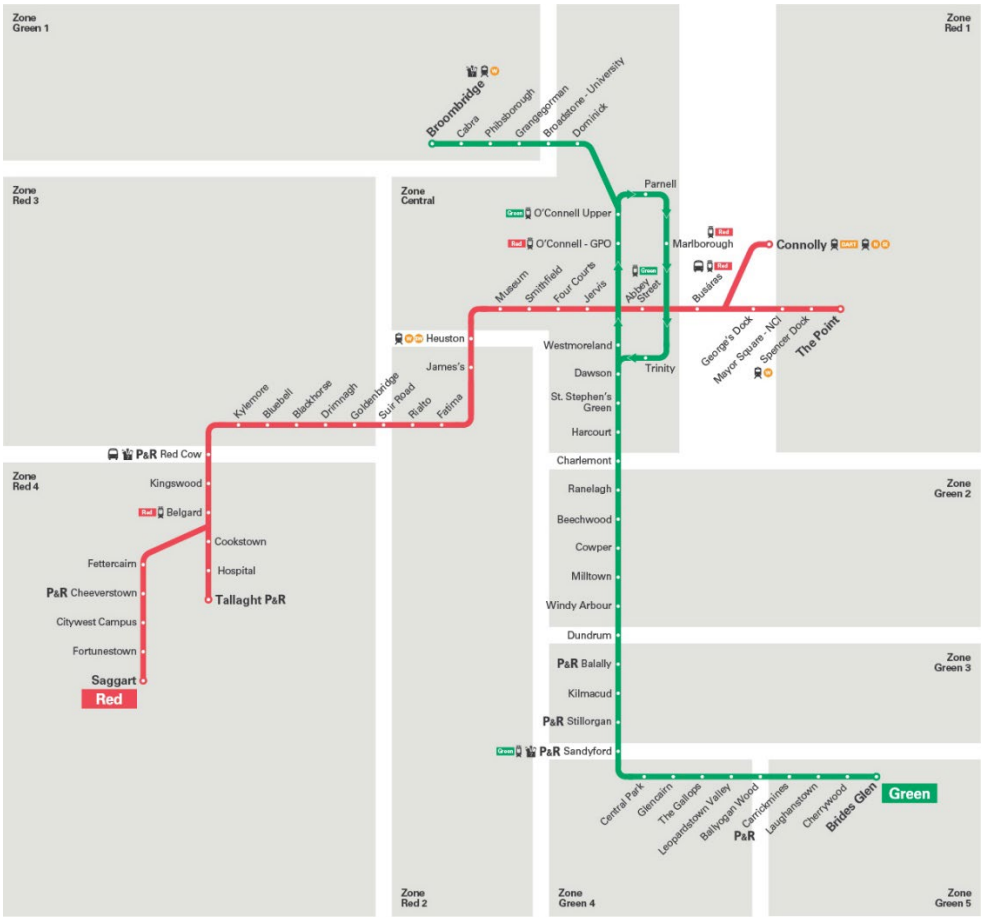

Figure 2.5 Current Overall Luas Network (source: www.luas.ie)

As noted previously, the closest stop on the Red Line is at Fatima (on the south side of St James Hospital) being approximately just under 650m (via Reuben Street) from the proposed LRD access.

The Green Line is further from the site to the east (minimum walk distance is 2.2km to Stephens Green stop) or alternatively the Green Line can be accessed via a walk to the Red Line at Fatima and interconnecting on the north side of the City Centre to reduce the walk to 650m. This is the most effective way of accessing the Green Line if travelling on the northern part of the route (north of the Liffey) shown in Fig 2.6.

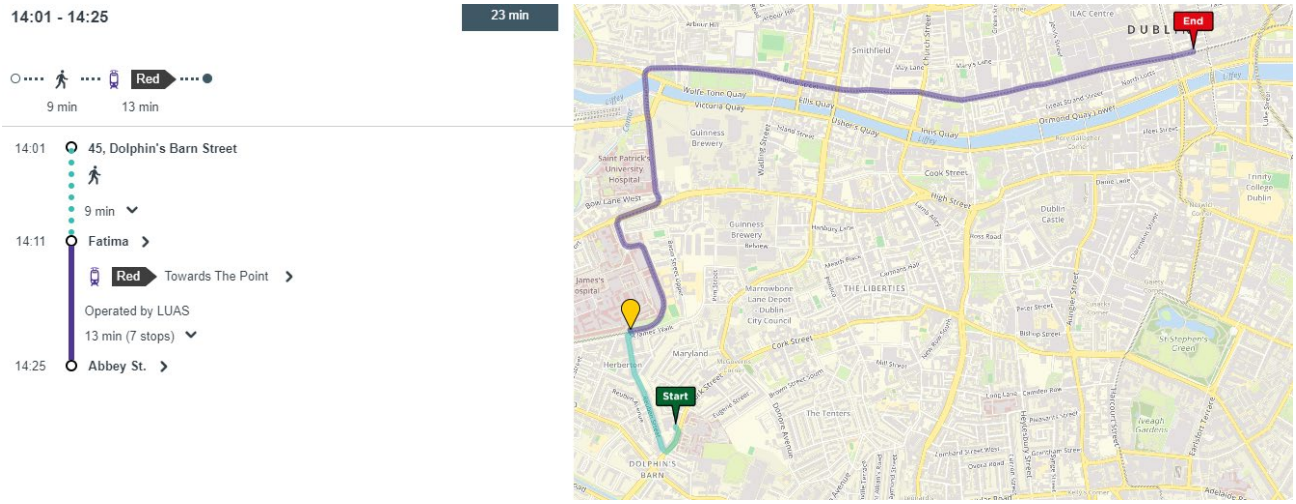

Figure 2.6 Existing Connectivity from LRD site to Luas Green Line at O'Connell St (source: TFI)

However, if travelling on the southern section (between Stephens Green and Cherrywood) a more effective way of accessing the Green Line is to catch the No.122 bus on SCR, which reduces the walk to a 3 minute (260m) walk at each end of a 9-minute bus journey, accessing the Green Line at the Harcourt Stop and avoiding the cross-river section (See Fig 2.7).

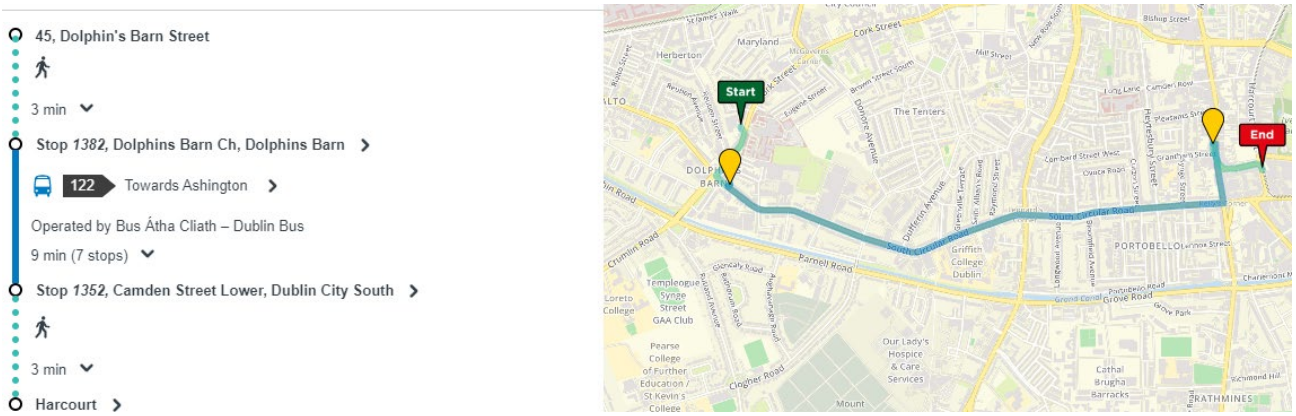

Figure 2.7 Existing Intermodal Connectivity from LRD site to Luas Green Line at Harcourt (source: TFI)

Taxi

Being located close to the city centre and opposite The Coombe Hospital with bus lanes serving the area the LRD site is ideally suited for short taxi journeys.

There are a number of online booking apps for ordering a taxi in Dublin.

Live Timetables and Real-Time Journey Planners

As identified in the previous sections, the TFI 'Plan a Journey' website and Smartphone App and the 'Moovit' website and smartphone App based services both allow an individual to enter origin and destination locations and get options and suggested routes for travel by public transport, including departure times from stops, transfers between modes and walking times between node points on the journey.

These journey planners also allow the user to select a real-time (depart now) or planned journey (depart at selected time or arrive at selected time i.e. for work start or end times) and check on current status of services including alerts on service changes or disruption due to incidents, road closures, public holidays etc, allowing the user to change their planned route based on real-time.

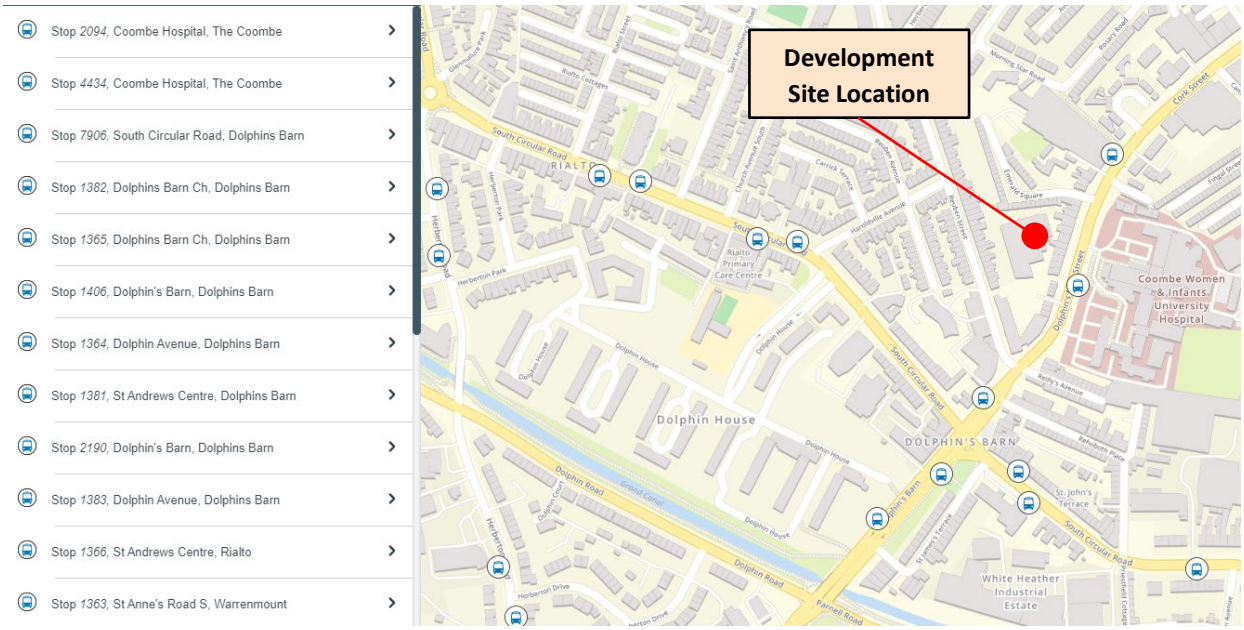

Figure 2.8 TFI Bus Stops located on Dolphins Barn Street and South Circular Road near LRD site (source: www.transportforireland.ie)

The services are constantly updated to take account of network changes such as incoming BusConnects projects, or in the event of temporary service disruptions or industrial action.

Live timetable information including route position of bus services also improves reliability and planning a public transport journey (see Fig 2.9 for example of live timetable and mapping for a No.74 bus approaching stop 4434 on Dolphins Barn Street - inbound from Dundrum Luas toward Eden Quay).

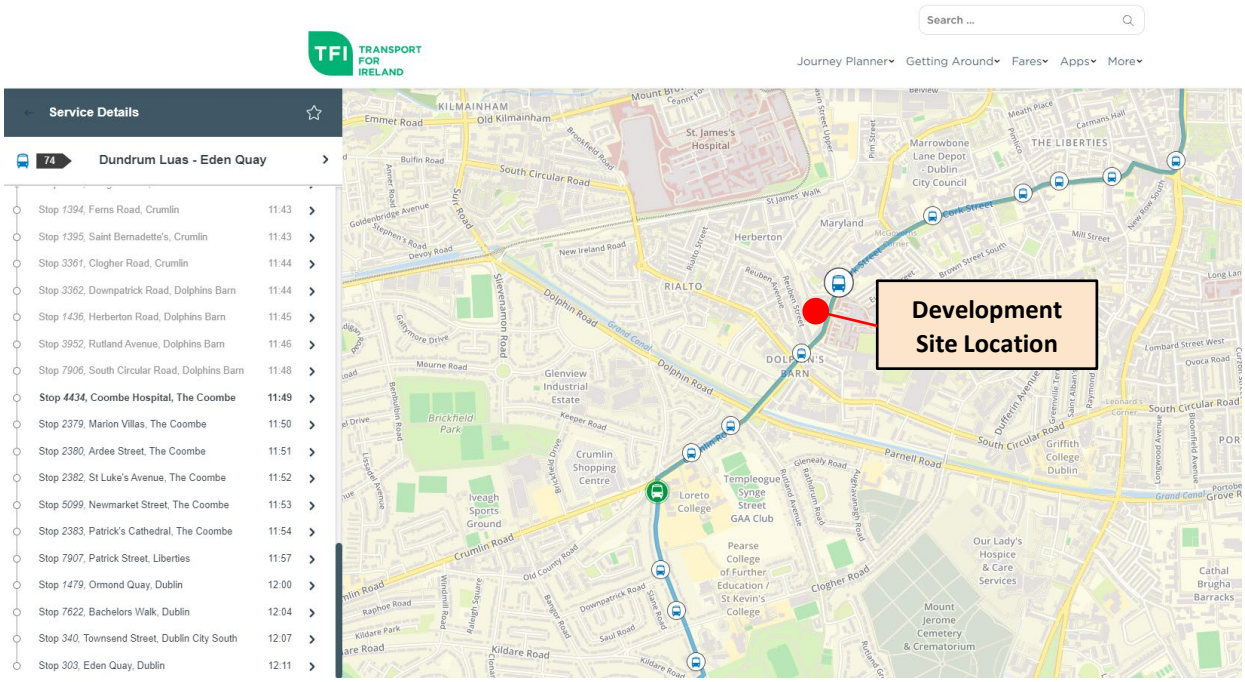

Figure 2.9 Example of TFI Live Timetable and Route for No.74 Bus Showing Real Time Location in green and highlighted location of Stop 4434 (source: www.transportforireland.ie)

3 PROPOSED DEVELOPMENT

3.1 GENERAL

The redevelopment of a site formed by Nos.43-50 Dolphins Barn Street and the associated former factory building to the rear is a Large-Scale Residential Development scheme comprising 119no. apartments (70 no. 1 bed units, and 49 no. 2 bed units), and community hub uses in two ground floor units totalling 523sq. m GFA.

The proposal provides a total of 15 no. car parking spaces (1% accessible & 33% EV charging, which are to be allocated as follows:

- 12 no. standard spaces (residents)
- 1 no. car sharing space (residents)
- 1 no. standard space (community hub use)
- 1 no. accessible/disabled space (community hub use)

Cycle parking is to be provided within the curtilage of the site as follows:

- 172 no. secure bicycle parking spaces for residents
- 60 no. visitor bicycle parking spaces,
- 2 no. community hub long stay bicycle parking spaces (staff) and 6 no. community hub short stay bicycle spaces (visitors)

All cycle parking is provided at ground floor level.

It is intended that the completed scheme will be managed and operated by The Iveagh Trust who will select appropriate people from the housing list to live as tenants in the development.

3.2 DEVELOPMENT ACCESS

The proposal includes a 4.8m wide vehicular entrance from Dolphin's Barn Street, with an adjacent separate 2m path for pedestrian and cyclist access. There is a setback gate arrangement to control access into the inner courtyard area, with the location of the inwards opening vehicle gate setback 9.5m from the building line allowing for a refuse vehicle to stop between the gate and the back of the public footpath on Dolphins Barn Street so that there is no blocking across the footpath when a service vehicle is entering or exiting.

The site layout, vehicle, cycle and pedestrian access, bin store access arrangement and resident and visitor cycle parking locations are illustrated on the C+W O'Brien Architects site plan drawings submitted with the application.

The internal roadway and footpaths within the proposed LRD site have regard for the current Design Manual for Urban Roads and Streets (DMURS), and the layout has consideration for appropriate vertical profile and gradient within the site and at stepped and ramped access points to ensure Part M compliance for walking accessibility. The design will result in a low-speed environment within the site between the access gate and the car parking spaces and has regard to the limited car parking/low volume of vehicle movements generated and priorities pedestrian and cyclist circulation routes within the development.

The existing buildout/parallel car parking, and the crossover area which is in front of the existing vehicle entrances (No.43 and No. 50 Dolphins Barn Street) will be have been re-ordered slightly as part of the proposed site development works to tie in with the proposed position of the access on the proposed building frontage (the new crossover access will be in front of the existing No.49/50 Dolphins Barn Street), which will require minor works) and the kerbline alignment from the buildout zone at the existing Toucan crossing will be extended southwards across the proposed access crossover to tie-in with the buildout that brackets the parking spaces to the south of the access.

The more southerly crossover outside No.43 will become redundant and the footpath/kerb will be raised to match the existing path to each side.

The Tallaght/Clondalkin to City Centre BusConnects scheme drawings have been reviewed as part of the design development and it is noted that while the proposed LRD building line is to the back of the existing footpath and will not impact on the delivery of the proposed scheme, there should be liaison at an appropriate time between the BusConnects Project Team, DCC RMS and the LRD Design Team on the interface of the repositioned crossover access to ensure all tie-ins in terms of streetscape and material finishes are addressed and consistent.

Further to requirements of DCC , refuse vehicles will enter the site and refuse collection would be undertaken from a turning head within the development of a managed strategy agreed between The Iveagh Trust and a refuse collection company with a full Waste Management Strategy by AWN submitted with the LRD application.

The fire consultant has confirmed that Dublin Fire Brigade vehicles will not be required to access the site and can operate from Dolphins Barn Street in the event of a fire emergency call out, although it is noted that the access for refuse vehicles could also accommodate a fire tender or ambulance entering the site.

The exact details of the controlled vehicle access including automated inward opening gates (which will be operated by an ANPR and keyfob system) are provided on the C+W O'Brien Architects drawings.

3.3 Car Parking

As previously noted, there are limited car parking spaces proposed within the development, and these will be accessed from the gated entrance on Dolphin's Barn Street (12 standard spaces and 1 car share space are related to the residential apartments, and 1 standard space and 1 accessible space are for the community hub use). All spaces will be managed – residential parking will be allocated by The Iveagh Trust while the community hub spaces will be pre-booked/allocated for staff or blue badge visitors who have made a prior arrangement with the management).

It is noted that there is likely to be an element of visitor parking demand associated with the apartments. From a review of the supply and demand for on-street parking in the vicinity of the site, it is considered that there is adequate kerbside parking including controlled parking on Dolphins Barn Street and surrounding streets to accommodate these occasional short-stay demands.

As noted by DCC in relation to other similar developments recently planned in the City area, the end-users of city centre residential developments are typically 'self-selecting' and are likely to elect to live in a City Centre area due to its location within a central area of the City with good public transport provision and accessibility by non-car modes to nearby amenities. As such, private car ownership/parking will often not be a key factor for them.

The end-user demographic for the proposed apartment development is persons from the social housing list and therefore the car ownership/resident parking demand can be managed by The Iveagh Trust through lease agreements and allocated on specific need.

In addition, SRC notes that there is an letter of support by Driveyou (appended to this Plan) to provide a vehicle to be parked in an allocated car-club space within the curtilage which will be specifically for the tenants of this development by The Iveagh Trust.

Residents of the development who hold a valid driving licence will be able to rent the vehicle (the rental cost (per hour/per day) includes a fuel/mileage allowance, tax and insurance.

A number of recent studies and research papers have indicated that car club schemes can replace between 10 and 15 cars per car club vehicle serving a development.

Therefore, the provision of a car club vehicle for this development can clearly facilitate an offset in car parking provision for this site by residents who may occasionally wish to use a car for a short period but without the need to own a car.

As apartment scheme residents cannot apply for an on-street parking permit it is not considered that there will be an issue of residents who do not have an allocated space within the development opting to own a car and park on-street, with parking spaces in the area generally controlled through period from 07.00-19.00 (Monday-Friday), at €2.00/hr with a 3hr maximum stay, which is considered to be adequate to deter long term/all day parking.

The Community Hub uses are to serve the development and the local area, and therefore dedicated visitor car parking is not required, but it is expected that there could be a need for a disabled accessible space and also a reserved space for a staff member who may be accessing multiple sites during their working week and need convenient on-site parking.

3.4 Cycle Parking Provision

The Development Plan requirement is 1 space per bedroom plus 1 visitor space/2 units, equating to a Development Plan requirement for 162 residential (long-term) spaces for 70 x 1-bed and 49 x 2-bed units and 60 visitor (short-stay) spaces.

For the community hub use, the requirement for is 1 space/5 staff and 1 space/100 sqm GFA, equating to a minimum requirement of 2 staff spaces and 5 visitor spaces.

There are 172 secure cycle parking spaces proposed for residents in bike stores within the development at ground floor level – these are accessed from the internal path and roadway. These spaces will have a double-stacking system with pneumatic assisted lifting operation.

In addition to the long-term resident spaces, a total of 60 spaces are proposed for visitors to the residential units, provided in Sheffield cycle parking groups.

There are also 2 no. community hub long stay bicycle parking spaces (staff) and 6 no. community hub short stay bicycle spaces (visitors).

Three of the cycle parking spaces are for adapted/cargo bikes.

Please refer to C+W O'Brien Architects drawings and Design Statement for details of the proposed cycle provision including layout and operation of stacking system.

3.5 Proposed Pedestrian Accessibility

The main pedestrian access point into the development is adjacent to the vehicle access, with an inward opening gate controlled by a keyfob/swipe card and an intercom system for visitors.

There is a main pedestrian entrance to the apartments including an entrance vestibule area providing access to the lift core and a location for apartment letterboxes, on the Dolphins Barn Street frontage of the development, to the south of the vehicle and pedestrian access gates.

There are also separate controlled access doors into the community hub uses from Dolphin's Barn Street so that pedestrian visitors can access these uses directly from the public footpath without entering the inner area of the development (these will only be accessible during the hours that the community hub is operational).

As the site is located on the Dolphins Barn Street where there are relatively wide footpaths with a minimum width of 3m (increasing to almost 6m at areas where there are buildouts between the sections of parallel parking and the crossing point) the quality of the pedestrian access to the site is good.

There is also good accessibility to the surrounding environs with dedicated pedestrian provision, entry treatment ramps and dropped kerb crossing points at side road junctions.

It is noted that just north of the site frontage there is a Toucan crossing to connect to the eastern footpath and outbound bus stop outside the Coombe Hospital, and a further Toucan crossing 75m to the south of the site, in front of the Earls Court development. There is also dedicated pedestrian crossing provision at the traffic signals junction with South Circular Road 150m to the southwest of the proposed LRD.

Within the site there are footpaths connecting to the building entrances and the bike store/bin store accesses and car parking area that is located in the north west corner of the ground floor site layout.

3.6 Site Servicing/Emergency Services

Typically, this type of development generates very few servicing movements. Refuse collection arrangements and times will be agreed between The Iveagh Trust and a contracted refuse collection company with the larger 1100L 'Eurobins' brought out from the bin stores to the collection point at the turning head within the development by the operator.

There are public parking bays on Dolphins Barn Street which would facilitate temporary stopping by occasional delivery vans (i.e. home shopping) but these could also be given limited controlled access to the internal area by development management to drop off at the turning head space.

As set out at Section 3.1, the fire consultant (Knapton Engineering) for the project has confirmed that Dublin Fire Brigade vehicles will not have to enter the site in the event of an emergency call out as there is a dry riser system installed at the building frontage.

4 EXPECTED MODAL SPLIT FOR DEVELOPMENT

4.1 GENERAL

The purpose of this section is to provide an initial forecast of the modal split for the proposed residential development. This should be reviewed in future after the development is fully occupied to provide an assessment of the actual travel demands and patterns, so that the measures can be adjusted, where necessary.

It can be seen from the following graphic from the Dublin City Centre Transport Plan 2023 that there are targets for increasing the share and proportion of public transport and Active Travel modes while significantly reducing private car vehicle trips in the next few years.

Figure 4.1: Trip Making by Mode in Dublin (Source: *Dublin City Centre Transport Plan 2023 Technical Notes - Part 5: Cycling Figure 3-4: Dublin Mode Share Analysis – 2019 and 2028*)

4.2 LOCATION OF AMENITIES WITHIN REASONABLE WALKING/ CYCLING DISTANCE

It is noted from the appended walking catchment map that the site is well located to provide walking access to the south side of Dublin City Centre, various large amenities/employment campuses (such as St James Hospital, the future National Children's Hospital and The Coombe Maternity Hospital), and several schools, with local retail uses nearby on Dolphins Barn Street (Spar) and Cork Street (Centra and Lidl), all within 300m, and Dunnes Stores at Crumlin Road approximately 1km from the site.

There are other sites beyond what would be considered a reasonable walking distance but are clearly within a reasonable cycling distance (within 5.0km) as shown in the appended cycle catchment map.

Brickfields Park is approximately 1.25km from the LRD site, so it is within walking/jogging or cycling access and is also accessible by bus. There are a number of sports clubs with pitches at the park and there is a parkrun event (a free, timed 5k walk, jog or run) which operates on Saturday mornings.

Within the development there are communal open space areas with gardens, play areas and seating, where residents and their visitors can socialise with their friends and neighbours.

4.3 Expected Mode Share for Resident Population

The development is to contains 70 no. one-bedroom apartment units and 49 no. two-bedroom units, which could equate to up to 336 persons, if using a maximum loading ratio of 2 persons/1 bedroom unit (i.e. 2 bedspaces/unit) and 4 persons/2-bedroom unit (i.e. 4 bedspaces/unit). Although it is likely there will be some single person occupants of one-bedroom units, the use of a maximum occupancy loading in this report provides for a robust assessment.

It is recognised that only some of the adult residents would be working and/or commuting from the development on a typical weekday, and not all the children within the development would be of school/college age and travelling to educational facilities each term-time morning.

Also, in addition to non-working adults, there could be an element of home workers, and shift workers/part-time workers (who travel at non-peak times) within the total adult population.

The volume exiting from the site is likely to be in the order of 0.98 persons per unit during the AM peak period (07.00-10.00), based on TRICS rates for local authority/housing association apartments with limited on-site car parking, of which 0.535 persons per unit (54% of the total exiting) depart during the 08.00-09.00 'peak hour' i.e. a total of 116 persons would be departing across the period, of which 63 persons are departing during the 08.00-09.00 'peak hour'.

As there is limited car parking provision the car driver share will clearly be low, and from the TRICS rates the vehicle departures over the 07.00-10.00 period will be 0.141 vehicles/unit, or which 50% occurs during the 08.00-09.00 peak hour. This equates to 17 vehicles departing during the period, and 8.4 vehicles (i.e. 8) departing during the 08.00-09.00 peak hour.

As there are only 12 standard spaces allocated for residents, clearly not all of the departure vehicle trips are by vehicles starting from within the site, and this is because there will be an element of the residential population who are picked up/dropped off by a colleague/relative etc who is living elsewhere and making a pass-by or diverted trip on-route, or by taxi. Therefore, the volume of vehicles exiting from the development car parking area through the access gate will be lower than the total departing from the site.

With a standard average car occupancy rate of 1.2 persons per vehicle departing, there would be a total of 20.4 persons (i.e. 21 persons, or 17.8% of the total persons departing during the AM peak period) who depart in vehicles which are either driven out of the car park, or persons picked up by other drivers arriving to the site from elsewhere/taxis), being an aggregate total of both car drivers and car/taxi passengers.

There will be 172 secure cycle parking spaces on-site for residents. It is expected that the actual demand on a day-to-day basis will be lower due to walking and public transport opportunities. Therefore, regarding the number travelling during the AM peak it is expected that 30% of the 116 departing residents will use their own cycle to travel from the site each AM peak period (35 cyclists).

Therefore, the remaining 52.2% of departing residents (60 persons including children) departing during the 07.00-10.00 AM peak period would primarily walk to their destination or walk to nearby public transport.

Having regard to previous similar projects, and the City Centre location, it is considered that approximately half these departing residents including children would be walking for their full journey (up to 30 persons), while the remainder would be walking and using public transport (30 persons).

The public transport share will be a mix of passengers on buses on the R110 corridor (Dolphins Barn/Cork Street inbound, or Crumlin Road outbound), on South Circular Road (eastbound/westbound) or walking to the Fatima Luas stop via Reuben Street).

At this time, without a resident population to provide responses on their public transport journey options and demands, it would be reasonable to assume the greater proportion of the residents commuting by public transport during the 07.00-10.00 AM peak period will use the Dolphins Barn Street stops as these are within 100m of the site and there is a high level of service to these stops as set out at Table 2.1 and Table 2.2, (57 inbound and 49 outbound services over the peak period), with the balance split between Luas Red Line at Fatima stop (45 inbound and 45 outbound services) and the SCR bus routes (20 inbound and 18 outbound services) , broken down as follows:

- Dolphins Barn Street bus stops 67% (20 passengers, 15 inbound and 5 outbound)
- Fatima Luas 22% (7 passengers, 6 inbound and 1 outbound)
- SCR bus stops 11% (3 passengers, 2 inbound and 1 outbound)

At worst case, based on the existing inbound capacity of the Dolphins Barn Street routes, which is 57 buses*91ppv = 5,187 passengers during the AM peak period, the increase of 15 inbound passengers will relate to a 0.29% increase in passenger demand on these existing services at the 4434 stop on Dolphins Barn Street.

These mode share proportions would vary across the day due to the nature of trips made, but as noted the majority of short trips will be made on foot or by bike, with longer trips made by public transport, with an element of car trips including taxi or persons being picked up or dropped off by car (driven by others).

While some visitors to the development may travel by car and park in nearby on-street pay and display parking, it is also noted that with a good level of public transport provision serving the site, provision of secure cycle parking and a large walking/cycle catchment and population reach (see Appendix A) and controlled on-street parking, it is unlikely that there will be any significant parking demand by visitors, but for those who do, there is adequate parking supply to accommodate this activity.

5 TRAVEL PLAN COORDINATOR

5.1 INTRODUCTION

The UK Dept of Transport document 'Making Residential Travel Plans Work' identifies the key elements of the 'travel plan pyramid', with a promotional strategy as the peak element, and a RTP Coordinator to develop further measures and oversee the plan on an ongoing basis.

Fig 5.1: The Travel Plan Pyramid (source: Making Residential Travel Plans Work, UK DoT, 2007)

The Iveagh Trust will appoint a RTP Coordinator to administer implement, monitor and review the Plan issues and objectives within the proposed development.

5.2 THE ROLE OF THE COORDINATOR

This will focus on the ongoing development and updating of the Plan, when the residents are in place and settled into a pattern of activities and travel/accessibility needs, and in response to changes in transport infrastructure, policies, and services. The tasks will address the following key aspects, where relevant to this development.

Information

This will include updating information packs for new residents and managing web-based or fixed notice boards/displays where this could affect daily travel requirements (i.e., in case of route changes due to ongoing BusConnects project delivery/public transport industrial action), including advising residents of the use of the TFI and Moovit Journey Planners.

Health Benefits to Residents

The updates to the Plan will provide information on health and mental wellbeing benefits for cycling and walking and establishing the demand for occasional cycle user group or bicycle maintenance workshops, where cyclists can meet to discuss issues and gain enhanced proficiency in cycling in the urban network or in carrying out routine maintenance to ensure their bicycle is also in good health.

Financial Benefits to Residents

Awareness of use of Leap-Card or DublinBikes membership cards to use the DublinBikes will also be provided as part of the information circulated by the RTP Coordinator.

For residents under 66 who are in work, the Taxsaver scheme would also be available through their employer.

Everyone aged 66 and over, legally resident and living permanently in the State, is entitled to the Free Travel Scheme. Some people under 66 also qualify.

In some cases, a Free Travel Companion Card is available which allows a person to travel with the holder (if they are unable to travel alone). Free Travel Cards are non-transferable and can only be used by the named person.

Free travel is available on all State public transport (bus, rail, and Dublin's LUAS service) with some exceptions.

Ongoing Liaison

The role of the RTP Coordinator will also involve liaison with DCC and/or the NTA 'Smarter Travel' section, public transport companies, the car club operator and where appropriate tie-in with other initiatives to blend measures where these are mutually beneficial, and by providing feedback to the management company.

The RTP Coordinator will also be a key point of contact for residents who have queries on travel options or concerns (such as safety or security in the area or on specific routes. which can be put forward to the appropriate section in DCC, the transport operator or An Garda Síochána, as applicable.

This role would also intercede where specific accessibility needs arise.

Stephen Reid Consulting Traffic and Transportation

Driveyou Car Sharing at 43-50 Dolphin's Barn Street, Dublin 8 – Letter of Support

To whom it may concern,

Driveyou car and van sharing have met with representatives of The Iveagh Trust who are the Applicant for the proposed Dolphin's Barn Street residential development and have discussed the possibilities of creating a car sharing location for use by the residents of the development.

Driveyou have assessed a number of criteria around the particular development and confirm that we would look to add a car sharing location on site with a minimum of one passenger type car.

Car sharing is a sustainable alternative to car ownership. Many users appreciate the fact they create less emissions by not owning their own vehicle but instead use a shared car if needed, their primary mode of transport is by public transport, by foot or on bicycle.

Many households look to reduce car ownership from two to one where possible which in turn reduces their carbon footprint whilst simultaneously reducing overheads (cost of car ownership, finance, maintenance and insurance). The main assisting factor in this is convenient and reliable car sharing services on your doorstep.

Driveyou looks forward to offering a car sharing service to the future residents at the Dolphin's Barn Street development.

Please don't hesitate to contact me if needed,

Yours sincerely,

Robert M
